ISOM’09 Optical Memory Application Roadmap Report

Publication of ISOM optical memory application roadmap

The ISOM steering committee published the ISOM optical memory roadmap report in 2006. This roadmap report focused on the future technologies. During the promotion for this roadmap, we were strongly requested to make an application roadmap. In order to respond to the strong demand, we have investigated what field we can apply optical memory technologies to for two and a half years.

We will present the results in the application session of ISOM’09 on **October 7**. Since we will have to continue to work until the very last minute, the Optical Memory Application Roadmap Report is to be published on **October 6**, which is just one day before the special session.

◆ Contents ◆----------

1. Background, aim, and procedure of making the application roadmap.
2. Process and results of making the roadmap related to audio/visual fields.
3. Process and results of making the roadmap related to archive fields.
4. Process and results of making the roadmap related to emerging business fields.

◆ Price： 5,000JPY

◆ Distributed day：**October 6 and 7 (two days only)**

◆ How to order：All you need to do is check the left box of the "Application Roadmap Report" on the Participation page of the ISOM’09 Registration.

Please participate in the ISOM’09, get this publication, and attend the special session.
Those who wish to attend ISOM'09 should access to **ISOM website (http://www.isom.jp/)**, where the procedure of the registration is described.
