## ***Executive Summary***

This report describes the job task analysis (JTA) study for the Certified in Homeland Security, CHS® Levels I, II, and III (CHS-I-III) exam offered by the American Board for Certification in Homeland Security, CHS® (ABCHS). This examination is designed to identify candidates with minimal knowledge and skills to earn the entry-level (previously first through third level) credential in the Certified in Homeland Security, CHS® certification program. ABCHS contracted Assessment Systems Corporation, a leading provider of software and services for testing organizations, to provide psychometric consultation in the study.

Three lists of tasks were generated by a panel of experienced homeland security professionals. Each list corresponded to one of three Certified in Homeland Security, CHS® (CHS) levels (I-II-III), with an overall structure as defined by a panel of subject matter experts. These lists were used to create three surveys regarding the importance and frequency of each task. Between 151 and 341 professionals completed the surveys, providing empirical information regarding which tasks are most important and are completed most often. This report provides detail on the methodology and results of this survey. A later report will describe the conversion of these results into detailed test specifications.

## ***The Validity Argument***

**Validity** refers to whether there is evidence to support given interpretations of test scores. The modern conceptualization of validity views is from an argumentative perspective (Kane, 1992; 2004). That is, the testing organization must present a chain of evidence in support of an argument for the intended use of a test. Professional credentialing tests rely on **content validation**; that is, the primary link in the chain is to establish that the content of the test is appropriate.

In the case of professional certification testing, the intended interpretation is that someone who passes the test has a certain level of knowledge and skill required to do a job adequately. We must therefore provide a chain of evidence from the test scores back to the job itself. The first step in the chain is the job; we must perform an empirical analysis of what the job entails in order to adequately design a test to assess skills for the job. This is known as **job analysis** or **practice analysis**. Standard 10A of the National Commission for Certifying Agencies (NCCA), which accredits certification testing organizations, states:

A job/practice analysis must be conducted leading to clearly delineated performance domains and tasks, associated knowledge and/or skills, and sets of content/item specifications to be used as the basis for developing each type of assessment instrument (e.g., multiple-choice, essay, oral examination).

Job analysis is also described by the *Standards for Educational and Psychological Testing* (AERA, APA, NCME, 1999). Chapter 14 covers testing for employment and credentialing, and Standards 14.8 through 14.14 discuss the need for content validation and the role of job analysis. For example, Standard 14.14 states:

The content domain to be covered by a credentialing test should be defined clearly and justified in terms of importance of the content for the credential-worthy performance in an occupation or profession. A rationale should be provided to support a claim that the knowledge or skills being assessed are required for credential-worthy performance in an occupation and are consistent with the purpose for which the licensing or certification program was instituted.

The content validation approach is appropriate for credentialing because the intended interpretation of test scores is merely that a person is qualified to perform the job. This is contrasted to **predictive validation**, where the goal of the test is to predict a continuum of job performance. For example, selection tests are often validated by correlating test score with ratings of job performance, in hopes that scores on the test will predict better job performance and therefore can be used to select better applicants. Credentialing tests demonstrate that someone has the basic knowledge and skills to perform adequately, so validation focuses not on top performance, but rather on determining the span of knowledge and skills.

To provide a psychometrically sound foundation for the development of a CHS-I-III certification test, a job analysis study was conducted for ABCHS. This report details the design and results of this study, and the implications for test design.

## ***Study Design***

There are several designs available (Brannick & Levine, 2002) for a job analysis study; a model commonly used for credentialing exams is a **task inventory** (Raymond & Neustel, 2006). The goal of this approach is to produce a comprehensive list of professional tasks performed on the job, then have a wide range of incumbents rate each task on aspects such as **importance** and **frequency** or **time spent** on the task in a normal work week. This provides empirical evidence as to which tasks are more important or more frequent in the job; those tasks should obviously have more weight on the final test than rare or unimportant tasks. Documentation of this process substantially enhances the validity of score interpretations from a certification exam.

The following presents an overview of the steps in the study methodology.

1. Develop test definition and broad outline to provide the initial link in the validity chain
2. Generate exhaustive list of task elements and knowledge areas of the profession
3. Review task and knowledge list
4. Develop rating scales for task and demographic questions to assess sampling
5. Publish and deliver survey with sampling plan

The development of the CHS-I-II-III job analysis survey instruments began with an email distributed to all with current CHS credentials requesting a list of homeland-security job tasks that a minimally competent candidate could perform successfully. Responses were collected by ABCHS Staff, and the ABCHS Executive Committee vetted them and checked to ensure exclusivity from tasks rated on CHS-IV and CHS-V JTA surveys.

During a meeting of the ABCHS Examination Development Committee on February 24-25, 2011 held near ABCHS headquarters Springfield, MO; a psychometrician from Professional Testing Corporation (PTC, a previous ABCHS consultant) led the SMEs through the next stage in the development of the job analysis survey. The examination committee members who attended were Eric White (Chair), Dave Johnson, and Janet Schwartz. All of the Examination Committee members are also Diplomates and/or Fellows of ABCHS, holding a current certification in this examination. Marianne Schmid and Jared Crabtree (ABCHS staff) also attended the meeting.

During the meeting, Staff assisted SME work in reviewing then collating received task statements into functional areas. Not all tasks were collated at this time, so this work continued immediately following the meeting in Springfield.

Within weeks, all 200+ received tasks were collated into functional categories. The functional task areas were evaluated with regard to the structure of the profession and the entry-level role to ensure both adequate coverage and logical progression. With an adopted task list in place, the Executive Committee matched the functional areas from the list with the first three levels of the CHS credential. Moreover, this process took into account the plan to convert from five certification levels to three certification levels. This was deemed by the Executive Committee to better represent the profession. The current certificant population and organization programs have five levels, but the conversion was planned to move to three levels, combining levels I, II, and III.

This activity yielded a task list for each level. To the CHS-I-II-III credentials, the Committee assigned the following functional areas:

- For CHS-I, Research, Training, and Program Implementation areas were represented by 73 task statements.
- For CHS-II, Preparedness and Assessment areas were represented by 38 task statements.
- For CHS-III, Mitigation and Planning were represented by 55 task statements.

The ABCHS Executive Committee reviewed this final list of task statements and approved it as comprehensive to the field at the entry level.

Next, the scale for the job analysis survey was established. It was agreed that the **Frequency** scale for the tasks would be Regularly, Frequently, Occasionally, and Never. The **Importance** scale would be Extremely, Moderately, Slightly, and Not. These levels are consistent with best practices and with job analyses conducted for higher CHS certifications.

On April 1, 2011, the CHS-I survey was ready and was emailed to approximately 7,308 specialists with current CHS-I certification or higher. The CHS-II survey was delivered through email on April 7, 2011 to approximately 7,307 specialists with current CHS-II certification or higher. The survey for CHS-III was delivered to 7,357 specialists with current CHS-III certification or higher on April 8, 2011.

Many individuals, including ABCHS Executive Advisory Board members, received more than one of these surveys because of the relevance of their credentials and background. They were given a deadline of 3 weeks to respond to each survey. 341 completed CHS-I surveys were received, 207 completed CHS-II surveys were received, and 151 completed CHS-III surveys were received.

Survey results were collected, exported, and analyzed. The results are described in the next section. A later report will describe their development into test specifications.

## Results

A total of 341 professionals completed the CHS-I survey, 207 completed the CHS-II survey, and 151 completed the CHS-III survey. The respondents appear to be a representative sample of those in the field of Homeland Security, as described in the following demographic analysis. This section of the report contains a description of the survey results based on the 10 demographic questions which were asked.

### Demographic Characteristics

#### Gender

The samples were 87.9%–90.0% male and 8.6%–11.1% female. These percentages are fairly similar to the results of the CHS-IV and CHS-V surveys, and represent the relevant population.

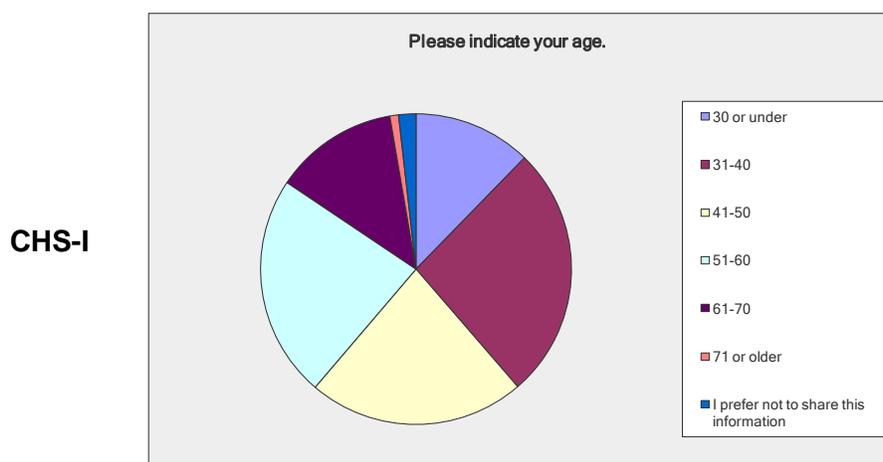

**Table 1: Gender**

Answer Options	CHS-I		CHS-II		CHS-III	
	%	N	%	N	%	N
Male	90.0%	307	87.9%	182	88.7%	134
Female	9.7%	33	11.1%	23	8.6%	13
I prefer not to share this information	0.3%	1	1.0%	2	2.6%	4
<b>answered question</b>		<b>341</b>		<b>207</b>		<b>151</b>
<b>skipped question</b>		<b>0</b>		<b>0</b>		<b>0</b>

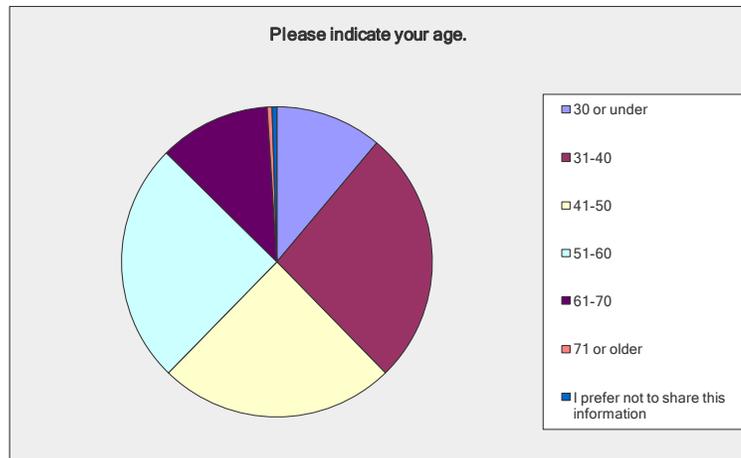

#### Age

The samples included a wide range of ages, appropriately spanning the population of professionals with no oversampling at a given age range.

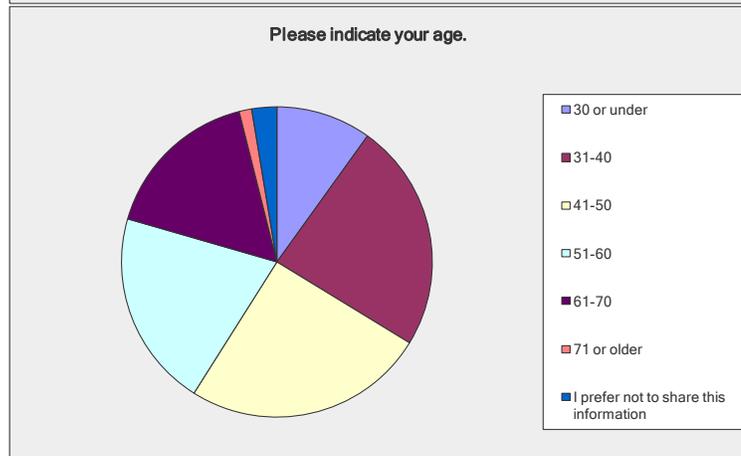

**Figure 1: Age**

CHS-II

CHS-III

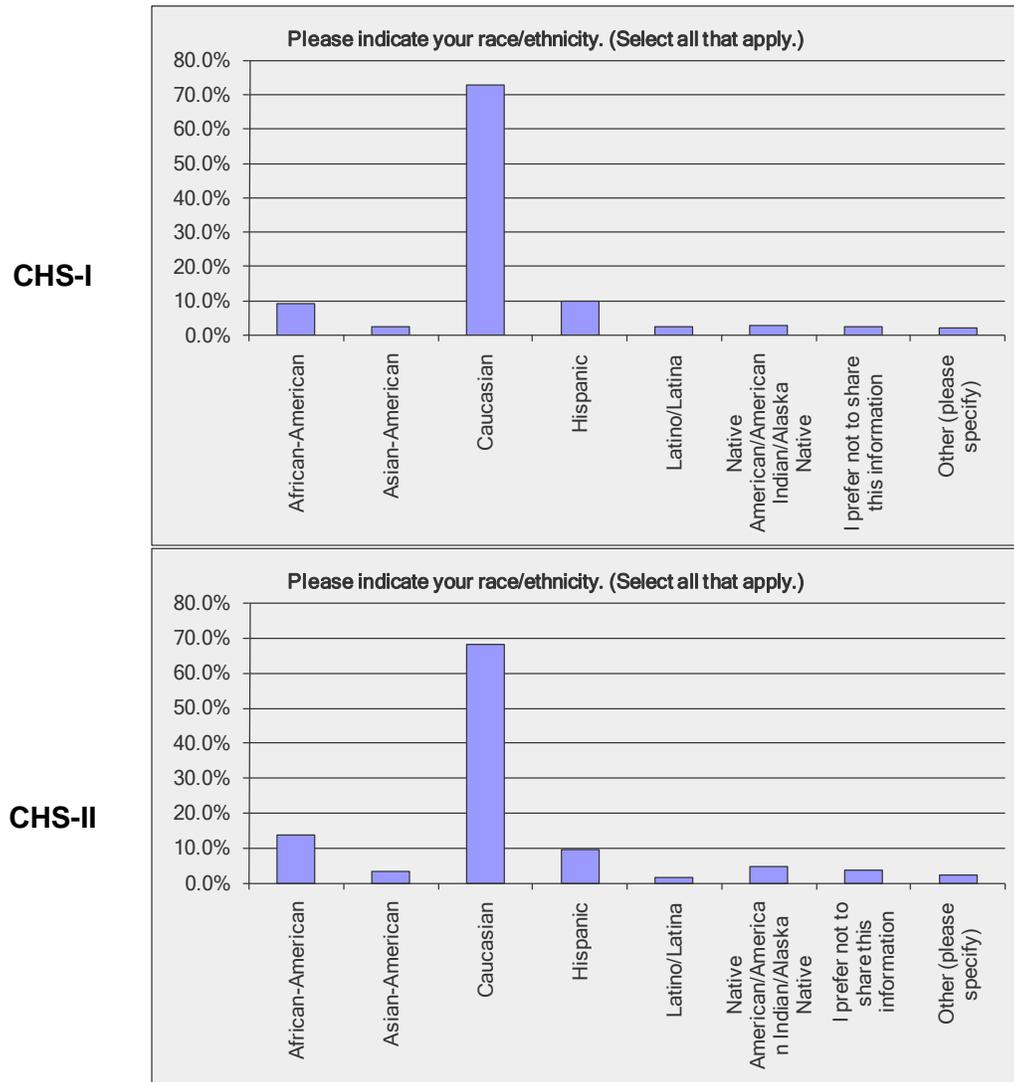

**Table 1: Age**

Answer Options	CHS-I		CHS-II		CHS-III	
	%	N	%	N	%	N
30 or under	12.3%	42	11.1%	23	9.9%	15
31-40	26.4%	90	26.6%	55	23.8%	36

## Ethnicity

The majority of the samples was Caucasian (68.1%–73.0%), and the remainder was distributed among major ethnic groups in the United States, with between 9.1%–14.0% African-American, 9.3%–10.0% Hispanic, 2.6%–3.4% Asian-American, 1.9%–2.6% Latino/Latina, and 2.6%–4.8% Native American/American Indian/Alaska Native.

**Figure 2: Ethnicity**

**CHS-III**

<b>answered question</b>		<b>341</b>		<b>207</b>		<b>151</b>
<b>skipped question</b>		<b>0</b>		<b>0</b>		<b>0</b>

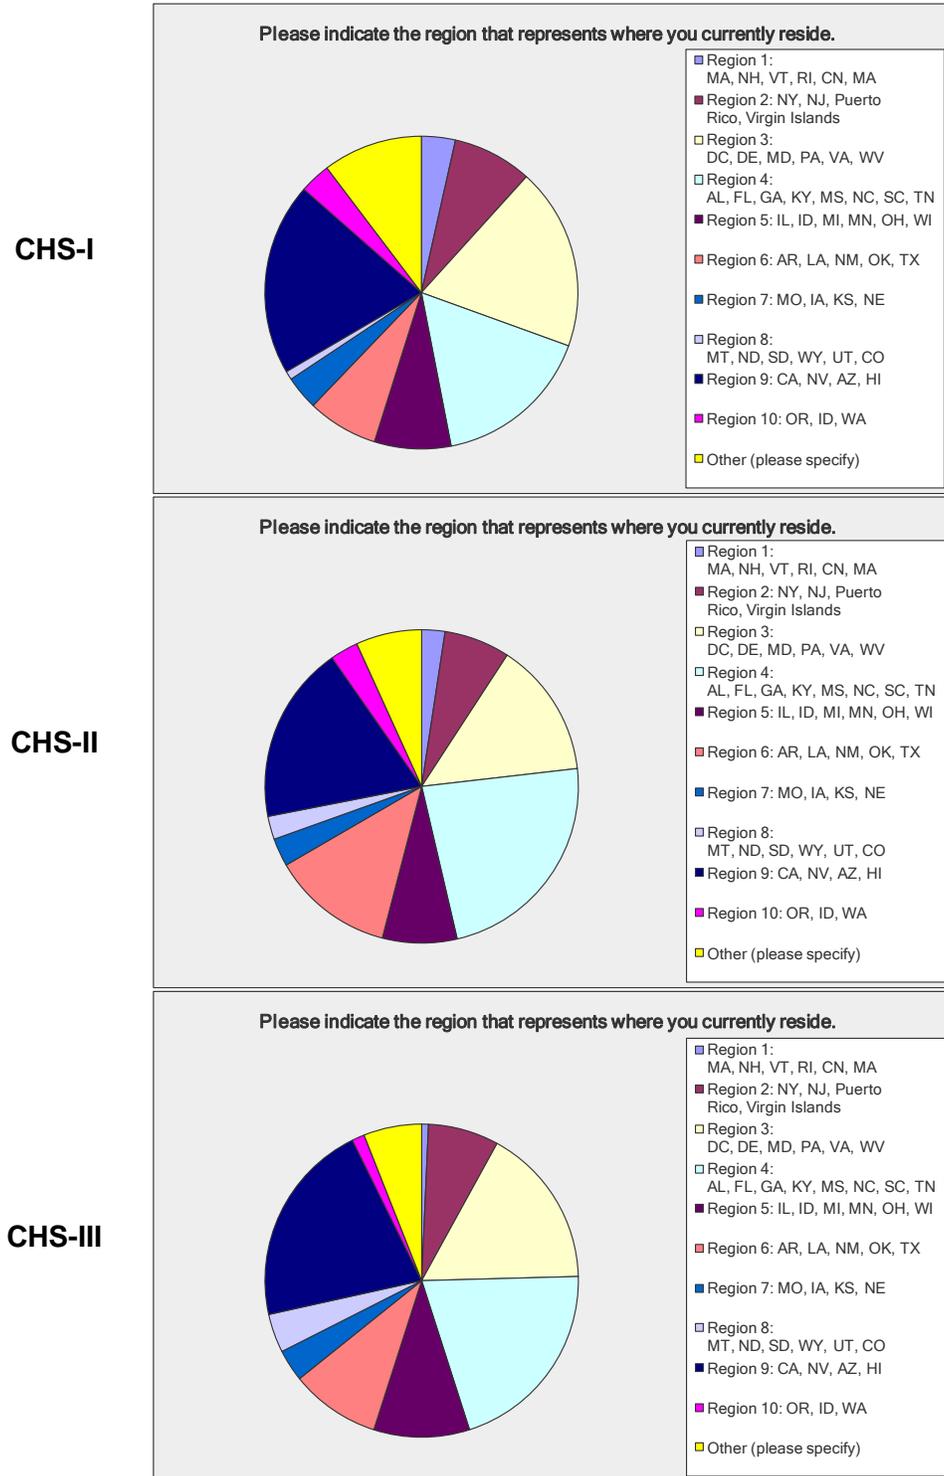

<sup>a</sup> Respondents could select all options that apply, hence the percentages won't sum to 100%.

<sup>b</sup> Mexican and Pacific Islander were not options for the CHS-I and CHS-II surveys

## Geography

The survey respondents came from across the United States, though the largest percentages came from Region 4 (16.4%–23.2%), Region 9 (18.4%–21.2%), and Region 3 (14.0%–18.8%).

**Figure 3: Geography**

<b>answered question</b>		<b>341</b>		<b>207</b>		<b>151</b>
<b>skipped question</b>		<b>0</b>		<b>0</b>		<b>0</b>

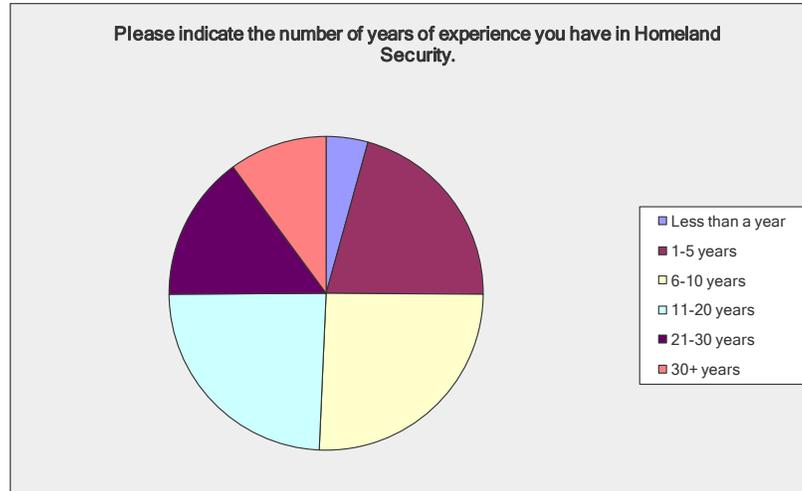

**Experience**

The respondents to the surveys had a range of experience, as shown in Figure 4 and Table 5, but only between 0.7% and 4.3% were new to the field (less than one year). In contrast, between 74.9% and 83.4% of respondents had 6 or more years of experience. Respondents might have additional years of experience in related fields (e.g., police, security).

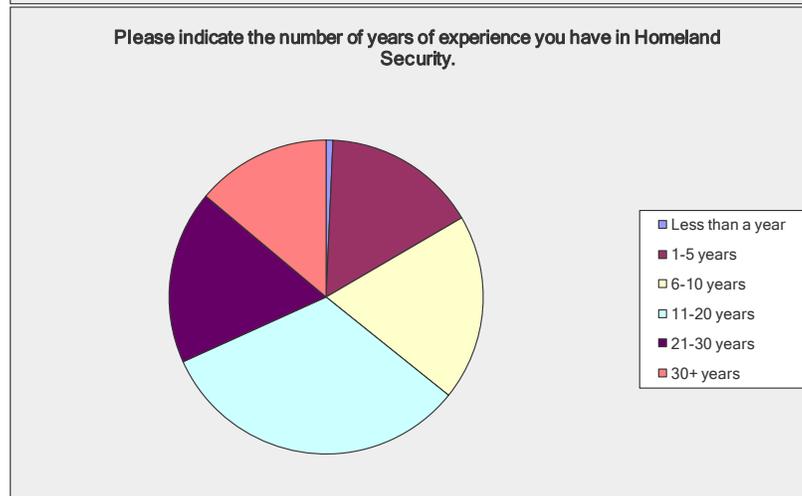

**Figure 4: Years of Experience**

**CHS-II**

**CHS-III**

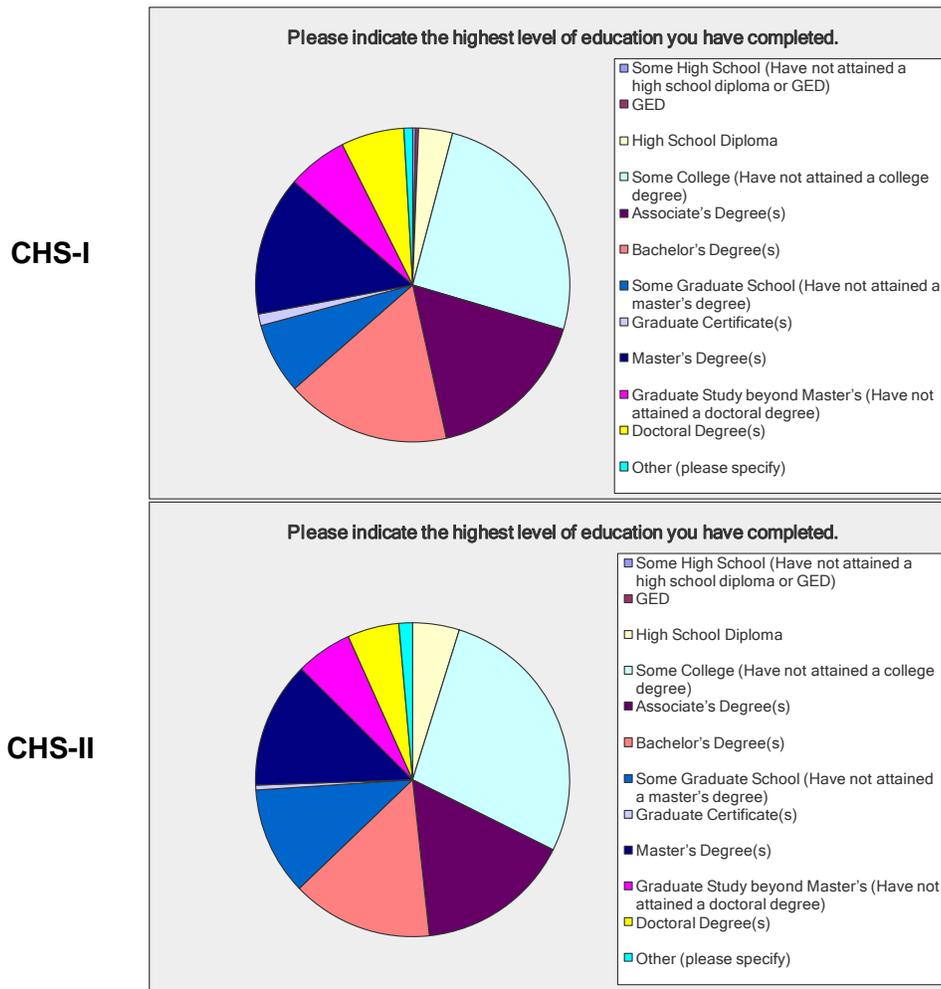

**Table 5: Years of Experience**

Answer Options	CHS-I		CHS-II		CHS-III	
	%	N	%	N	%	N
Less than a year	3.2%	11	4.3%	9	0.7%	1
1-5 years	17.6%	60	20.8%	43	15.9%	24
6-10 years	22.3%	76	25.6%	53	19.2%	29
11-20 years	29.0%	99	24.2%	50	32.5%	49
21-30 years	16.7%	57	15.0%	31	17.9%	27

<b>skipped question</b>		<b>0</b>		<b>0</b>		<b>0</b>

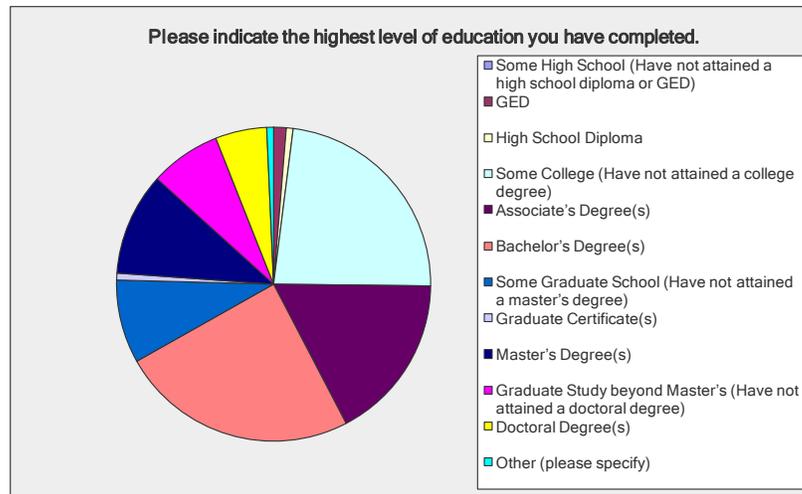

## Education

The distribution of educational level is depicted in Figure 4. Across the three surveys, only 3–14 respondents had not attended at least some post-secondary education. Approximately 33.1%–37.2% had attended or completed graduate school.

**Figure 5: Education**

CHS-III

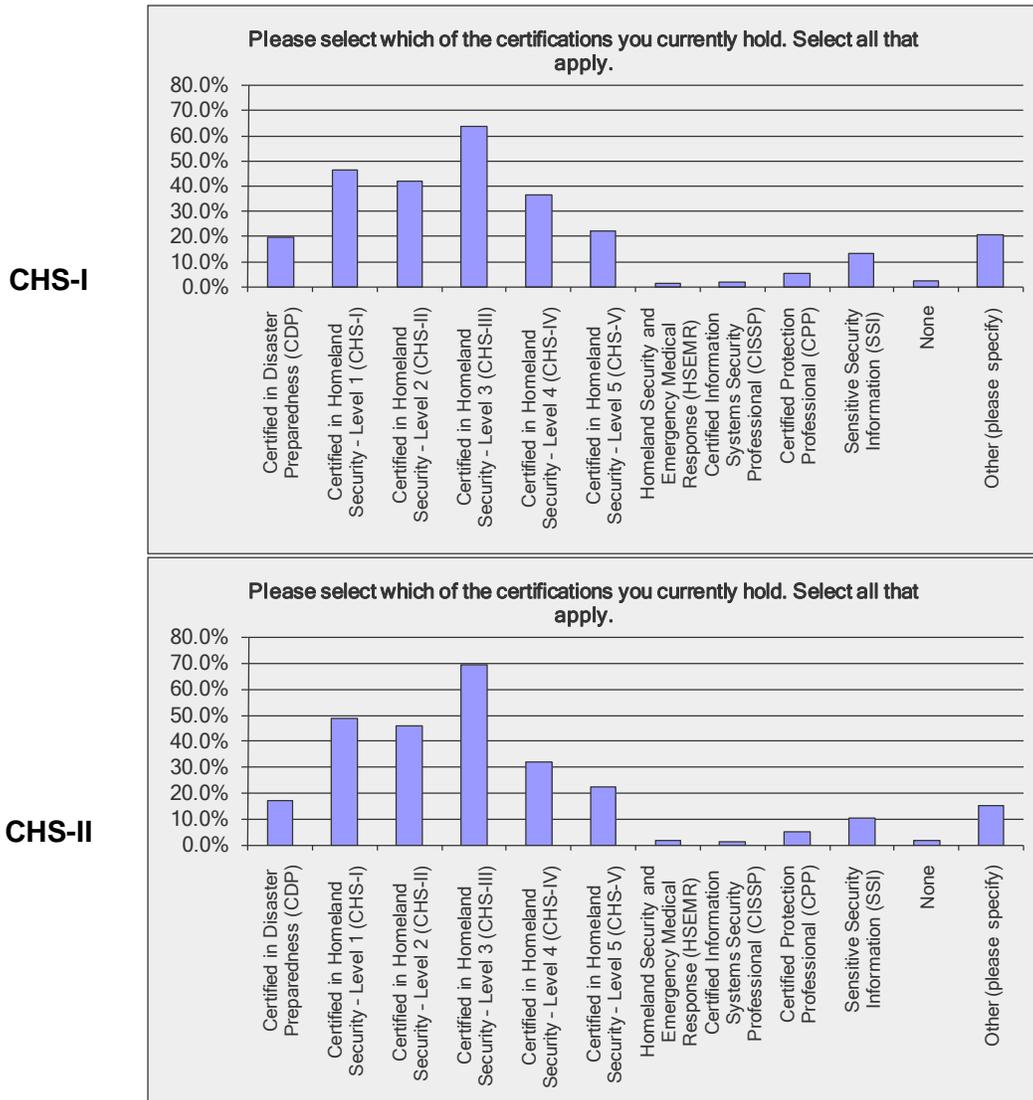

**Table 6: Education**

Answer Options	CHS-I		CHS-II		CHS-III	
	%	N	%	N	%	N
Some High School (Have not attained a high school diploma or GED)	0.3%	1	0.0%	0	0.0%	0
GED	0.3%	1	0.0%	0	1.3%	2
High School Diploma	3.5%	12	4.8%	10	0.7%	1
Some College (Have not attained a college degree)	25.5%	87	27.5%	57	23.2%	35
Associate's Degree(s)	17.0%	58	15.9%	33	17.2%	26

<b>skipped question</b>		<b>0</b>		<b>0</b>		<b>0</b>

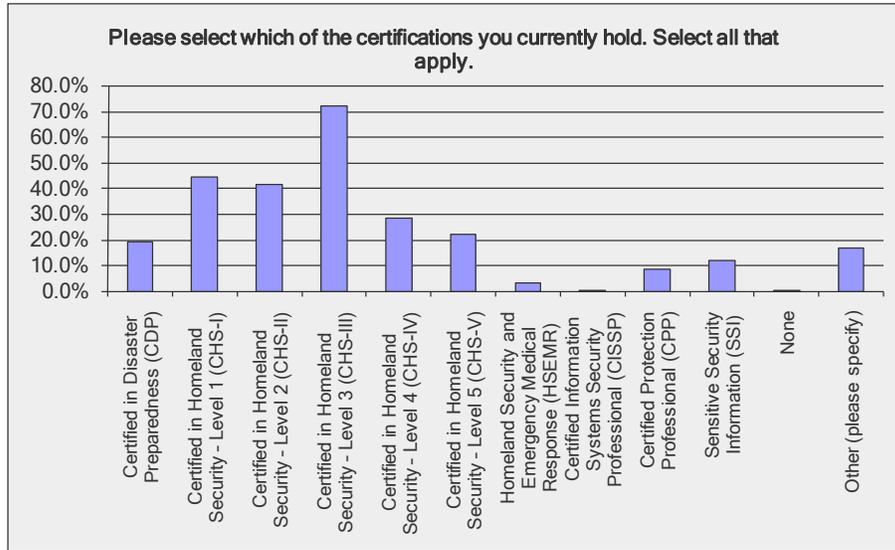

## Certifications

Respondents to the surveys had a range of credentials. The majority were certified in Homeland Security (note that some included their earlier levels, so that the percentages sum to more than 100%). However, a number of respondents had additional, specific certifications.

**Figure 6: Certifications**

**CHS-III**

**Table 7: Certifications<sup>a</sup>**

Answer Options	CHS-I		CHS-II		CHS-III	
	%	N	%	N	%	N
Certified in Disaster Preparedness (CDP)	19.6%	67	17.4%	36	19.2%	29
CHS-I	46.6%	159	48.8%	101	44.4%	67
CHS-II	41.9%	143	45.9%	95	41.7%	63
CHS-III	63.6%	217	69.6%	144	72.2%	109
CHS-IV	36.4%	124	31.9%	66	28.5%	43
CHS-V	22.0%	75	22.7%	47	22.5%	34
Homeland Security and Emergency Medical Response (HSEMR)	1.5%	5	1.9%	4	3.3%	5
Certified Information Systems Security Professional (CISSP)	1.8%	6	1.4%	3	0.7%	1
Certified Protection Professional (CPP)	5.3%	18	5.3%	11	8.6%	13
Sensitive Security Information (SSI)	13.2%	45	10.6%	22	11.9%	18
None	2.6%	9	1.9%	4	0.7%	1
Other (please specify)	20.5%	70	15.5%	32	17.2%	26
<b>answered question</b>		<b>341</b>		<b>207</b>		<b>151</b>
<b>skipped question</b>		<b>0</b>		<b>0</b>		<b>0</b>

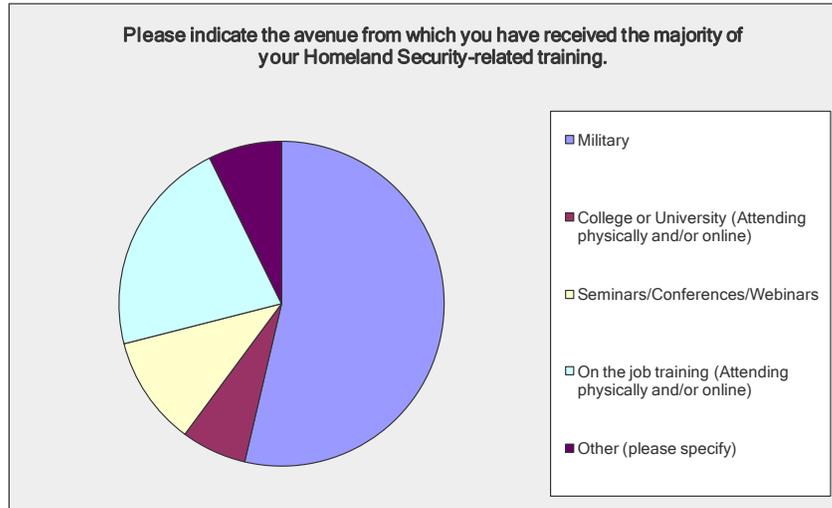

<sup>a</sup>Respondents could select all options that apply, hence the percentages won't sum to 100%.

**Training**

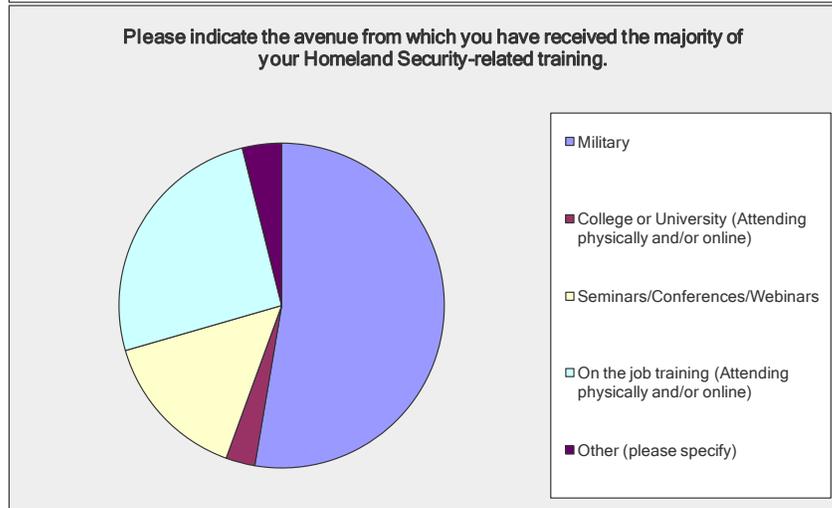

Respondents had received training and education in Homeland Security from a variety of sources. The largest percentage (49.0%–53.7%) received training from the military, while 21.7%–25.6% were trained on the job, and 10.9%–15.0% received training through seminars/conferences/webinars.

**Figure 7: Training**

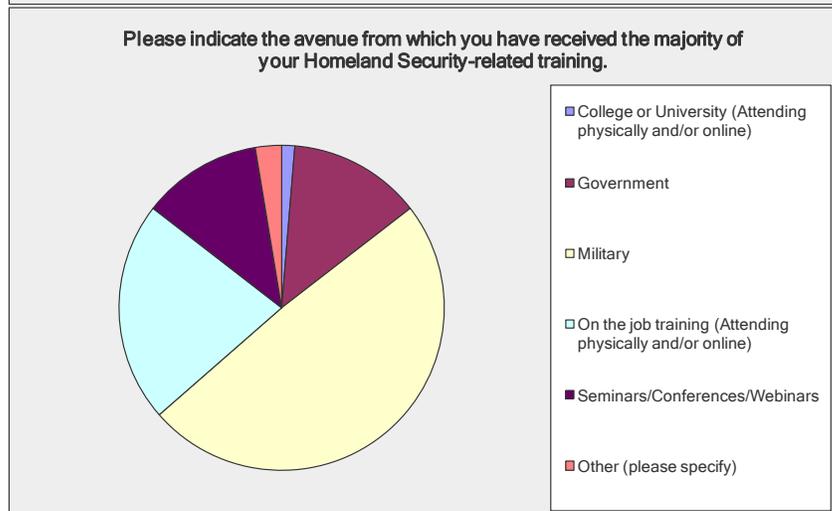

**CHS-I**

**CHS-II**

**CHS-III**

**Table 8: Training**

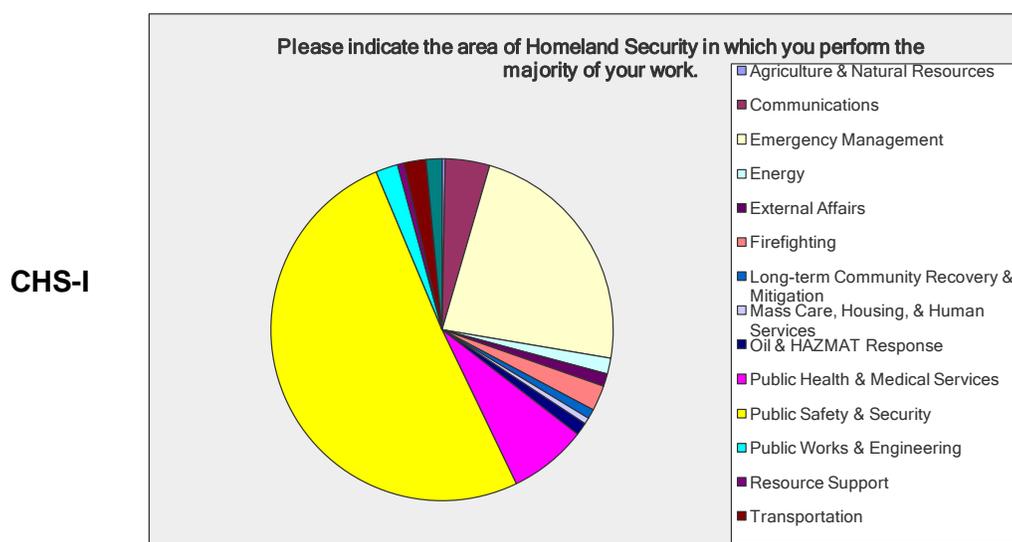

Answer Options	CHS-I		CHS-II		CHS-III	
	%	N	%	N	%	N
College or University (Attending physically and/or online)	6.5%	22	2.9%	6	1.3%	2

Military	53.7%	183	52.7%	109	49.0%	74
On the job training (Attending physically and/or online)	21.7%	74	25.6%	53	21.9%	33
Seminars/Conferences/Webinars	10.9%	37	15.0%	31	11.9%	18
Other (please specify)	7.3%	25	3.9%	8	2.6%	4
<b>answered question</b>		<b>341</b>		<b>207</b>		<b>151</b>
<b>skipped question</b>		<b>0</b>		<b>0</b>		<b>0</b>

<sup>a</sup>Government was not a response option on the CHS-I and CHS-II surveys

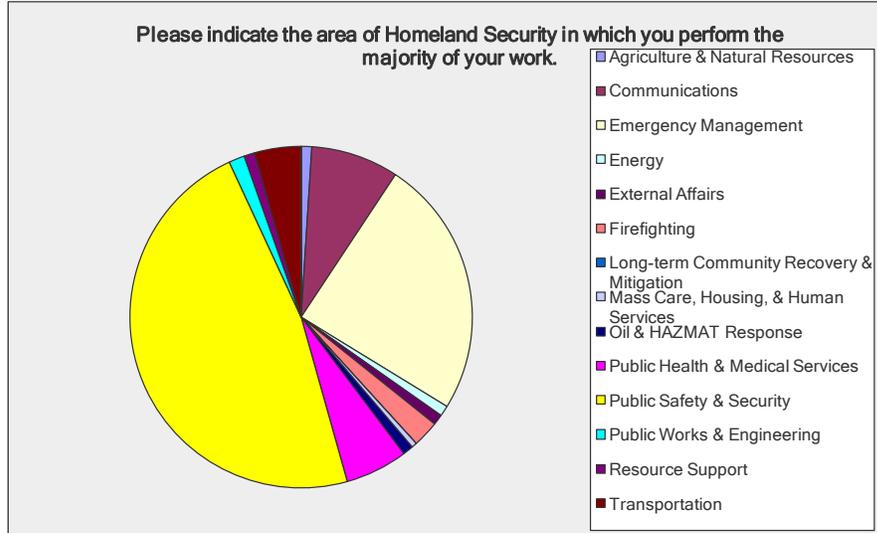

**Work Setting**

The respondents appropriately spanned a large number of work settings, with nearly a majority (47.5%–50.9%) currently working in Public Safety and Security, which reflects the current state of the field. However, nearly half were spread amongst other settings.

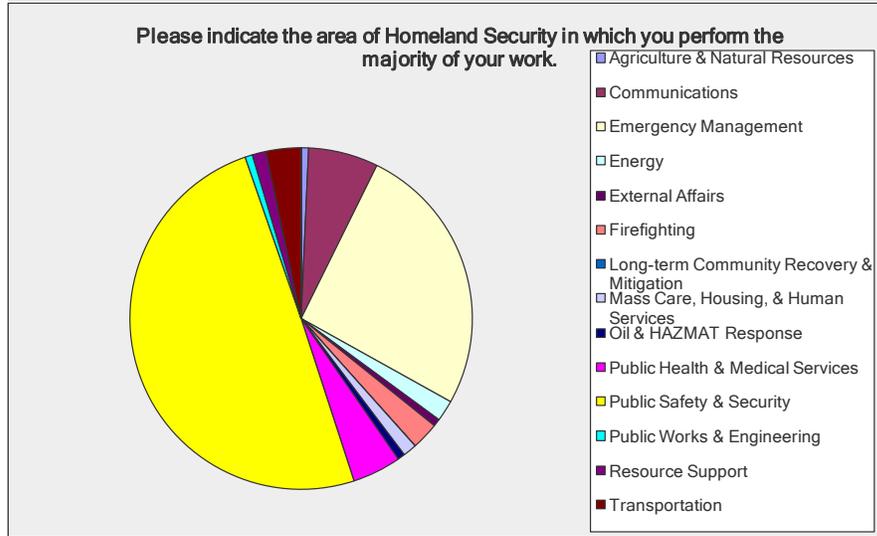

**Figure 8: Work setting**

**CHS-II**

**CHS-III**

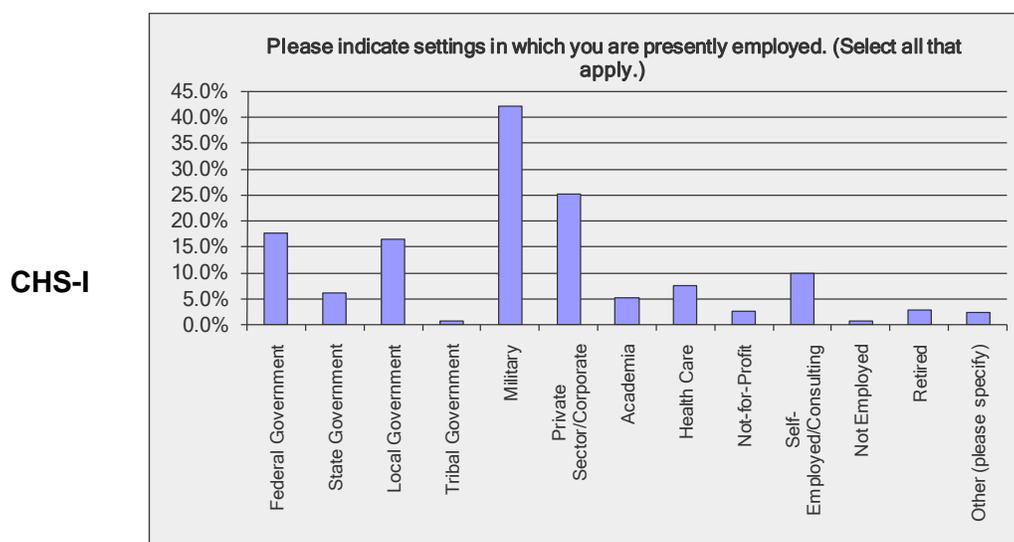

**Table 9: Work setting**

Not Employed	0.6%	2	0.5%	1	0.0%	0
Retired	2.9%	10	1.0%	2	5.3%	8
Other (please specify)	2.3%	8	2.9%	6	3.3%	5
<b>answered question</b>		<b>341</b>		<b>207</b>		<b>151</b>
<b>skipped question</b>		<b>0</b>		<b>0</b>		<b>0</b>

<sup>a</sup>Respondents could select all options that apply, hence the percentages won't sum to 100%.

<sup>b</sup>Respondents were asked to choose the one option that best applied to them, hence percentages will sum to 100%.

### **Task Statements**

Respondents were asked to rate task statements on their Importance and Frequency, as described earlier in this report. Those ratings will also be used in the development of examination blueprints. An advantage of task statements over knowledge statements is that they are more concrete and therefore are often easier for respondents to evaluate, especially with regard to Frequency.

The three surveys included a total of 166 task statements (73 for CHS-I, 38 for CHS-II, and 55 for CHS-III) divided into 7 major categories, or content domains. Each has several subdomains that will be used to help direct item development and examinee preparation, but not explicitly evaluated in the job analysis.

- Research, training, and program implementation (applicable to CHS-I)
- Preparedness and assessment (applicable to CHS-II)
- Mitigation and planning (applicable to CHS-III)

All statements were rated using the scale anchors listed below. For analysis purposes, numerical values (1 = Never/Not Important to 4 = Regularly/Extremely Important) were assigned to each scale point, and the mean frequency and importance ratings for each task were obtained.

<b>Frequency Ratings</b>	<b>Importance Ratings</b>
<b>How often do you perform this task as part of the job?</b> Never Occasionally Frequently Regularly	<b>How important is this task for competent performance?</b> Not Important Slightly Important Moderately Important Extremely Important

A summary of the mean frequency and importance ratings for each content area can be found in Table 11. On average, the mean importance ratings were higher than the mean frequency ratings. The Research content area received the highest mean frequency ratings (on average, in the “occasionally” to “frequently” range), while the Assessment content area received the highest mean importance ratings (on average, very near the “moderately important” category). The Training and Program Implementation areas received the lowest frequency ratings (on average, near the “occasionally” category) and the lowest importance ratings (on average, in the slightly to moderately important range)

**Table 11: Summary of mean frequency and importance ratings**

Survey	Content area	Frequency			Importance		
		Mean	Min	Max	Mean	Min	Max
CHS-I	Research	2.43	1.88	3.01	2.77	2.29	3.17
	Training	1.81	1.24	3.09	2.42	1.71	3.52
	Program Implementation	1.82	1.08	2.48	2.32	1.61	2.88
CHS-II	Preparedness	2.10	1.50	2.56	2.76	2.34	3.08
	Assessment	2.39	1.58	2.99	2.90	2.15	3.33

	Planning	2.82	2.04	3.31	2.23	1.60	2.82

Tables 12–14 present the ten tasks on each survey with the highest mean frequency ratings. For CHS-I, nine of these come from the Research area, while one is from the Training area. For CHS-II, nine of the highest rated tasks come from the Assessment area, while one comes from the Preparedness area. Finally, for CHS-III, seven of the highest rated tasks come from the Planning area and three come from the Mitigation area.

**Table 12: Tasks with highest frequency: CHS I**

Section	Task	Never	Occasionally	Frequently	Regularly	Response Count	Mean
Training	Conduct training	14	86	96	143	339	3.09
Research	Read information on government websites	3	102	121	112	338	3.01
Research	Read guiding regulatory documents	21	114	110	93	338	2.81
Research	Record data	43	98	85	110	336	2.78
Research	Analyze incidents	21	120	109	87	337	2.78

Planning	Develop of an emergency management system	13	27	40	65	145	3.08

Tables 15–17 present the ten tasks with the lowest mean frequency ratings. For CHS-I, six of these come from the Program Implementation area, while four are from the Training area. For CHS-II, seven of the lowest rated tasks come from the Preparedness area, while three come from the Assessment area. Finally, for CHS-III, six of the lowest rated tasks come from the Mitigation area and four come from the Planning area.

**Table 15: Tasks with lowest frequency: CHS I**

Section	Task	Never	Occasionally	Frequently	Regularly	Response Count	Mean
Training	Develop medical training	245	61	15	15	336	1.40
Training	Lead medical training	249	56	12	18	335	1.40
Training	Lead training on medical standards of practice	260	46	18	12	336	1.35
Program Implementation	Secure financial emergency management assistance	253	58	17	7	335	1.34
Program Implementation	Write grant proposals	264	57	16	4	341	1.30
Program Implementation	Develop medical program policies	271	43	14	9	337	1.29
Program Implementation	Develop medical program directives	274	41	13	9	337	1.28
Training	Lead training on lobbying requirements	282	32	16	6	336	1.24
Program Implementation	Develop medical program regulations	292	37	7	5	341	1.19
Program Implementation	Secure tribal funding	319	11	6	1	337	1.08

**Table 16: Tasks with lowest frequency: CHS II**

Section	Task	Never	Occasionally	Frequently	Regularly	Response Count	Mean
Preparedness	Establish policies and procedures for restoration activities	81	72	33	17	203	1.93
Preparedness	Prepare communities for natural disasters	94	70	26	14	204	1.80
Preparedness	Implement business continuity plans	99	63	29	13	204	1.78
Preparedness	Test public warning systems	117	47	26	14	204	1.69
Assessment	Evaluate new construction	105	71	18	9	203	1.66
Assessment	Evaluate renovation blueprints	118	54	21	10	203	1.62
Preparedness	Maintain mass care systems	128	45	14	17	204	1.61
Assessment	Monitor international travel	122	57	11	13	203	1.58
Preparedness	Ensure infection control preparedness	126	59	9	10	204	1.52
Preparedness	Ensure clinical operations preparedness	134	44	15	9	202	1.50

**Table 17: Tasks with lowest frequency: CHS III**

Section	Task	Never	Occasionally	Frequently	Regularly	Response Count	Mean
Planning	Prepare emergency management budgets	76	35	24	12	147	1.81
Planning	Provide escort services	66	58	14	9	147	1.77
Mitigation	Lead in recovery from terrorist attacks	81	38	12	17	148	1.76
Mitigation	Screen mail and parcels	87	28	17	15	147	1.73
Planning	Develop mass care systems	69	58	12	8	147	1.72
Mitigation	Lead search and rescue requests	79	43	15	9	146	1.68
Planning	Provide travel liaison for executives	88	39	11	9	147	1.60
Mitigation	Screen passengers	99	19	18	11	147	1.60
Mitigation	Respond to electronic legal discovery requests	97	36	12	2	147	1.45
Mitigation	Coordinate hospital safety activities	106	29	11	3	149	1.40

Tables 18–20 present the ten tasks with the highest mean importance ratings. For CHS-I, nine of these come from the Research area, while one is from the Training area. For CHS-II, nine of the highest rated tasks come from the Assessment area, while one comes from the Preparedness area. Finally, for CHS-III, nine of the highest rated tasks come from the Planning area and one comes from the Mitigation area.

**Table 18: Tasks with highest importance: CHS I**

Section	Task	Not	Slightly	Moderately	Extremely	Response Count	Mean
Training	Conduct training	11	24	80	223	338	3.52

Planning	Develop evacuation plans	12	19	49	62	142	3.13
Planning	Develop strategies for response to terrorism	15	21	44	67	147	3.11
Mitigation	Preserve life at disasters and/or incidents	24	17	23	77	141	3.09
Planning	Develop of an emergency management system	13	27	40	65	145	3.08

Tables 21–23 present the ten tasks with the lowest mean importance ratings. For CHS-I, eight of these come from the Program Implementation area, while two are from the Training area. For CHS-II, six of the lowest rated tasks come from the Preparedness area, while four come from the Assessment area. Finally, for CHS-III, seven of the lowest rated tasks come from the Mitigation area and three come from the Planning area.

**Table 21: Tasks with lowest importance: CHS I**

Section	Task	Not	Slightly	Moderately	Extremely	Response Count	Mean
Program Implementation	Develop maps	148	75	65	47	335	2.03
Program Implementation	Apply BS25999	152	55	66	45	318	2.01
Program Implementation	Secure financial emergency management assistance	176	46	49	62	333	1.99
Program Implementation	Write grant proposals	183	44	49	62	338	1.97
Training	Lead training on medical standards of practice	158	63	49	47	317	1.95
Program Implementation	Develop medical program policies	175	58	55	44	332	1.90
Program Implementation	Develop medical program directives	180	52	55	44	331	1.89
Program Implementation	Develop medical program regulations	193	54	52	42	341	1.83
Training	Lead training on lobbying requirements	201	44	44	32	321	1.71
Program Implementation	Secure tribal funding	225	42	33	31	331	1.61

**Table 22: Tasks with lowest importance: CHS II**

Section	Task	Not	Slightly	Moderately	Extremely	Response Count	Mean
Preparedness	Explain shelter-in-place procedures	36	48	69	47	200	2.64
Assessment	Guide protective action	41	51	68	38	198	2.52
Preparedness	Test public warning systems	63	33	45	58	199	2.49
Preparedness	Implement business continuity plans	56	40	58	44	198	2.45
Preparedness	Maintain mass care systems	63	38	51	42	194	2.37
Preparedness	Ensure infection control preparedness	63	39	54	39	195	2.35
Preparedness	Ensure clinical operations preparedness	68	39	44	45	196	2.34
Assessment	Evaluate new construction	59	46	60	30	195	2.31
Assessment	Evaluate renovation blueprints	69	54	41	32	196	2.18
Assessment	Monitor international travel	70	56	42	29	197	2.15

**Table 23: Tasks with lowest importance: CHS III**

Section	Task	Not	Slightly	Moderately	Extremely	Response Count	Mean
Mitigation	Maintain peace at public events	40	27	41	32	140	2.46
Planning	Develop industrial emergency plans	39	27	51	24	141	2.43
Mitigation	Screen mail and parcels	48	24	38	31	141	2.37
Mitigation	Operate vehicle check points	45	30	36	30	141	2.36
Planning	Provide escort services	42	34	42	24	142	2.34
Mitigation	Operate traffic law enforcement	53	25	38	27	143	2.27
Mitigation	Screen passengers	56	24	28	30	138	2.23
Mitigation	Respond to electronic legal discovery requests	55	38	29	17	139	2.06
Planning	Provide travel liaison for executives	63	27	31	19	140	2.04
Mitigation	Coordinate hospital safety activities	64	32	27	18	141	1.99

Results from all task ratings can be found in Appendix A.

## **Summary**

This report describes a job analysis study for the Certified in Homeland Security, CHS® Levels I, II, and III (CHS-I-III) certification program. The goal of the study was to produce a comprehensive list of professional tasks performed on the job, with empirical data regarding the importance and frequency of those tasks in order to garner detailed data on the current structure of the jobs performed by professionals in this role and better understand the field of Homeland Security. A job analysis study is an essential foundation for the validity of a certification program.

The first step was the development of the list of tasks by a committee of highly experienced subject matter experts. Once this was completed, surveys were constructed (one for each of the three CHS levels) utilizing the list as well as a number of demographic variables. The data set was analyzed to provide a depiction of both the demographic qualities of the sample as well as the structure of the profession, as detailed in the Results section.

While the foundation of validity, the completion of a job analysis survey is only one step in the test development cycle. The next step is to identify which tasks should be covered on the test, and the relative weight assigned to tasks and domains. A model for this process is presented in Kane (1997). However, that process is not directly part of the job analysis study. In test blueprint design, the goal of task inclusion is not to analyze the job but rather to produce the blueprints for the test that specify the content representation. Therefore, analysis of job analysis results for the creation of a test blueprint will be documented in a test design report submitted separately.
