

IGF-USA 2021 Survey Results – Initial Report

The 2021 IGF-USA Subject Matter Survey ran from March 2-16, receiving a total of 108 responses. This document provides a summary of the results. Each calculation is described below and has accompanying charts and tables.

This document is the initial report and is being released prior to review by the Steering Committee. Therefore, it presents the data without attempting to draw any concrete conclusions.

At the end of the survey, respondents were asked a series of questions about themselves, including stakeholder group, number of IGF-USAs attended, and number of global IGFs attended. Before reviewing the results, here is make up of the survey respondents.

Stakeholder Breakdown

- **Private Sector:** 45 Responses (45.45%)
- **Civil Society / Academia:** 30 Responses (30.30%)
- **Technical Community:** 9 Responses (9.09%)
- **None / Other:** 11 Responses (11.11%)
- **Government / Intergovernmental Organization:** 4 Responses (4.04%)

Number of IGF-USAs Attended

- None: 16 (15.53%)
- 1 IGF-USA: 27 (26.21%)
- 2 IGF-USAs: 13 (12.62%)
- 3 IGF-USAs: 12 (11.65%)
- 4+ IGF-USAs: 35 (33.98%)

Number of global IGFs Attended

- None: 34 (33.66%)
- 1 IGF: 17 (16.48%)
- 2 IGFs: 16 (15.84%)
- 3 IGFs: 4 (3.96%)
- 4+ IGFs: 30 (33.66%)

Survey Structure

Based on the results from the Call for Topics and subsequent deliberations of the Steering Committee, the survey was organized into three main sections and built around 9 subject areas:

- Cybersecurity
- Data Governance and Privacy
- Content Policy
- Global Internet Infrastructure
- 5G
- Access and Digital Inclusion
- Digital Markets and Competition
- Artificial Intelligence
- Trust

Section 1 was based on cross-cutting themes. Each theme included in this section represented a lever of influence that could have both positive and negative impacts on each subject and related topics. Respondents were asked to identify the themes they would like to see explored for each subject area, with no limits on how many options the respondents could select.

Themes included:

- Best Practices and Norms
- Regulation and Enforcement
- Intergovernmental Cooperation
- Emerging Technologies and Disruption
- Technical Standards

Section 2 was based on breaking down each subject area into more specific topics sourced from the 112 submissions received during the Call for Topics. Each subject area included between 5 and 9 specific topics and respondents were asked to rate all of the *topics* on how essential they are to their respective *subject area*, using a three point Likert scale:

- **Essential** - Needs to be included in this subject areas portion of the program and should either have its own session or be a major focus of a session
- **Important** - Should be included in this subject areas portion of the program in support of the larger conversation
- **Not Very Important**- Should not be included in this subject areas portion of the program unless organically elevated by larger conversation

Section 3 simply asked respondents to use a scale of 0-10 to indicate how much emphasis should be placed on each *subject area*.

Understanding the Results

This report presents the data in a variety of ways and breaks down the results using various metrics, including how respondents answered specific questions. In particular, the responses from Section 3 will be used to filter the results from Sections 1 and 2. In addition to providing the full data for each subject area in Sections 1 and 2, results will be provided based on the following conditions:

- All Responses
- Results from responses that rated the corresponding subject area 5 or higher – This metric is used to limit the results to respondents that **at a minimum** recognize the importance of the subject area, but also includes those with a significant interest and/or expertise.
- Results from responses that rated the corresponding subject area 8 or higher – This metric is used to limit the results to respondents that **at a minimum** have a significant interest and/or expertise in the subject area.

Cross-Cutting Themes

Results from Section 1 will be displayed as the percentage of respondents that selected each option and the relevant results will be included in each Subject Area Breakdown. These results will be provided in four graphs/tables – one from each of the Section 3 metrics and another that combines the results into a single graph/table for comparison across metrics.

Rating Topics

Results from Section 2 use two measurements – mean scores and response counts for each option. The point system used to calculate the mean score assigns the following numerical values to each point of the Likert Scale:

- Not Very Important = 1
- Important = 2
- Essential = 3

Results for both the mean scores and response counts will be provided in graphs/tables for each of the metrics from Section 3. An additional graph/table for comparison across metrics will only be provided for the mean scores. It was determined that it was easier to compare the response counts using the separate graphs than interpreting the comparison on a single complicated chart.

Rating Subject Areas

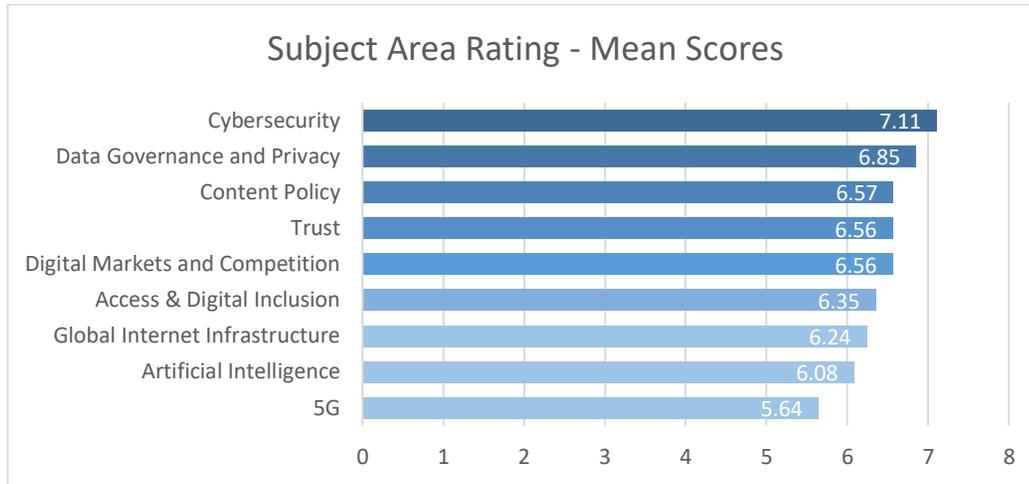

Respondents were asked to use a scale of 0-10 to indicate how much emphasis should be placed on the 9 different subject areas in the survey. This section provides the results based on two different metrics:

- Mean score of all responses
- Response counts for specific ranges of rating (1-4; 5-7; 8-10)

The mean scores provide a general understanding of how each subject area performed in this section of the survey, but the break down by specific ranges allows for a more detailed look at how respondents rated each subject. For example, "Trust" and "Digital Markets and Competition" had the same mean score, but the specific response counts that seem to indicate that a greater number of respondents **at a minimum** recognize the importance of "Digital Markets and Competition," while a greater number of respondents **at a minimum** have a significant interest and/or expertise in the subject area.

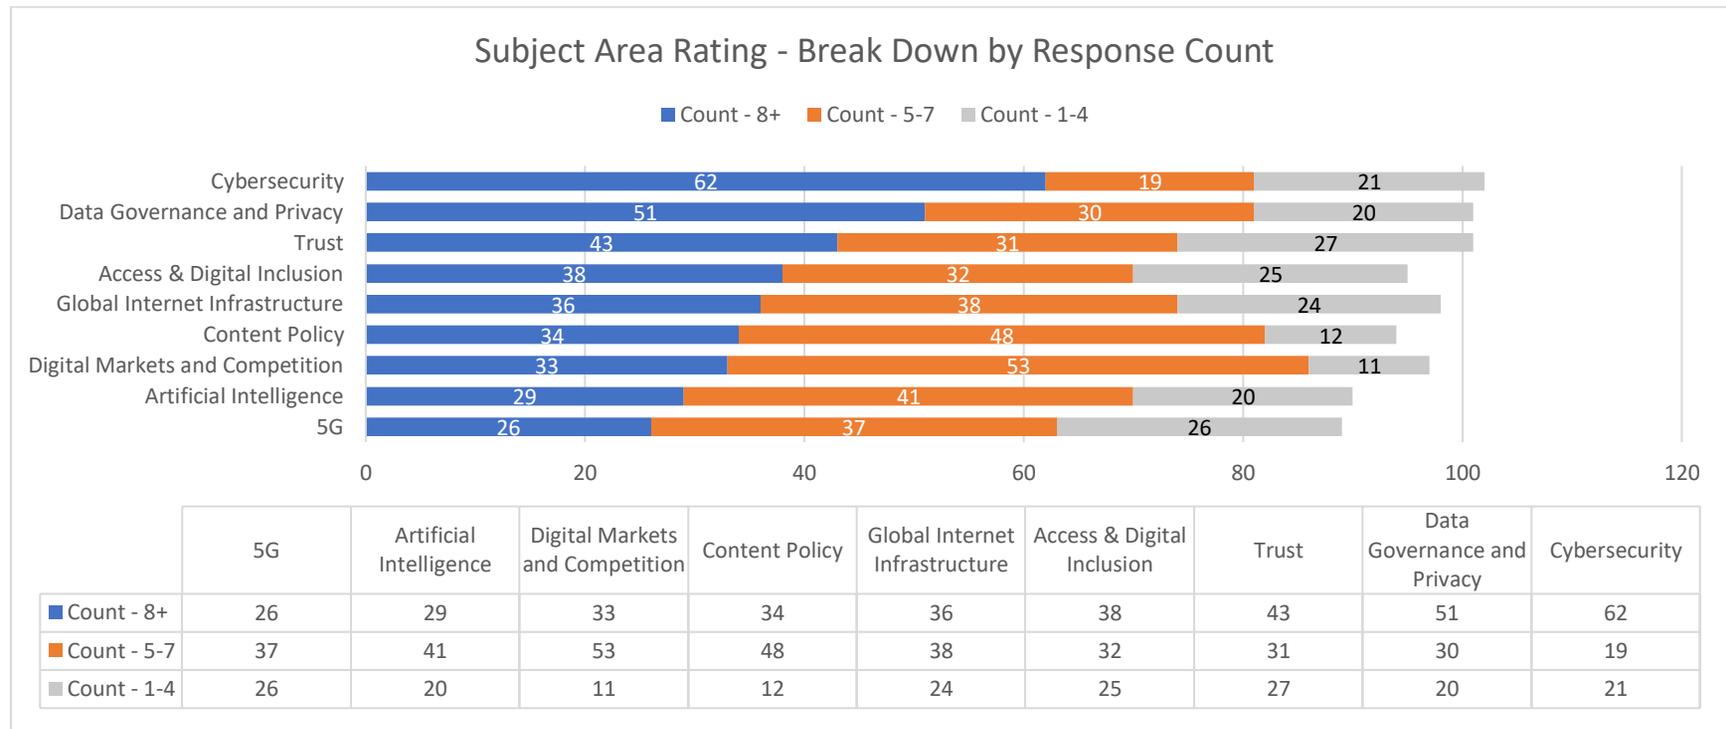

Subject Area Rating

The chart and table below show the mean scores for each subject area sorted from highest to lowest.

Subject Area	Mean
Cybersecurity	7.11
Data Governance and Privacy	6.85
Content Policy	6.57
Trust	6.56
Digital Markets and Competition	6.56
Access & Digital Inclusion	6.35
Global Internet Infrastructure	6.24
Artificial Intelligence	6.08
5G	5.64

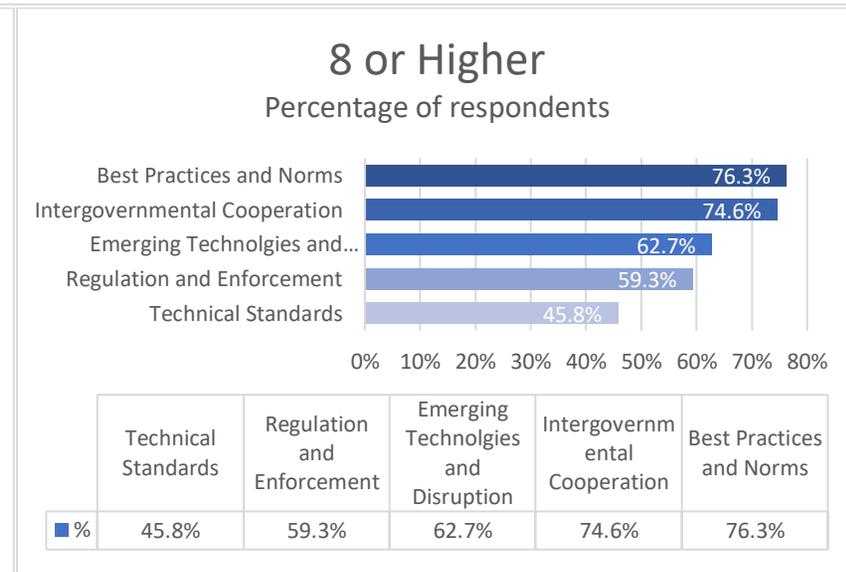

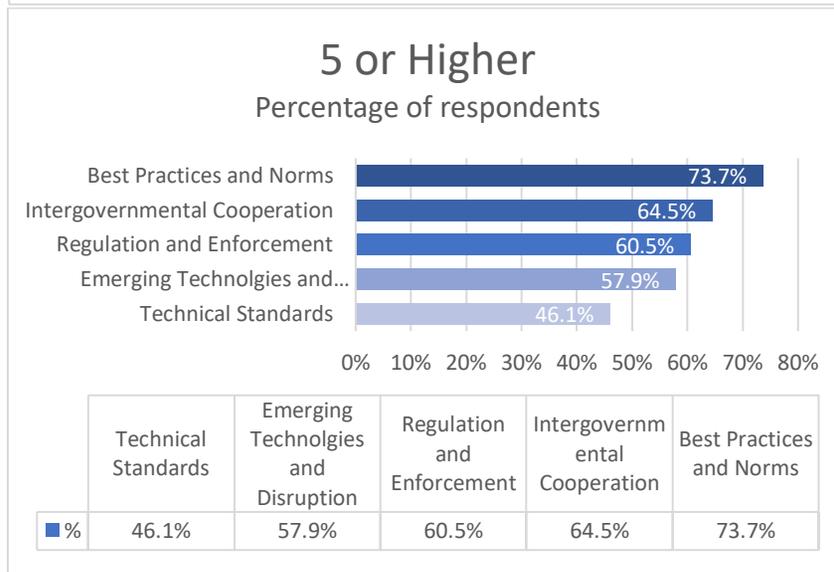

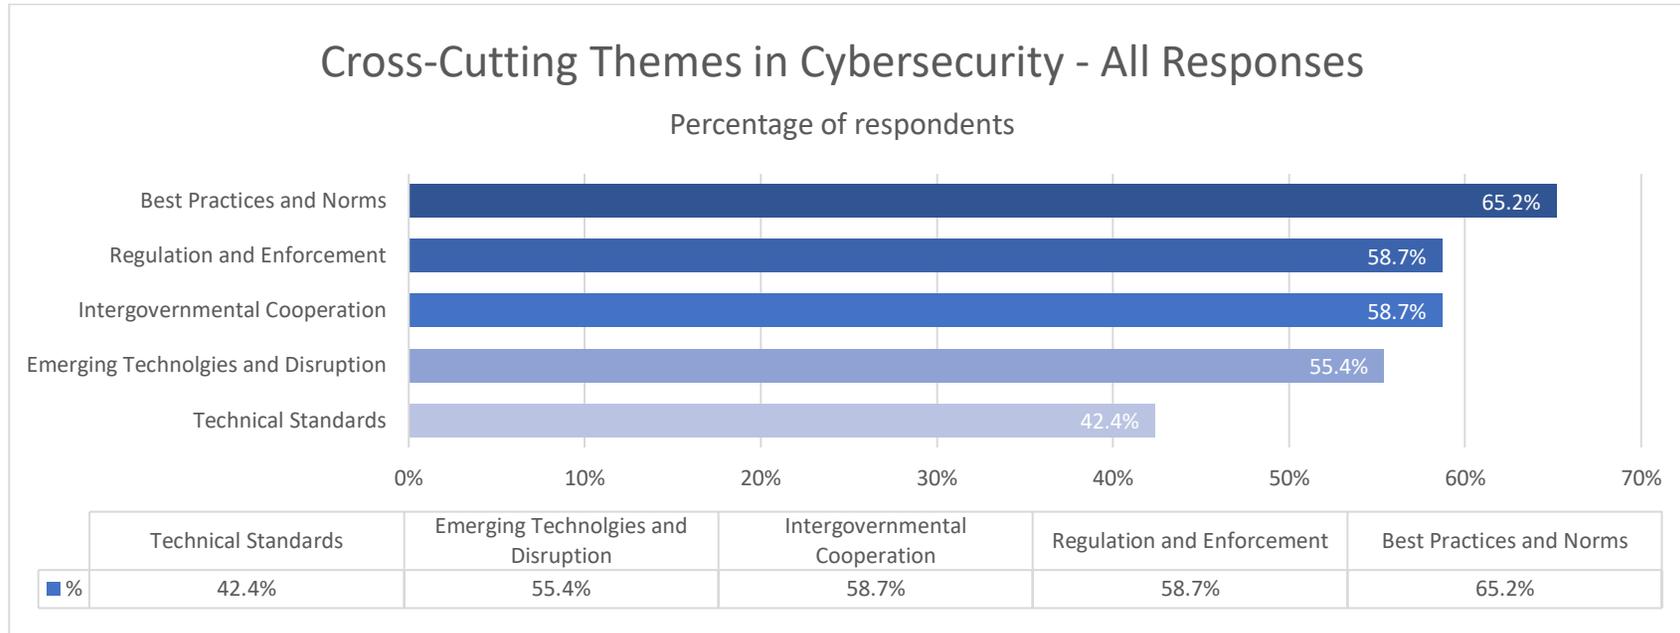

The chart and table below show the response counts within each specified range for each subject area: 1-4, 5-7, and 8-10.

Subject Area Breakdown – Cybersecurity

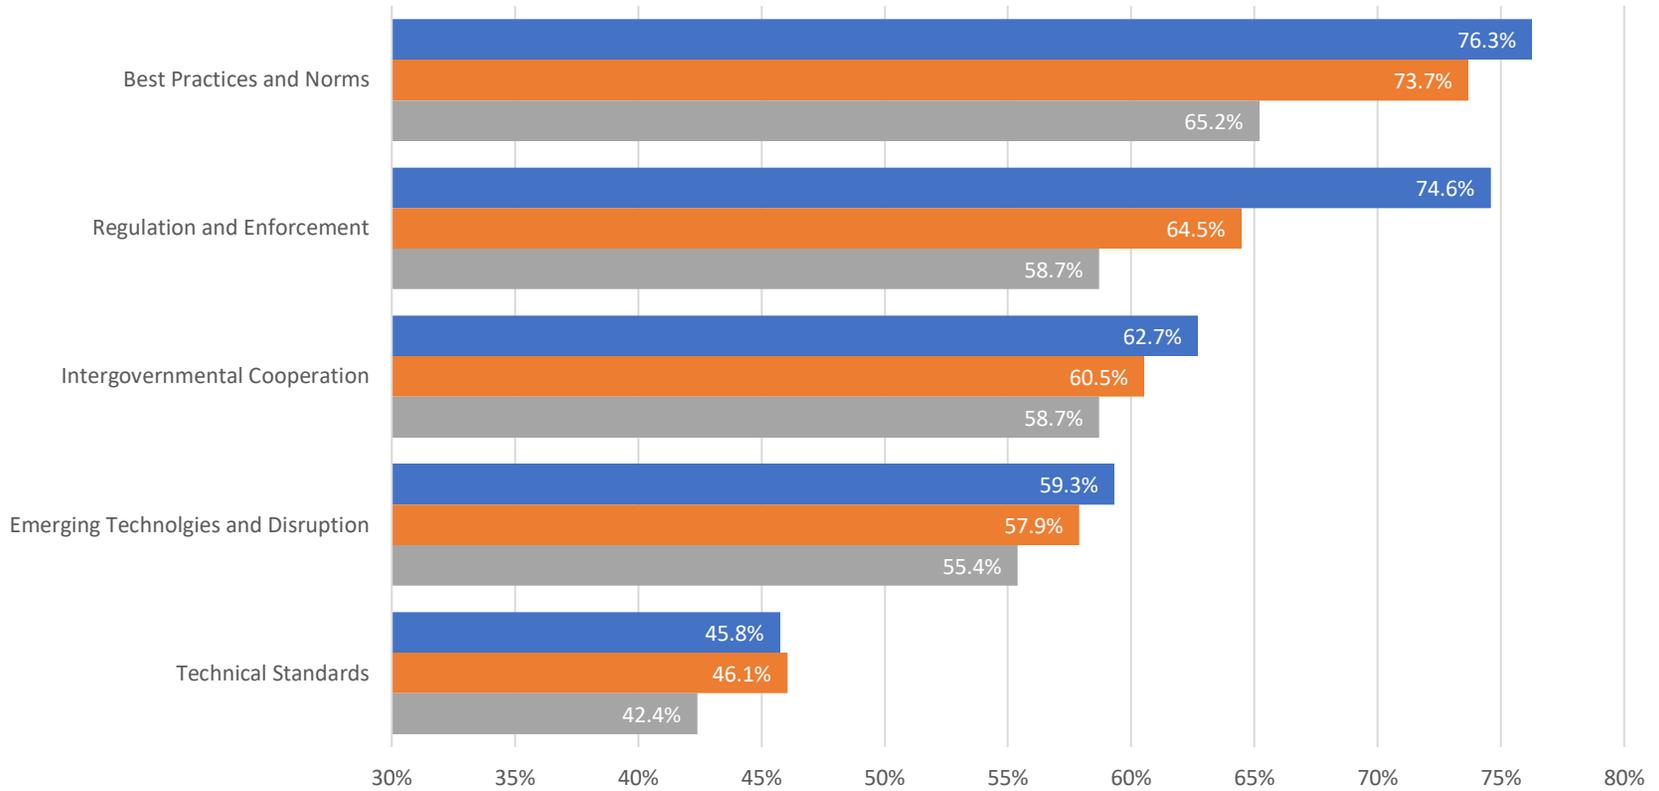

Cross-Cutting Themes

The charts below show the percentage of respondents that selected each theme for the Cybersecurity Subject Area, based on the rating they gave to Cybersecurity in Section 3.

This chart combines the data from the other graphs in this section for easier comparison of results across metrics.

Cross-Cutting Themes in Cybersecurity - Comparison Across Metrics

	Technical Standards	Emerging Technologies and Disruption	Intergovernmental Cooperation	Regulation and Enforcement	Best Practices and Norms
Scored - 8 +	45.8%	59.3%	62.7%	74.6%	76.3%
Scored - 5 +	46.1%	57.9%	60.5%	64.5%	73.7%
All	42.4%	55.4%	58.7%	58.7%	65.2%

■ Scored - 8 + ■ Scored - 5 + ■ All

Cybersecurity Topics

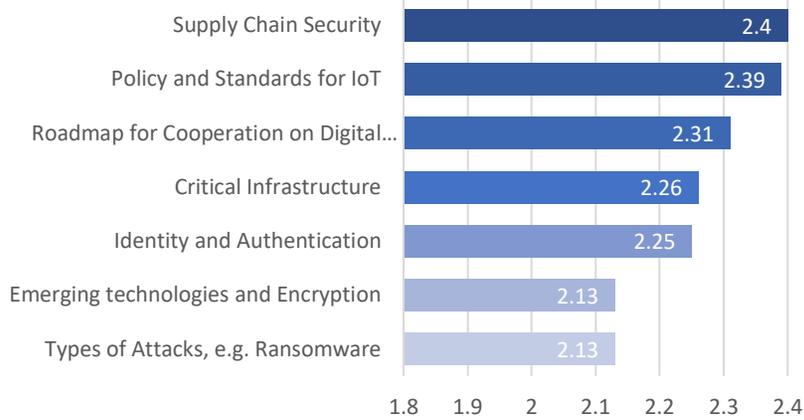

The charts below show the mean scores and response counts for each option, based on the rating they gave to Cybersecurity in Section 3. The point system used to calculate the mean score assigns the following numerical values to each point of the Likert Scale:

- Not Very Important = 1
- Important = 2
- Essential = 3

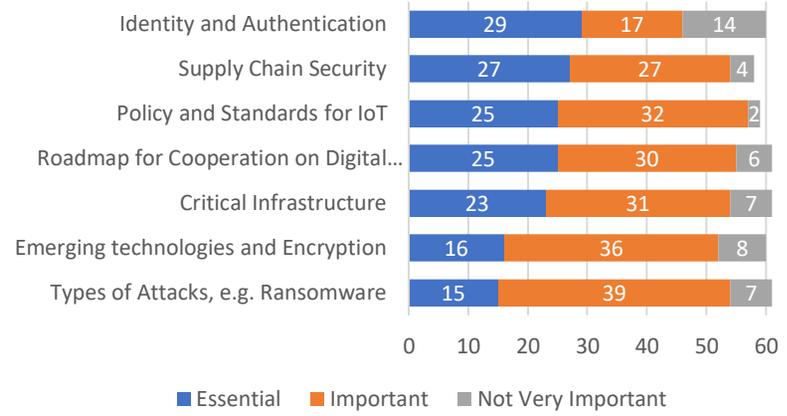

Mean Score - Rated 8 or Higher

Not Very Important = 1; Important = 2; Essential = 3

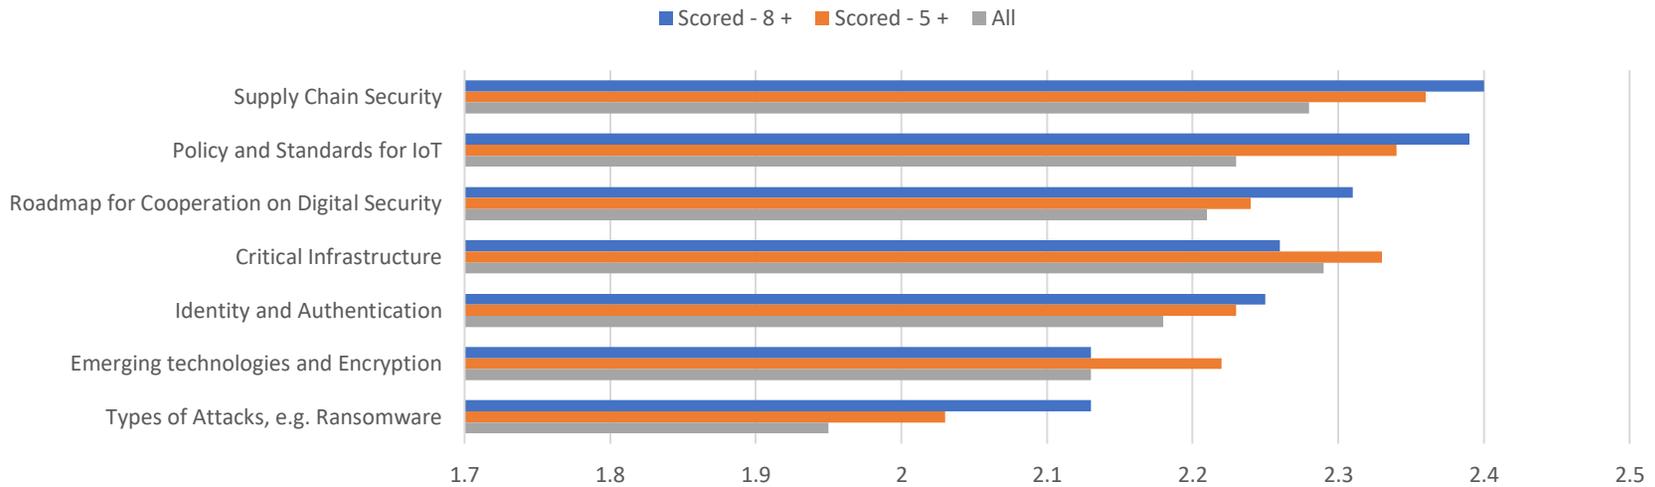

Response Count - 8 or Higher

Breakdown by Response

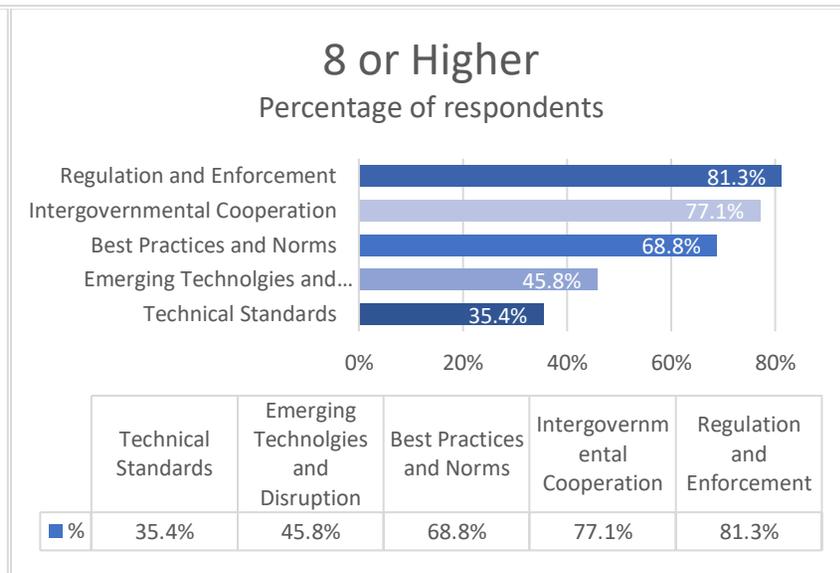

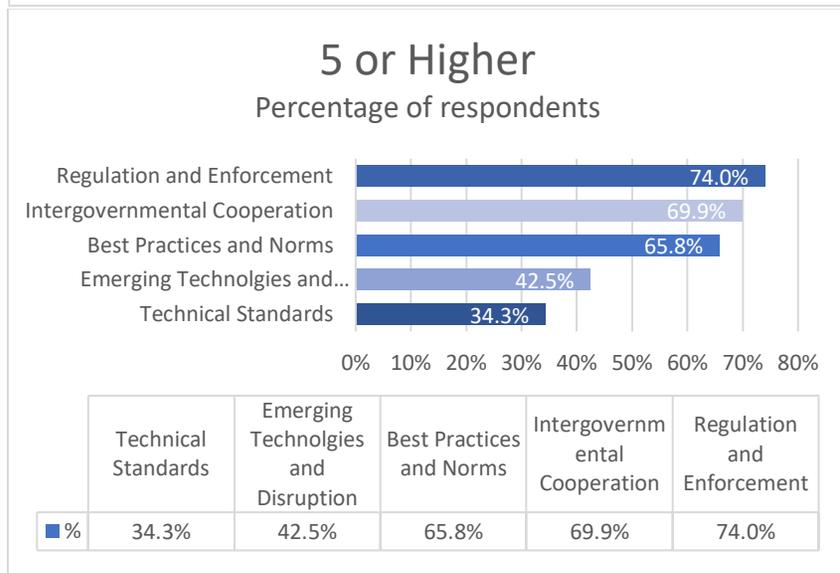

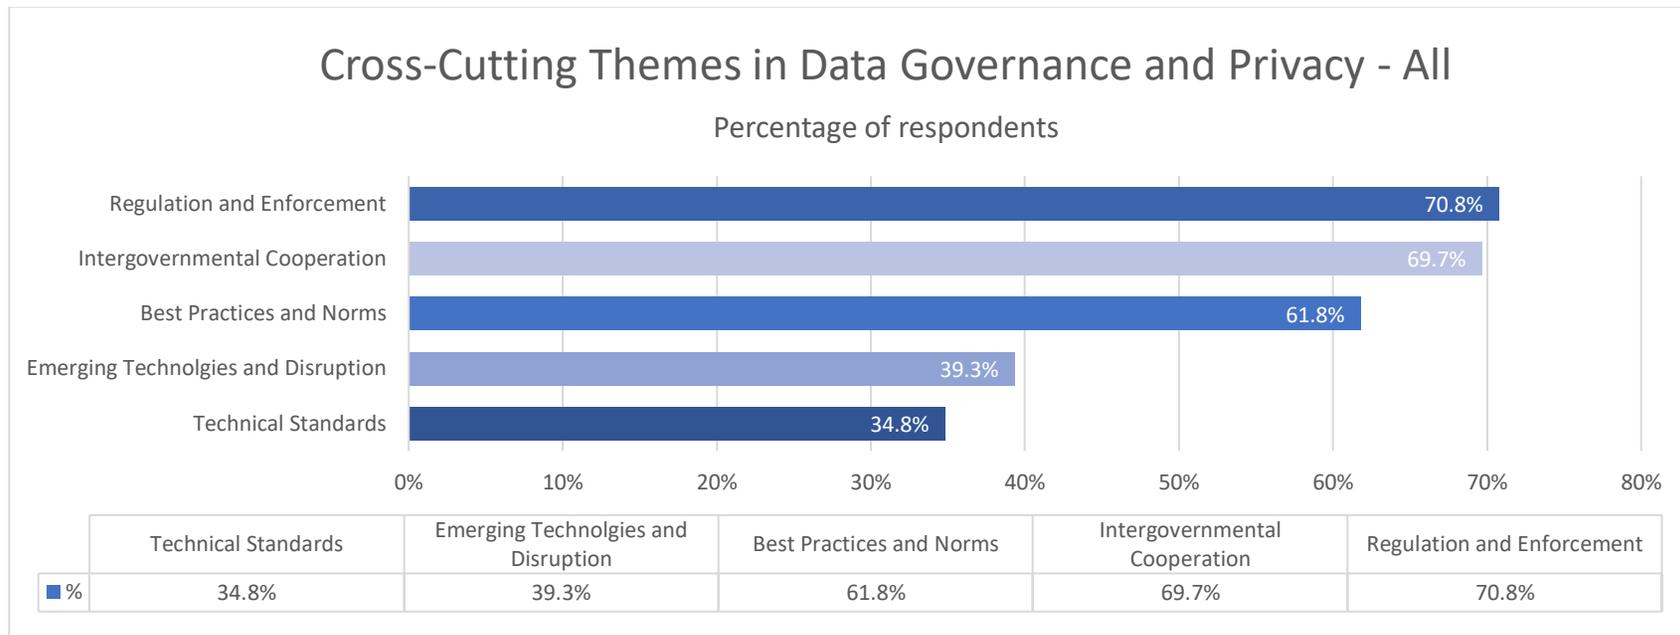

Mean Scores - Comparison Across Metrics

	Types of Attacks, e.g. Ransomware	Emerging technologies and Encryption	Identity and Authentication	Critical Infrastructure	Roadmap for Cooperation on Digital Security	Policy and Standards for IoT	Supply Chain Security
Scored - 8 +	2.13	2.13	2.25	2.26	2.31	2.39	2.4
Scored - 5 +	2.03	2.22	2.23	2.33	2.24	2.34	2.36
All	1.95	2.13	2.18	2.29	2.21	2.23	2.28

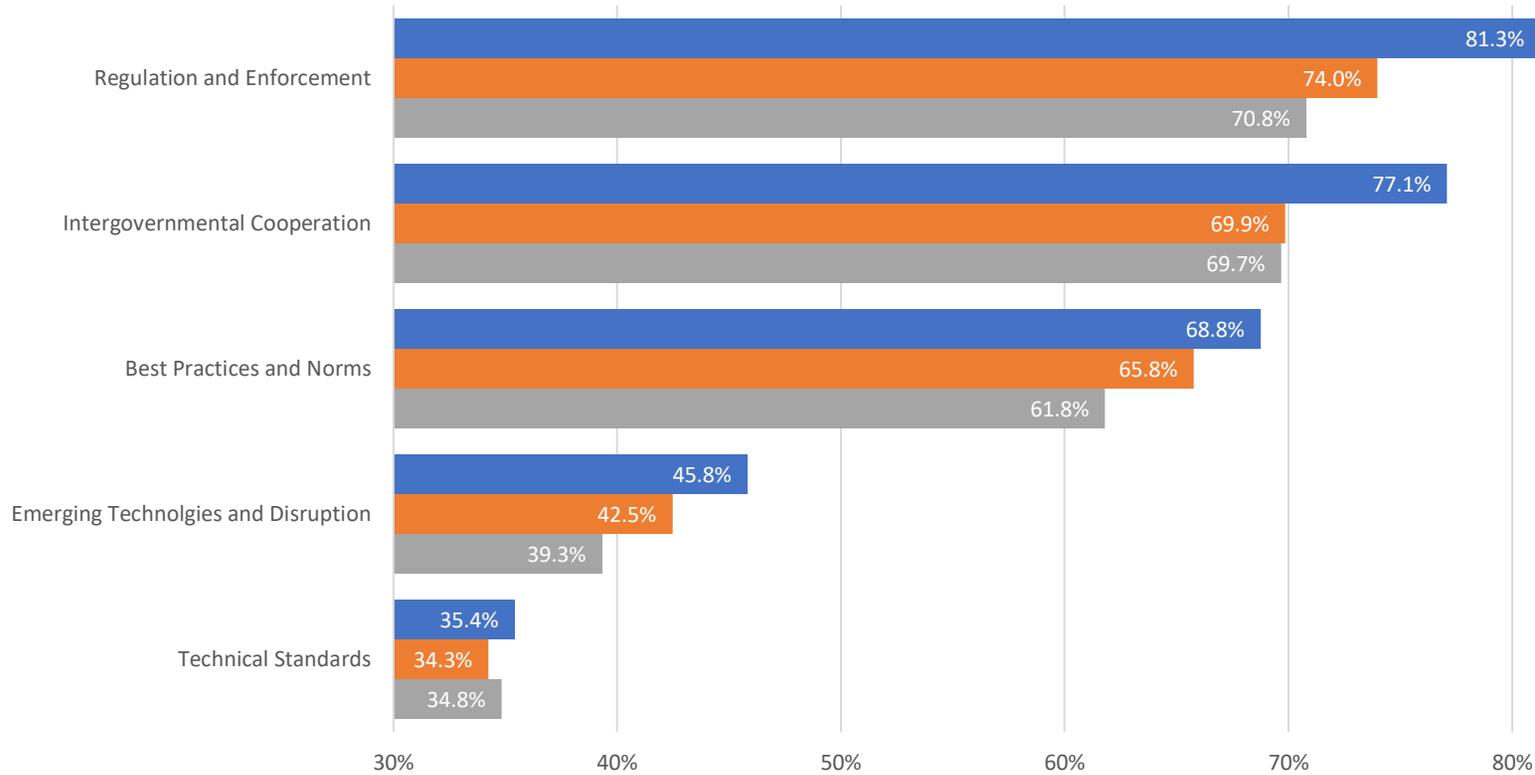

Subject Area Breakdown – Data Governance and Privacy Cross-Cutting Themes

The charts below show the percentage of respondents that selected each theme for the Data Governance and Privacy Subject Area, based on the rating they gave to Data Governance and Privacy in Section 3.

This chart combines the data from the other graphs in this section for easier comparison of results across metrics.

Cross-Cutting Themes in Data Governance and Privacy - Comparison Across Metrics

	Technical Standards	Emerging Technologies and Disruption	Best Practices and Norms	Intergovernmental Cooperation	Regulation and Enforcement
Scored - 8 +	35.4%	45.8%	68.8%	77.1%	81.3%
Scored - 5 +	34.3%	42.5%	65.8%	69.9%	74.0%
All	34.8%	39.3%	61.8%	69.7%	70.8%

■ Scored - 8 + ■ Scored - 5 + ■ All

Data Governance and Privacy Topics

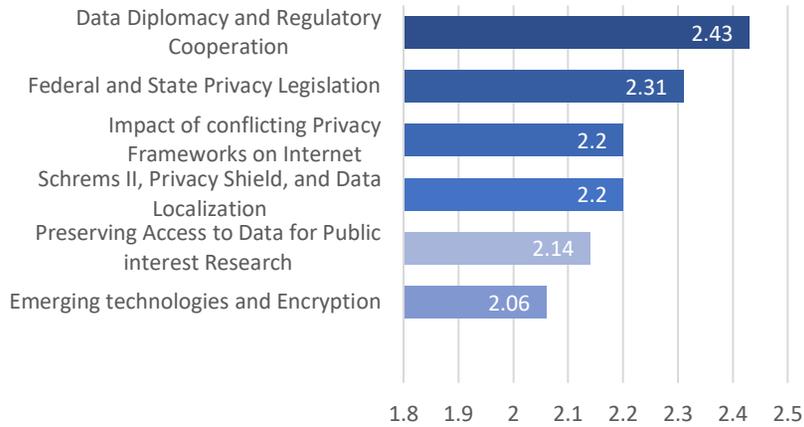

The charts below show the mean scores and response counts for each option, based on the rating they gave to Data Governance and Privacy in Section 3. The point system used to calculate the mean score assigns the following numerical values to each point of the Likert Scale:

- Not Very Important = 1
- Important = 2
- Essential = 3

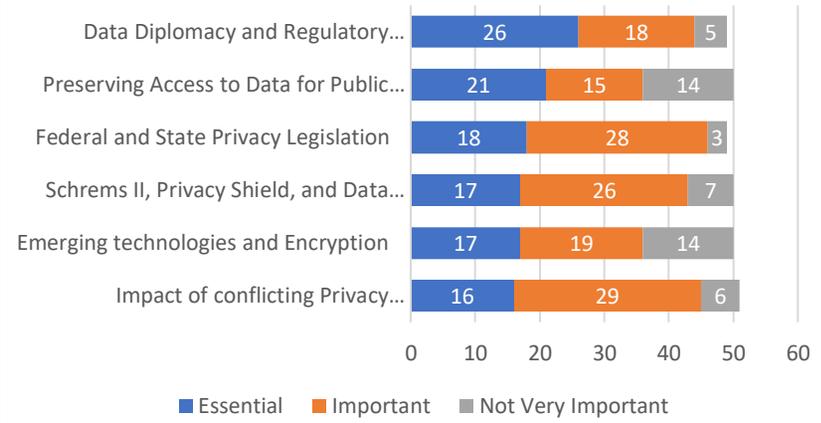

Mean Score - 8 or Higher

Not Very Important = 1; Important = 2; Essential = 3

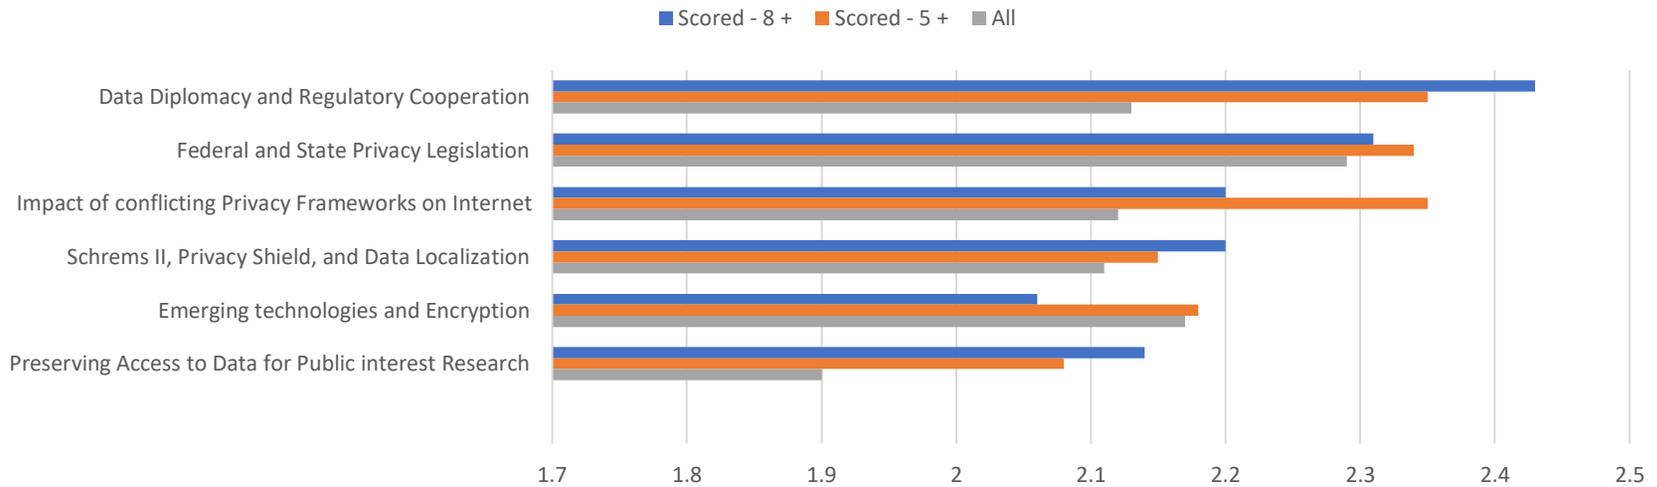

Response Count - 8 or Higher

Breakdown by Response

Mean Scores - Comparison Across Metrics

	Preserving Access to Data for Public interest Research	Emerging technologies and Encryption	Schrems II, Privacy Shield, and Data Localization	Impact of conflicting Privacy Frameworks on Internet	Federal and State Privacy Legislation	Data Diplomacy and Regulatory Cooperation
