Do you have any suggestions on how to improve the workshop:

- Workshop material should be made available prior to the workshop
- This type of program should be held regularly
- If the goal, objective and outcome can be communicated to participants early to prepare for the workshop
- The individual presentations gives an indication that in future workshops additional time should be devoted to components of research proposals in terms of what is required
- If a simple case study can be discussed before the individual programme areas
- The training presentations to be made available immediately after the course
- Next time groups should be formed by facilitators so that groups from different areas will mix
- Nice and educating programme – Bravo !
