Employment History

Elevator Interior Design

<http://www.elevatorid.com/>

System Administrator

June 2011 – Present

Designed and developed the website (www.elevatorid.com) and all marketing material including HTML emails and brochures. Developed content and website structure with SEO in mind. Improved the website and marketing materials using Google Analytics data. Provided IT support onsite and remotely. Developed graphics for print and web, including design brochure and email marketing templates. Managed email marketing program using Constant Contact. Designed web apps for use in house across intranet, including unique job number generator and a program to scan a directory of excel files and dispatch emails based on included dates.

ASM Retro

<http://www.asmretro.com/>

Owner & Operator

June 2012 – Present

Designer and developer for the website (www.asmretro.com) including all marketing materials and social media account (Instagram and Facebook) content. Handled all internal operations such as stocking materials and packing & shipping products. Contributed to product development by designing graphics and collaborating on software development. Kept up to date with homebrew embedded development culture and events to expose opportunities for new products, improving current products, and effective marketing strategies.

STREEM Real Estate Management App

March 2014 – Present

Contract: Lead PHP Developer

Designed and developed an application to manage real estate maintenance requests via mobile and desktop. Worked in a small team of three with one other designer and mobile developer. Developed all desktop models and controllers as well as logic for the lifecycle of a maintenance request object. Continuing development to include a rent payment feature.

The Banjo Project: Interactive Timeline

January 2014 – Present

Contract: PHP Developer

Designed and developed an interactive timeline to display text, audio, and video relating to the history of the banjo as an instrument. Contracted by Professor Marc Fields of Emerson College. Prototype built using ExpressionEngine for quick CMS interface changes.

Hobbies & Interests

Freezeframe.js

Open Source jQuery Plugin

Freezeframe.js is a script that automatically pauses animated GIFs and enables them to start animating on mouse hover using the HTML5 canvas element.
