

## Dot Addition

**Materials:** Dot Addition Cards (20 dot cards),  
Dot Addition Board, sheet of paper

**Players:** 1–3

**Object:** Use combinations of dot cards to  
make the numbers on the board.

### How to Play

1. Lay out the 20 cards faceup in four rows of five. Place the board beside them.
2. Work together to make each number on the Dot Addition Board with your cards.
3. You can't use a card twice. For example, if you use three 3's to make 9, you can't use all 3's to make 12.
4. You may rearrange your cards at any time until you have made all the numbers on your board.
5. At the end of the game, write the number combinations you made on a sheet of paper.

### Variations

- a. Play again with the same board. Find a different way to make each number with the cards.
- b. Make your own Dot Addition Boards.

#### Note to Families

You may use any of several Dot Addition Boards that your child may bring home. Although only four cards fit across the board, it's OK to use more to make a number. Just overlap them or let them go off the board.
