

Bathroom Cleaning Checklist

- Remove items that are in the way of the areas that you are planning to clean.
- Spray and soak the tiles. To let the product break down the dirt and disinfect the areas, let it sit for the recommended period instructed on the product label.
- In the meantime, you may want to survey the inventory of your bathroom “stuff,” tossing and if possible recycling the items you don’t need. Put aside the things that you do need. They’ll have to be cleaned and returned where they belong at a later stage.
- Dust your bathroom, moving from top to bottom.
- Clean the walls.
- Clean the toilet.
- Clean tub and shower areas.
- Clean fixtures and mirrors.
- Clean the items that you have relocated in step one and put them back.
- Clean the floor.
