# EDUCATION

---

**Technical University Varna**  
Master of Computer Systems and Technologies

**Technical University Varna**  
Bachelor of Computer Systems and Technologies

**Professional technical school "Tsar Simeon Veliki"**  
Computer Systems

# EXPERIENCES

---

## **Alkuvoima East**

Nowadays, everything is moved to the browser. My main responsibility is building flexible, modular and well tested JavaScript/HTML/CSS based applications. Some of them require real time communication, so I have the luck to work with NodeJS. Along with that I'm using node to improve and speed up my workflow. Coding cross-browser web sites, I'm happy to say that I produce responsive apps.

## **Freelancer**

At that time I was everything. I mean I was the sales and project manager. I did front-end and back-end development. I even design the sites of my clients. However most of my projects require solid JavaScript/ActionScript skills. It was interesting time, because the things started to change. The flash started dying and everyone wanted his product in pure HTML/CSS/JavaScript.

## **Knassar**

At the company I was responsible for the front-end development. 50% of my time went to JavaScript/HTML/CSS tasks and the other half was taken by Flash/Flex development. From time to time I code in PHP as well.

## **Design.BG Studios**

I started as graphic designer, but very soon I got new responsibilities. I had to slice my designs to perfect pixel HTML/CSS/JavaScript web applications. At that time Flash was still

quite popular, so I started digging into ActionScript2/3. This gives me a very good base for my favorite language - JavaScript. You know, the both are based on ECMAScript.

### **Advertising Agency "EXTREME"**

My main job was to design print materials, but after few months I took care for the web sites requests. At that time we used mostly HTML, JavaScript and Flash.

## SKILLS

---

### **Programming Languages**

- JavaScript (client-side)

*(Libraries: jQuery, MooTools, Jasmine, BackboneJS, underscore, APIs: Twitter API, Facebook API, Flickr API;)*

- JavaScript (server-side/nodejs)

*(ExpressJS, GruntJS, ZombieJS)*

- CSS

*(Concepts: BEM, OOCSS, SMACSS, Atomic design; Frameworks: Bootstrap)*

- PHP (WordPress, Smarty, SocialEngine)

- ActionScript 2.0, 3.0 (RobotLegs framework)

- HTML, XML, MXML

- MySQL, MongoDB

### **Execution**

- Responsive web design (Mobile first)

- Single page apps development

- Writing clean and flexible CSS

- Writing modular object oriented JavaScript

- CMS development

### **Software:**

- Adobe Photoshop

- Adobe Flash

- CorelDraw

### Version control systems:

- GIT
- SVN

### Operating Systems:

- Windows
- Linux
