

Celsius to Fahrenheit Chart For Nurses

To create a Celsius to Fahrenheit conversion chart specifically useful for nurses, let's focus on a range that covers typical human body temperatures. This chart will include temperatures from 35°C to 42°C, which correspond to 95°F to 107.6°F, encompassing normal, febrile, and hypothermic ranges.

I'll calculate the Fahrenheit equivalents using the formula:

$$F = (C \times 1.8) + 32$$

Let's create this chart.

Here's a Celsius to Fahrenheit conversion chart for nurses, covering typical body temperature ranges:

Celsius (°C)	Fahrenheit (°F)
35	95.0
36	96.8
37	98.6
38	100.4
39	102.2
40	104.0
41	105.8

42	107.6
----	-------

This chart spans from normal to febrile body temperatures, providing a quick reference for converting temperatures from Celsius to Fahrenheit.
