

Food Defense Plans and Vulnerability Assessments (VA's)

Session Overview

Purpose:

- To thoroughly understand the Food Defense capabilities of SF360
- To build an example VA and Food Defense Audit in SF360

Session Leader:

- George Howlett, CEO, Safefood 360

Timing:

- 90 Minutes

Agenda:

- Useful Supporting Information
- What is a Food Defense Plan?
- Three Building Blocks of a Food Defense Plan
 - Vulnerability Assessment (VA)
 - Food Defense Audit
 - Actions Plan
- Practical Exercises

Useful Supporting Information

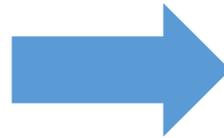

Safefood 360 reference sources of information for Food Defense and Vulnerability Assessments.

FSMA Final Rule for Mitigation Strategies to Protect Food Against Intentional Adulteration

Objective

- The FDA Food Safety Modernization Act (FSMA) final rule is aimed at preventing intentional adulteration.

Requirements

- Rule requires mitigation (risk-reducing) strategies for processes in certain registered food facilities.

Application

- Rule applies to both domestic and foreign companies that are required to register with the FDA.
- Exceptions provided in the final rule.

Approach

- FDA has taken an approach similar to Hazard Analysis Critical Control Point (HACCP) system.
- This written plan must identify vulnerabilities and actionable process steps, mitigation strategies, and procedures for food defense monitoring, corrective actions and verification.

FEDERAL REGISTER

Vol. 81 Friday,
No. 103 May 27, 2016

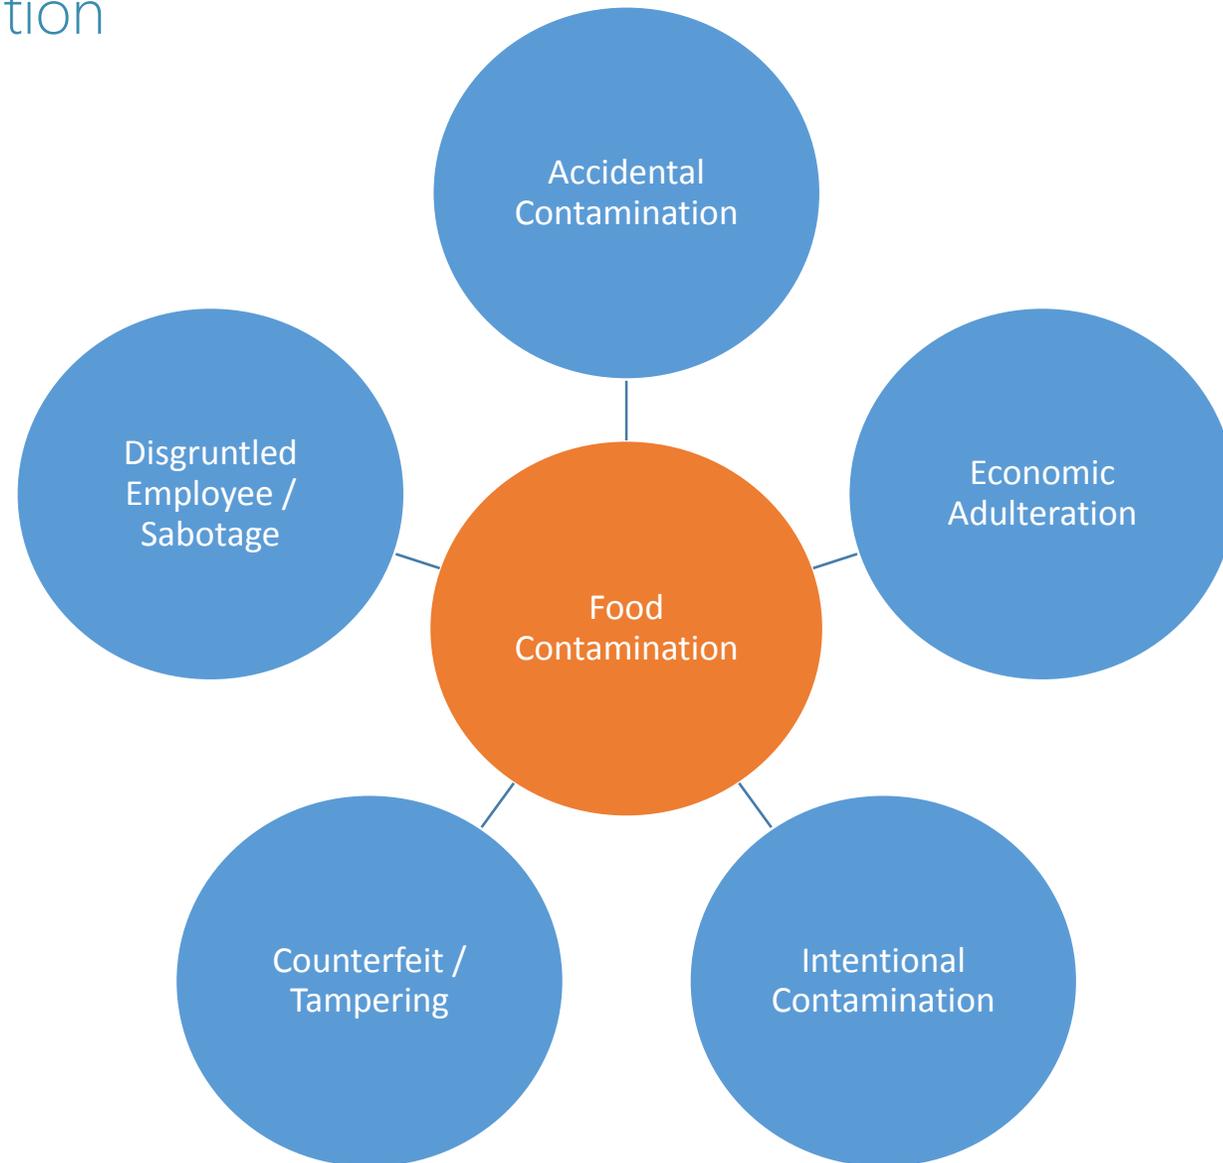

Part IV

Department of Health and Human Services

Food and Drug Administration
21 CFR Parts 11 and 121
Mitigation Strategies To Protect Food Against Intentional Adulteration; Final Rule

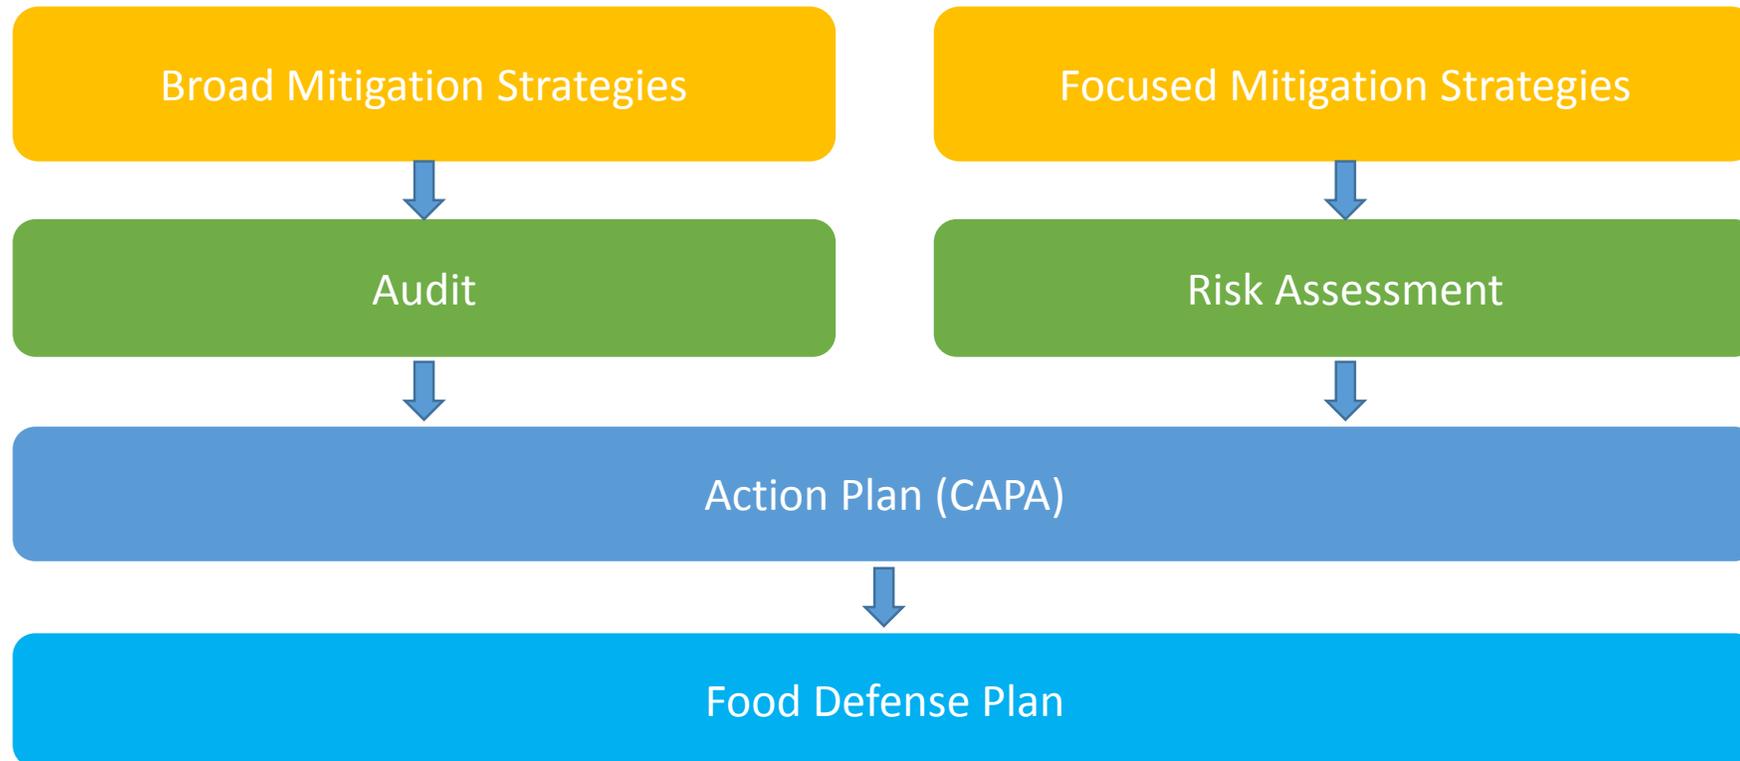

Intentional Adulteration

Elements of a Food Defense Plan

There are two main elements of a food defense plan. An **Audit** to identify broad mitigation strategies and **Risk Assessment** to identify focused mitigation strategies.

Broad Mitigation Strategy - Example

What is it?

- A strategy designed to mitigate risks relating to the general operation.
- Identified in an audit.
- Broad mitigation strategies include security and screening procedures for the facility, materials, and people.

Example

- **SECTION** :: Outside Security - 1. Property Perimeter.
- **MEASURE** :: 1a. Is the property perimeter secured to prevent entry by unauthorized persons (e.g., by security guards, fence, wall, or other physical barriers)?
- **RESPONSE** :: Gap.
- **PLAN CONTENT** :: A fence secures the property perimeter against unauthorized entry. No trespassing signs are posted. The perimeter of the property is patrolled on a regular basis, at least every 30 minutes.
- **ACTION STEP** :: Install a new fence around facility.

Focused Mitigation Strategy - Example

What is it?

- Focused Mitigation Strategies are science-based procedures, practices, or processes to minimize the vulnerabilities.
- Identified in the vulnerability assessment.
- Focused Mitigation Strategies are applied at a specific process step.

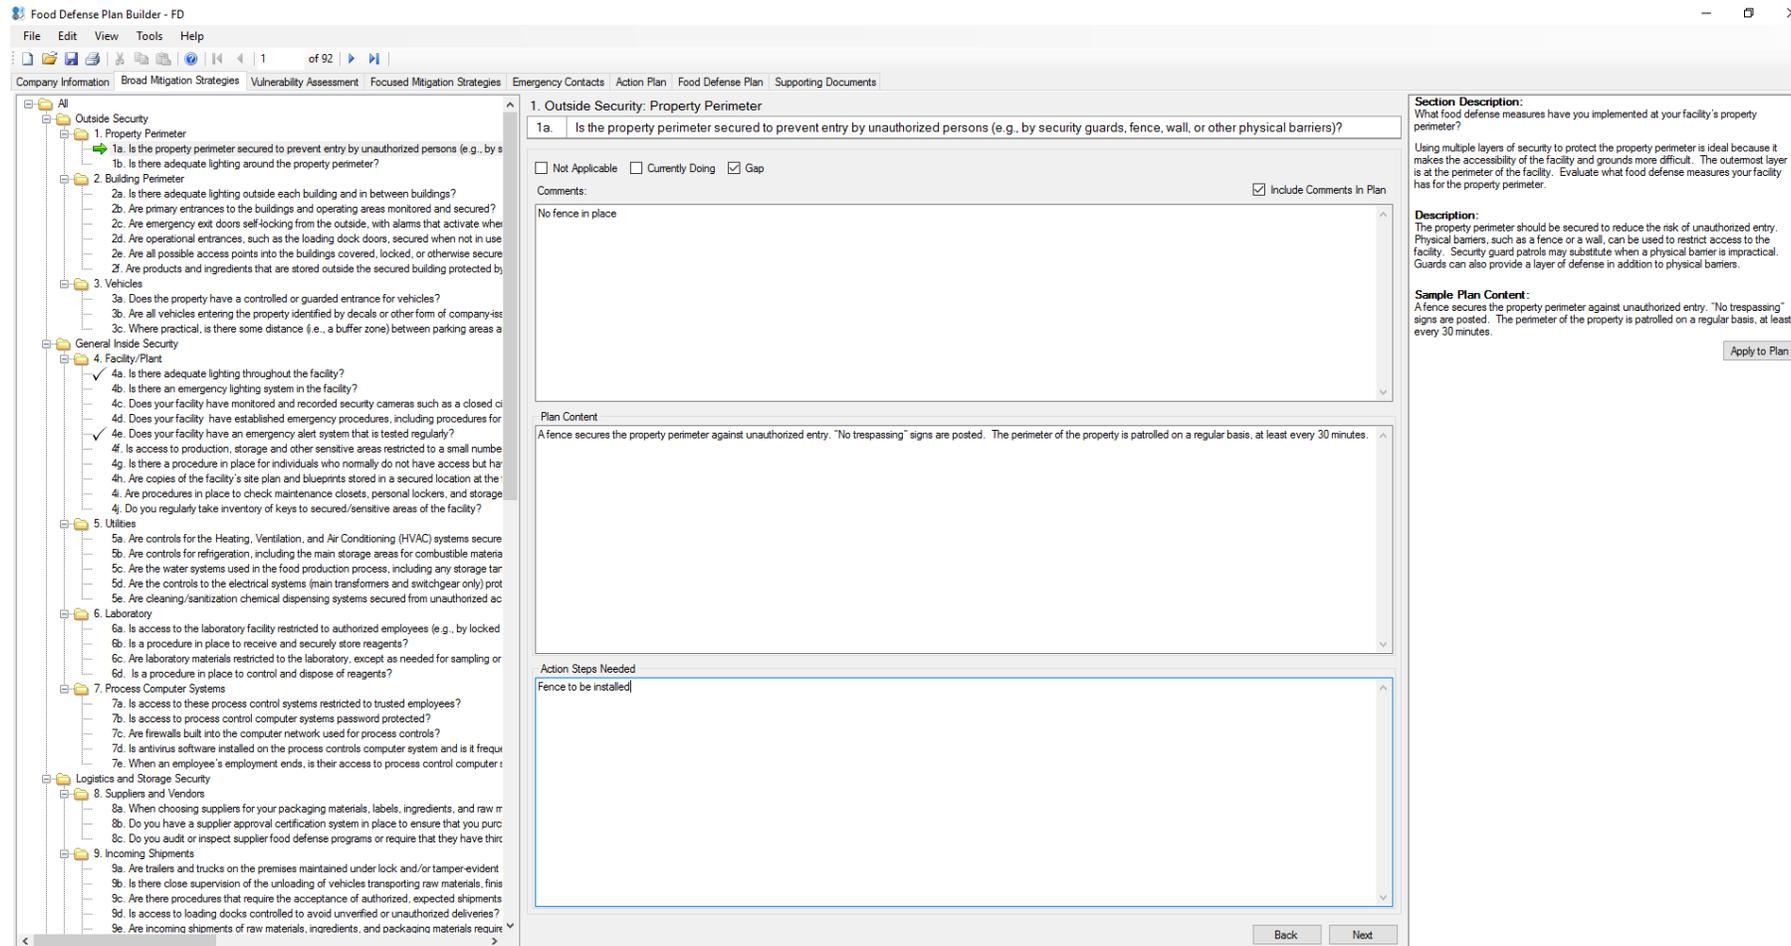

Example

- **PROCESS NAME** :: Cooked Meat
- **PROCESS STEP** :: Cooking
- **ACCESSIBILITY** :: 8
- **VULNERABILITY** :: 10
- **TOTAL** :: 18
- **MITIGATION STRATEGY** :: Restrict access to location to authorized personnel.

Food Defense Plan Builder

The FDA provides a downloadable tool for assist in building Food Defense Plans.

<https://www.fda.gov/Food/FoodDefense/ToolsEducationalMaterials/ucm349888.htm>

The screenshot displays the 'Food Defense Plan Builder - FD' application window. The interface is divided into several sections:

- Left Panel:** A tree view showing the structure of the plan, including categories like 'Outside Security', 'General Inside Security', and 'Logistics and Storage Security'. The '1. Outside Security: Property Perimeter' section is currently selected.
- Center Panel:** A form for question 1a: 'Is the property perimeter secured to prevent entry by unauthorized persons (e.g., by security guards, fence, wall, or other physical barriers)?'. It includes radio buttons for 'Not Applicable', 'Currently Doing', and 'Gap', with 'Gap' selected. A 'Comments' text area contains the text 'No fence in place'. There is also an 'Include Comments In Plan' checkbox.
- Right Panel:** A 'Section Description' box for the selected question. It contains a 'Description' paragraph explaining the purpose of perimeter security, a 'Sample Plan Content' snippet, and an 'Apply to Plan' button.
- Bottom Panel:** An 'Action Steps Needed' box with a text area containing the instruction 'Fence to be installed'.
- Navigation:** 'Back' and 'Next' buttons are located at the bottom right of the interface.

What Else is Required in a Food Defense Plan?

The Final Rule calls for a number of other elements.

RECORDS – Records for monitoring, actions and verification required.

ACTIONS– Actionable process steps to be identified and actions taken.

MONITOR– Establish and implement procedures, including the frequency with which they are to be performed, for monitoring mitigation strategies.

CORRECTIVE ACTION – Using corrective actions if mitigation strategies are not properly implemented.

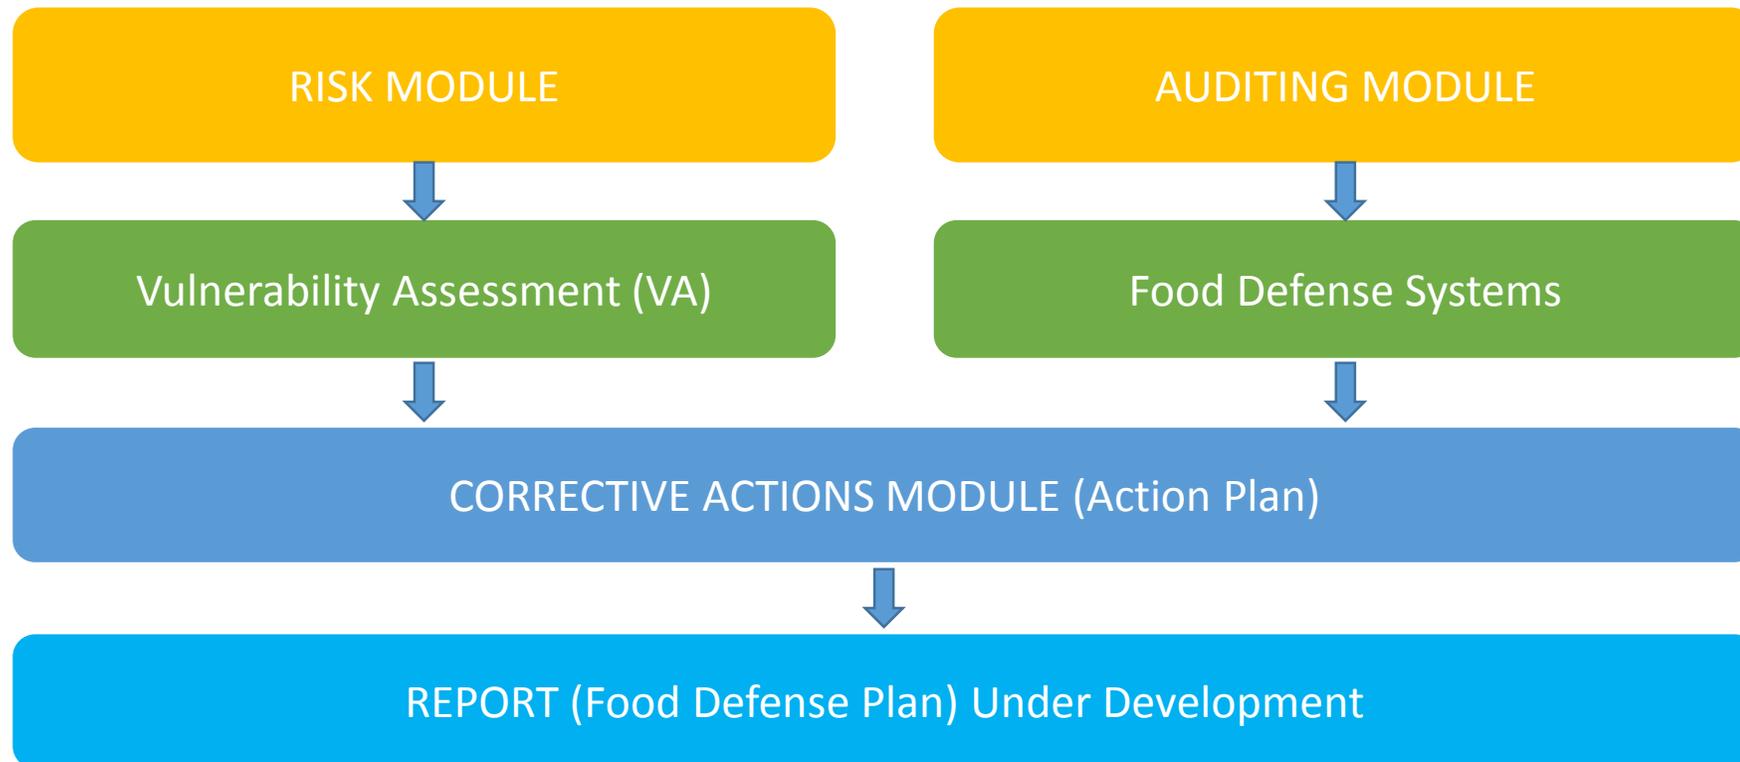

VERIFICATION - Verification activities required to ensure that monitoring is being conducted and appropriate decisions about corrective actions are being made.

TRAINING – Personnel and supervisors assigned to the actionable process steps to be trained in food defense awareness and in their responsibilities for implementing focused mitigation strategies.

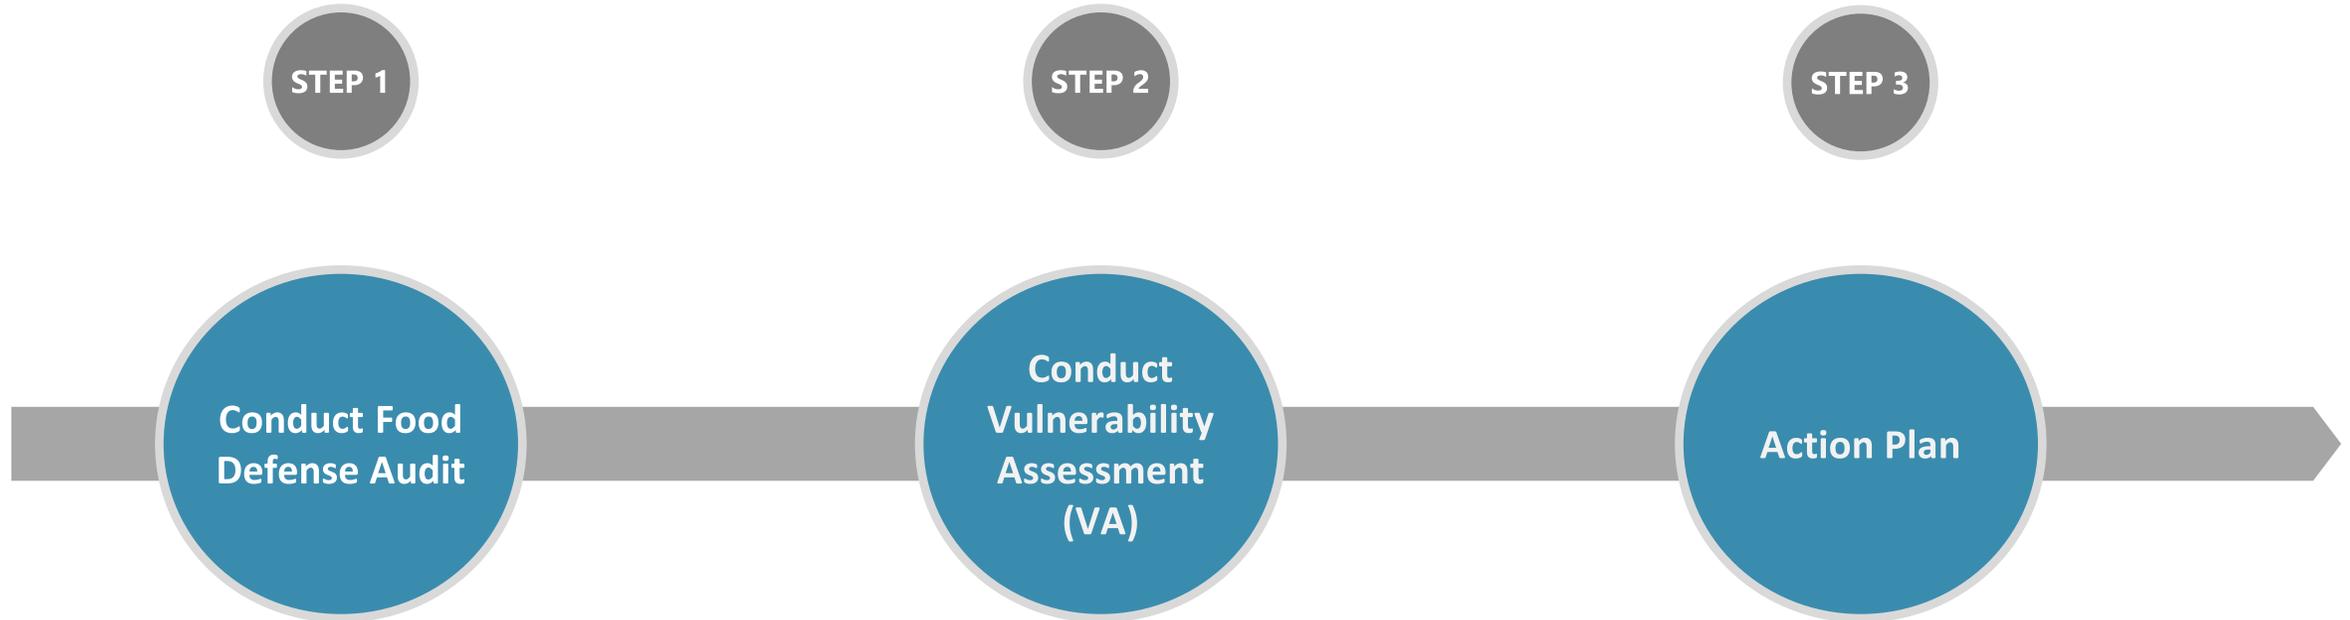

How Does SF360 Build a Food Safety Plan?

Safefood 360 uses three main modules to build a Food Defense Plan. 1) Risk Module 2) Auditing Module 3) Corrective Action. These are combined to give the FDP.

Three Steps to Creating a Food Defense Plan in SF360

There are three key steps in building a full food defense plan in SF360. Conduct Food Defense Audit, Conduct Vulnerability Assessment (VA) and Action Plan Development.

Three Steps to Creating a Food Defense Plan in SF360

There are three key steps in building a full food defense plan in SF360. Conduct Food Defense Audit, Conduct Vulnerability Assessment (VA) and Action Plan Development

Corrective Action Module

- From the previous two activities a full Action Plan will arise.
- This is managed in the Corrective Actions module.
- SF360 is currently developing a full integrated report which will pull together all these elements into one FDA format Food Defense Plan.

Risk - Food Safety Plan Module

- The second step is to conduct a full Vulnerability Assessment (VA) using the Food Safety Plan module.
- This is a similar process to conducting a HACCP or PCP study except vulnerabilities are assessed.
- This will lead to specific monitoring measures and actions as required.

Auditing Module

- The first step is to conduct a food defense audit to identify board mitigation strategies that are required.
- SF360 has the FDA audit checklist already built into the software for easy set-up.
- Once conducted the audit results will allow for the generation of Actions where required.

Conducting a Food Defense (FD) Audit

Food Defense Audits are developed and managed in the **Management** centre under the **Auditing** module.

Add Program

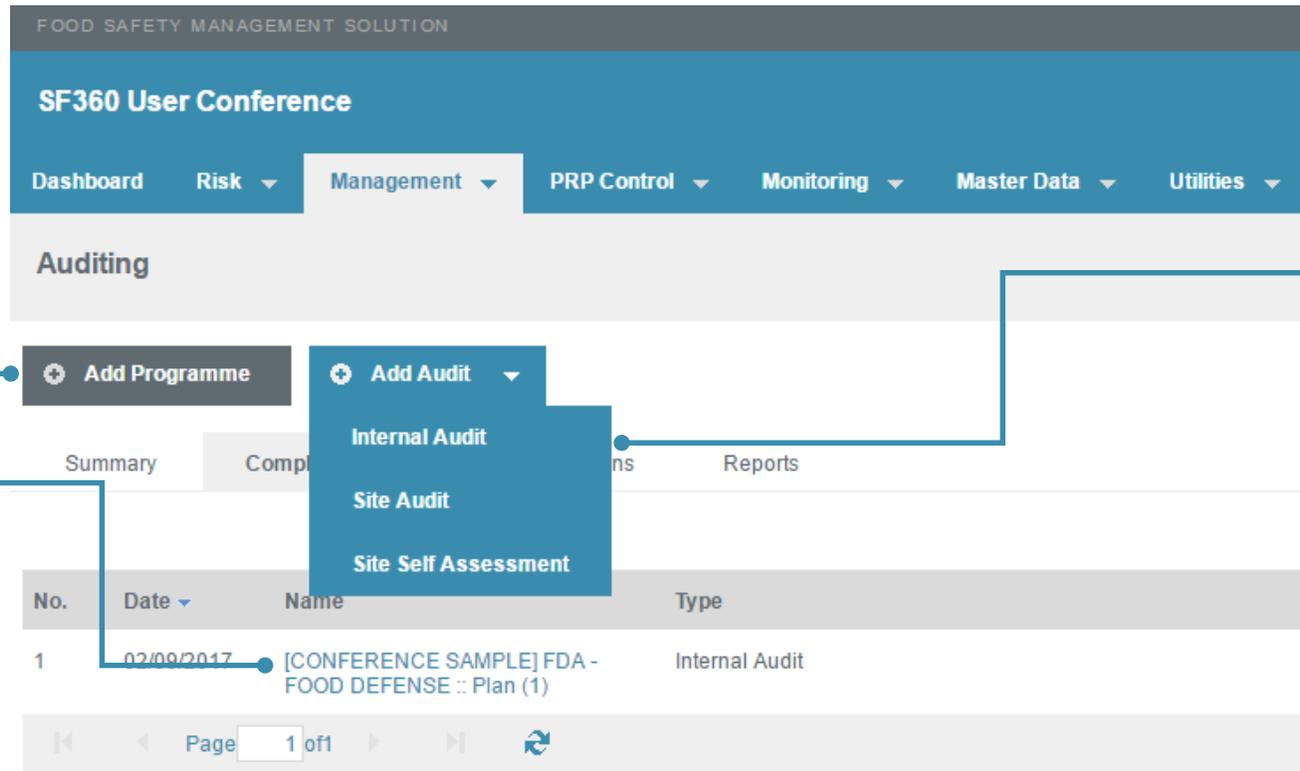

Used to create a new FD Audit Program.

Food Defense Audits

Used to access / view / edit / copy / delete existing FD audits

Add Audit

Used to manually complete a FD audit record

The screenshot shows the 'SF360 User Conference' interface with the 'Management' tab selected. The 'Auditing' section is active, displaying a table of audit records. A dropdown menu is open under the 'Add Audit' button, showing options: 'Internal Audit', 'Site Audit', and 'Site Self Assessment'. A table below shows one record: No. 1, Date 02/09/2017, Name '[CONFERENCE SAMPLE] FDA - FOOD DEFENSE :: Plan (1)', and Type 'Internal Audit'. The page number is 1 of 1.

| No. | Date | Name | Type |
|-----|------------|--|----------------|
| 1 | 02/09/2017 | [CONFERENCE SAMPLE] FDA - FOOD DEFENSE :: Plan (1) | Internal Audit |

Checklists for Food Defense Audits

Master Data > Categories > Checklists

Food Defense Audit Checklist

- The FDA in their Food Defense Plan Builder have defined a checklist of items to be audited.
- The checks cover a wide range of general management procedures and controls which address the facility and its operation.
- These have been built into the standard library of checklists in Safefood 360 and can be selected when building your FD Audit Program.
- The Checklist covers all the elements of the audit and there is no requirement to build your own or modify it.

Checklists for Food Defense Audits

Below is the FDA defined checklists in Safefood 360.

Requirement

These are the FDA defined checks to be conducted

Response

Used to define your findings for the check. The responses are standard and defined by the FDA including
1- Currently Doing; 0-Gap

Observations

Used to record details of the response

| No. | Requirement | Response | Comments / Observations |
|-------------------------|---|---------------------|--|
| OUTSIDE SECURITY | | | |
| 1 | Property Perimeter | | |
| 1a. | Is the property perimeter secured to prevent entry by unauthorized persons (e.g., by security guards, fence, wall, or other physical barriers)? | 1 - Currently Doing | A fence secures the property perimeter against unauthorized entry. "No trespassing" signs are posted. The perimeter of the property is patrolled on a regular basis, at least every 30 minutes. |
| 1b. | Is there adequate lighting around the property perimeter? | 0 - GAP | Exterior lights are installed around the property perimeter. however these lights are not adequate to illuminate the property perimeter to deter and aid in the detection of suspicious or unusual activities. |
| 2. | Building Perimeter | | |
| 2a. | Is there adequate lighting outside each building and in between buildings? | 1 - Currently Doing | Exterior lights are installed outside and in between all buildings. |
| 2b. | Are primary entrances to the buildings and operating areas monitored and secured? | 1 - Currently Doing | All primary entrances to the areas are secured. All doors have property functioning locks or alarms that are checked on a regular basis. |
| 2c. | Are emergency exit doors self-locking from the outside, with alarms that activate when the doors are opened? | 1 - Currently Doing | Emergency exits are installed with self-locking doors and alarms that will sound when emergency exit doors are opened. |
| 2d. | Are operational entrances, such as the loading dock doors, secured when not in use? | 1 - Currently Doing | The loading dock is regularly monitored and doors are secured when not in use. |

Ratings for Food Defense Audits

Master Data > Categories > Ratings

Food Defense Audit Rating Model

- The FDA in their Food Defense Plan Builder have defined how each checklist is recorded. The Options are:
- **1 – Currently Doing** – this means the facility already has the control in place.
- **0- Gap** – this means the facility does not have a control in place to mitigate the vulnerability.
- During the Audit the PCQI will record the status and the value 0 or 1 will be assigned to the check.
- If 0 – Gap then this will not increase the Defense Score.
- If 1 – Currently Doing this will increase the Defense Score by one.
- The values or ratings at the end of the audit are added to give a final Defense Score and Rating e.g. Excellent or Poor Defense.

Ratings for Food Defense Audits

Below is how ratings are summarized in the Food Defense Report.

| Section | Score | Result | Rating | Nonconformances |
|-------------------------|-------------|--------|-------------------|---|
| Overall | 89/92 (97%) | Pass | Excellent Defense | 3 (1 Critical,1 Major,1 Minor,0 Recommendation) |
| OUTSIDE SECURITY | 9/11 (82%) | Pass | Excellent Defense | 2 (1 Critical,0 Major,1 Minor,0 Recommendation) |
| 1. Property Perimeter | 1/2 (50%) | Fail | Poor Defense | 1 (0 Critical,0 Major,1 Minor,0 Recommendation) |
| 2. Building Perimeter | 6/6 (100%) | Pass | Excellent Defense | 0 (0 Critical,0 Major,0 Minor,0 Recommendation) |
| 3. Vehicles | 2/3 (67%) | Pass | Adequate Defense | 1 (1 Critical,0 Major,0 Minor,0 Recommendation) |

Overall Rating

The total Score of the audit is indicated

Section Score

The individual section scores are also indicated

Result

The result is also expressed as Pass or Fail

Rating

The rating is expressed as level of defense

Non-conformances

Indicates the number of non-conformances arising from the audit

Practical Exercise – Create Food Defense Audit Record

Task

Create Food Defense Audit Record

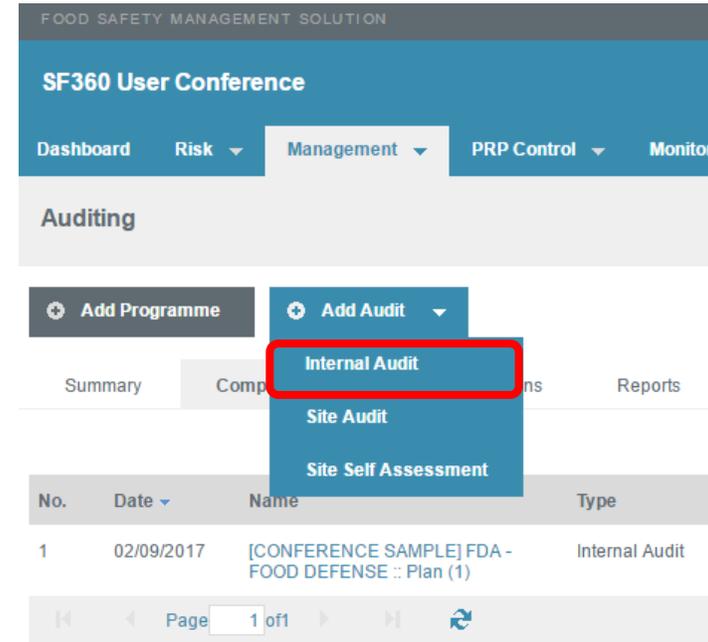

5 minutes

Instructions

- Click **Management > Auditing > Add Audit > Internal Audit**
- Click **[CONFERENCE SAMPLE] FDA – FOOD DEFENSE :: Plan**
- Click **Create**
- Click **Save & Submit**
- Click **Actions > Rename**
- In the Rename field enter your name
- Click **Save**

Conducting a Food Defense Audit – Audit Record Section

Audit Record Section. Complete the audit checklist including responses and additional comments / observations. Actions can be created as required.

| No. | Requirement | Response | Comments / Observations | File | Corrective Action |
|-------------------------|---|---------------------|--|------|-------------------|
| OUTSIDE SECURITY | | | | | |
| 1 | Property Perimeter | | | | |
| 1a. | Is the property perimeter secured to prevent entry by unauthorized persons (e.g., by security guards, fence, wall, or other physical barriers)? | 1 - Currently Doing | A fence secures the property perimeter against unauthorized entry. "No trespassing" signs are posted. The perimeter of the property is patrolled on a regular basis, at least every 30 minutes. | | No |
| 1b. | Is there adequate lighting around the property perimeter? | 0 - GAP | Exterior lights are installed around the property perimeter. however these lights are not adequate to illuminate the property perimeter to deter and aid in the detection of suspicious or unusual activities. | | Yes |

Conducting a Food Defense Audit – Corrective Action Section

Corrective Action Section. Actions arising from the audit are carried over from the previous Audit Record section and can be managed and assigned for completion.

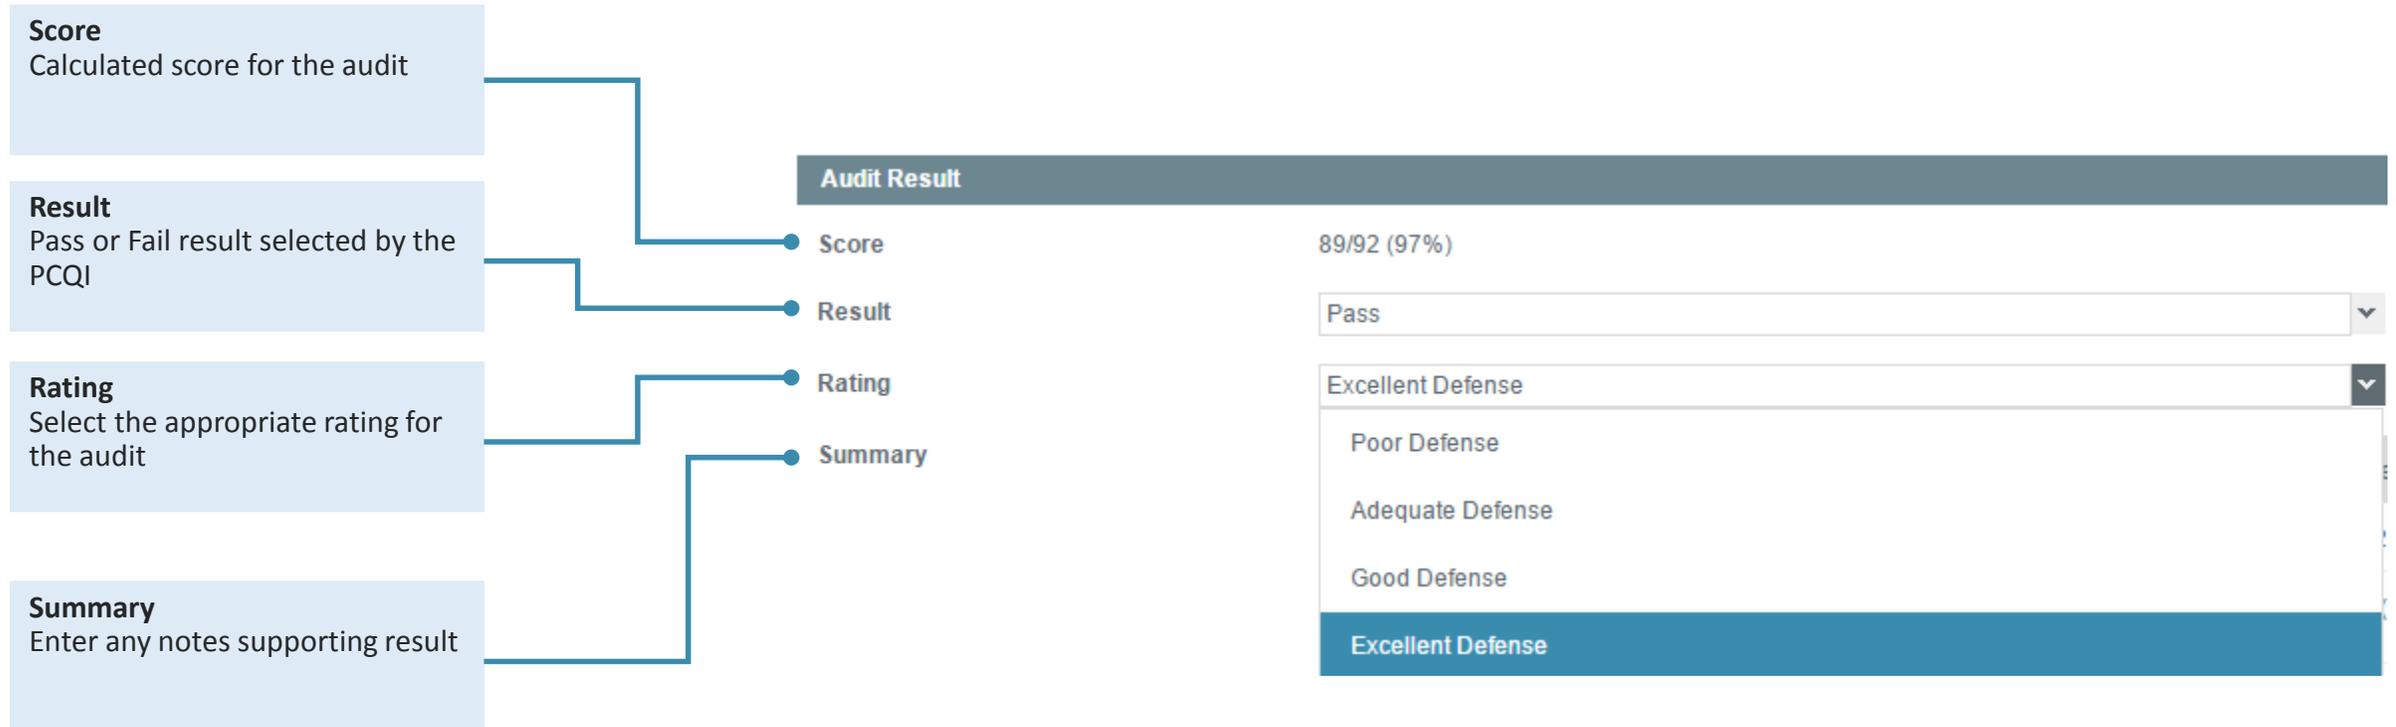

| No. | Requirement | Comments / Observations | Category | Responsible | Due Date | Corrective Action |
|-----|---|--|----------|-----------------|------------|--|
| 1b. | Is there adequate lighting around the property perimeter? | Exterior lights are installed around the property perimeter. however these lights are not adequate to illuminate the property perimeter to deter and aid in the detection of suspicious or unusual activities. | Minor | Silvia Riondino | 02/10/2017 | Awaiting Action Details |
| 3b. | Are all vehicles entering the property identified by decals or other form of company-issued visual identification? This may include forms of permanent identification for employee vehicles, and temporary identification for vehicles belonging to visitors, contract workers, suppliers, and customers. | Some authorized employee and business vehicles do not display a vehicle identification card provided by the company. | Critical | Silvia Riondino | 02/10/2017 | Completed |
| 4j. | Do you regularly take inventory of keys to secured/sensitive areas of the facility? | Physical keys are not issued under controlled conditions | Major | Silvia Riondino | 02/10/2017 | Awaiting Investigation / Root Cause Analysis |

Corrective Action
[Hyperlink to the Corrective Action](#)

Conducting a Food Defense Audit – Result Section

Result Section. Complete the final Food Defense audit result and ratings.

The diagram illustrates the mapping between audit fields and their values in the Safefood 360° interface. On the left, four light blue boxes define the fields: **Score** (Calculated score for the audit), **Result** (Pass or Fail result selected by the PCQI), **Rating** (Select the appropriate rating for the audit), and **Summary** (Enter any notes supporting result). Lines connect these boxes to the corresponding fields in the interface on the right. The interface shows the **Audit Result** section with the following values: **Score** is 89/92 (97%), **Result** is Pass, **Rating** is Excellent Defense, and **Summary** is Excellent Defense.

| Field | Value |
|---------|-------------------|
| Score | 89/92 (97%) |
| Result | Pass |
| Rating | Excellent Defense |
| Summary | Excellent Defense |

Three Steps to Creating a Food Defense Plan in SF360

There are three key steps in building a full food defense plan in SF360. Conduct Food Defense Audit, Conduct Vulnerability Assessment (VA) and Action Plan Development.

Corrective Action Module

- From the previous two activities a full Action Plan will arise.
- This is managed in the Corrective Actions module.
- SF360 is currently developing a full integrated report which will pull together all these elements into one FDA format Food Defense Plan.

Risk - Food Safety Plan Module

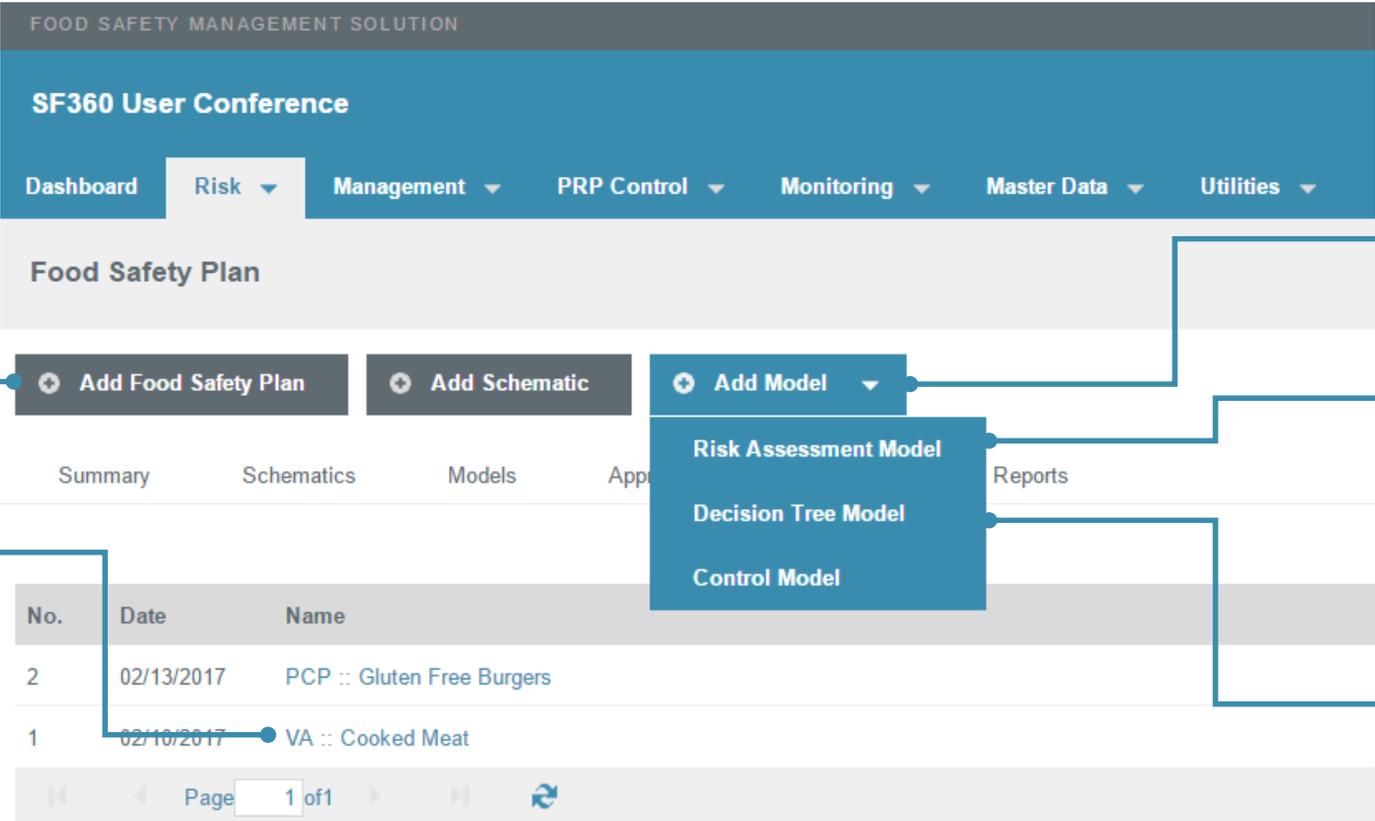

- The second step is to conduct a full Vulnerability Assessment (VA) using the Food Safety Plan module.
- This is a similar process to conducting a HACCP or PCP study except vulnerabilities are assessed.
- This will lead to specific monitoring measures and actions as required.

Auditing Module

- The first step is to conduct a food defense audit to identify board mitigation strategies that are required.
- SF360 has the FDA audit checklist already built in the software for easy set-up.
- Once conducted the audit results will allow for the generation of Actions where required.

Conducting a Vulnerability Assessment (VA)

Vulnerability Assessments are developed and managed in the Risk centre under the Food Safety Plans module.

Risk Assessment Models for VA

Risk > Food Safety Plans > Add Model > Risk Assessment Model

Risk Assessment Model in Vulnerability Assessment

- The FDA have pre-defined a risk assessment model to be used for VA's.
- Safefood 360 have built this into the software for each set up of your VA.
- It is a 5 x 5 matrix model. In this model ratings are added to calculate the final risk score.
- It uses two factors: **Accessibility** (Easy of access to the process step) and **Vulnerability** (Potential for doing damage if access is achieved).

| | | Vulnerability | | | | |
|---------------|--------------------------|--------------------|-----------------------|-------------------------|----------------|------------------------|
| | | Not Vulverable (2) | Barely Vulnerable (4) | Somewhat Vulnerable (6) | Vulnerable (8) | Highly Vulnerable (10) |
| Accessibility | Not Accessible (2) | 4 | 6 | 8 | 10 | 12 |
| | Hardly Accessible (4) | 6 | 8 | 10 | 12 | 14 |
| | Partially Accessible (6) | 8 | 10 | 12 | 14 | 16 |
| | Accessible (8) | 10 | 12 | 14 | 16 | 18 |
| | Easily Accessible (10) | 12 | 15 | 16 | 18 | 20 |

Decision Tree Models for VA

Risk > Food Safety Plans > Add Model > Decision Tree Model

Decision Tree Model in Vulnerability Assessment

- The VA Decision Tree is designed to confirm that a focused mitigation strategy is required.
- Its use follows the identification of a significant vulnerability for a specific process step.
- Two simple questions are used in the standard SF360 model however more complex models can be developed.
- The result will indicate if a Focused Mitigation Strategy is required.

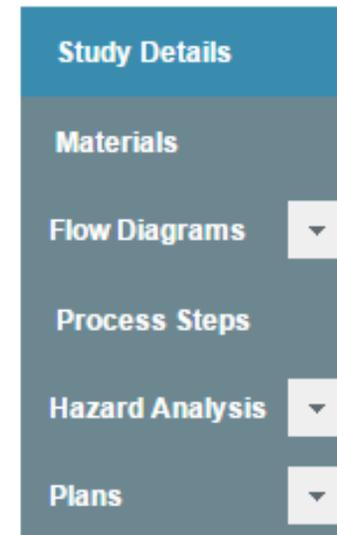

| Decision Tree | | | |
|-----------------|---|--|--------|
| Decision Tree | No. | Question | Answer |
| | 1 | Is there an opportunity to access the product at or just prior to the equipment? | Yes |
| | 2 | A contaminant, if intentionally added, would be distributed into the food? | Yes |
| Result | Focus Mitigation Strategies | | |
| Decision Report | This is an actionable process step, food defense measures can be applied and are essential to prevent or eliminate a significant vulnerability or reduce such vulnerability to an acceptable level. | | |

Vulnerability Assessments (VA's)

Risk > Food Safety Plans > Add Food Safety Plan

Food Safety Plans

- Vulnerability Assessments are created and located in the Risk centre under the Food Safety Plan module.
- PCQI's can build any number of VA's.
- They contain a standard workflow to assist the PCQI in preparing VA's in a structured and systematic way.
- VA's are usually focused on a specific process steps.
- Workflow covers all the requirements for FSMA and the Final Rule.

Practical Exercise – Copy Example VA

Task

Copy Example VA in Safefood 360

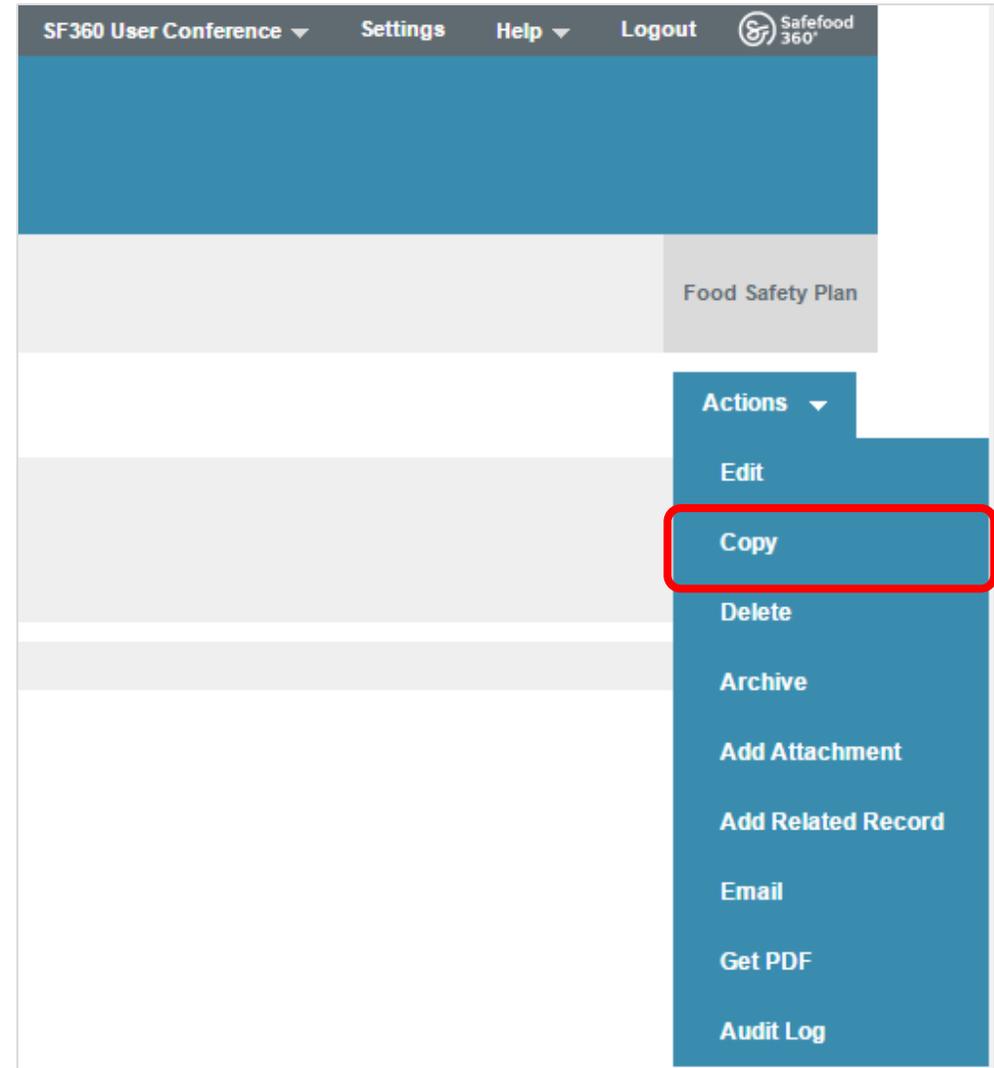

5 minutes

Instructions

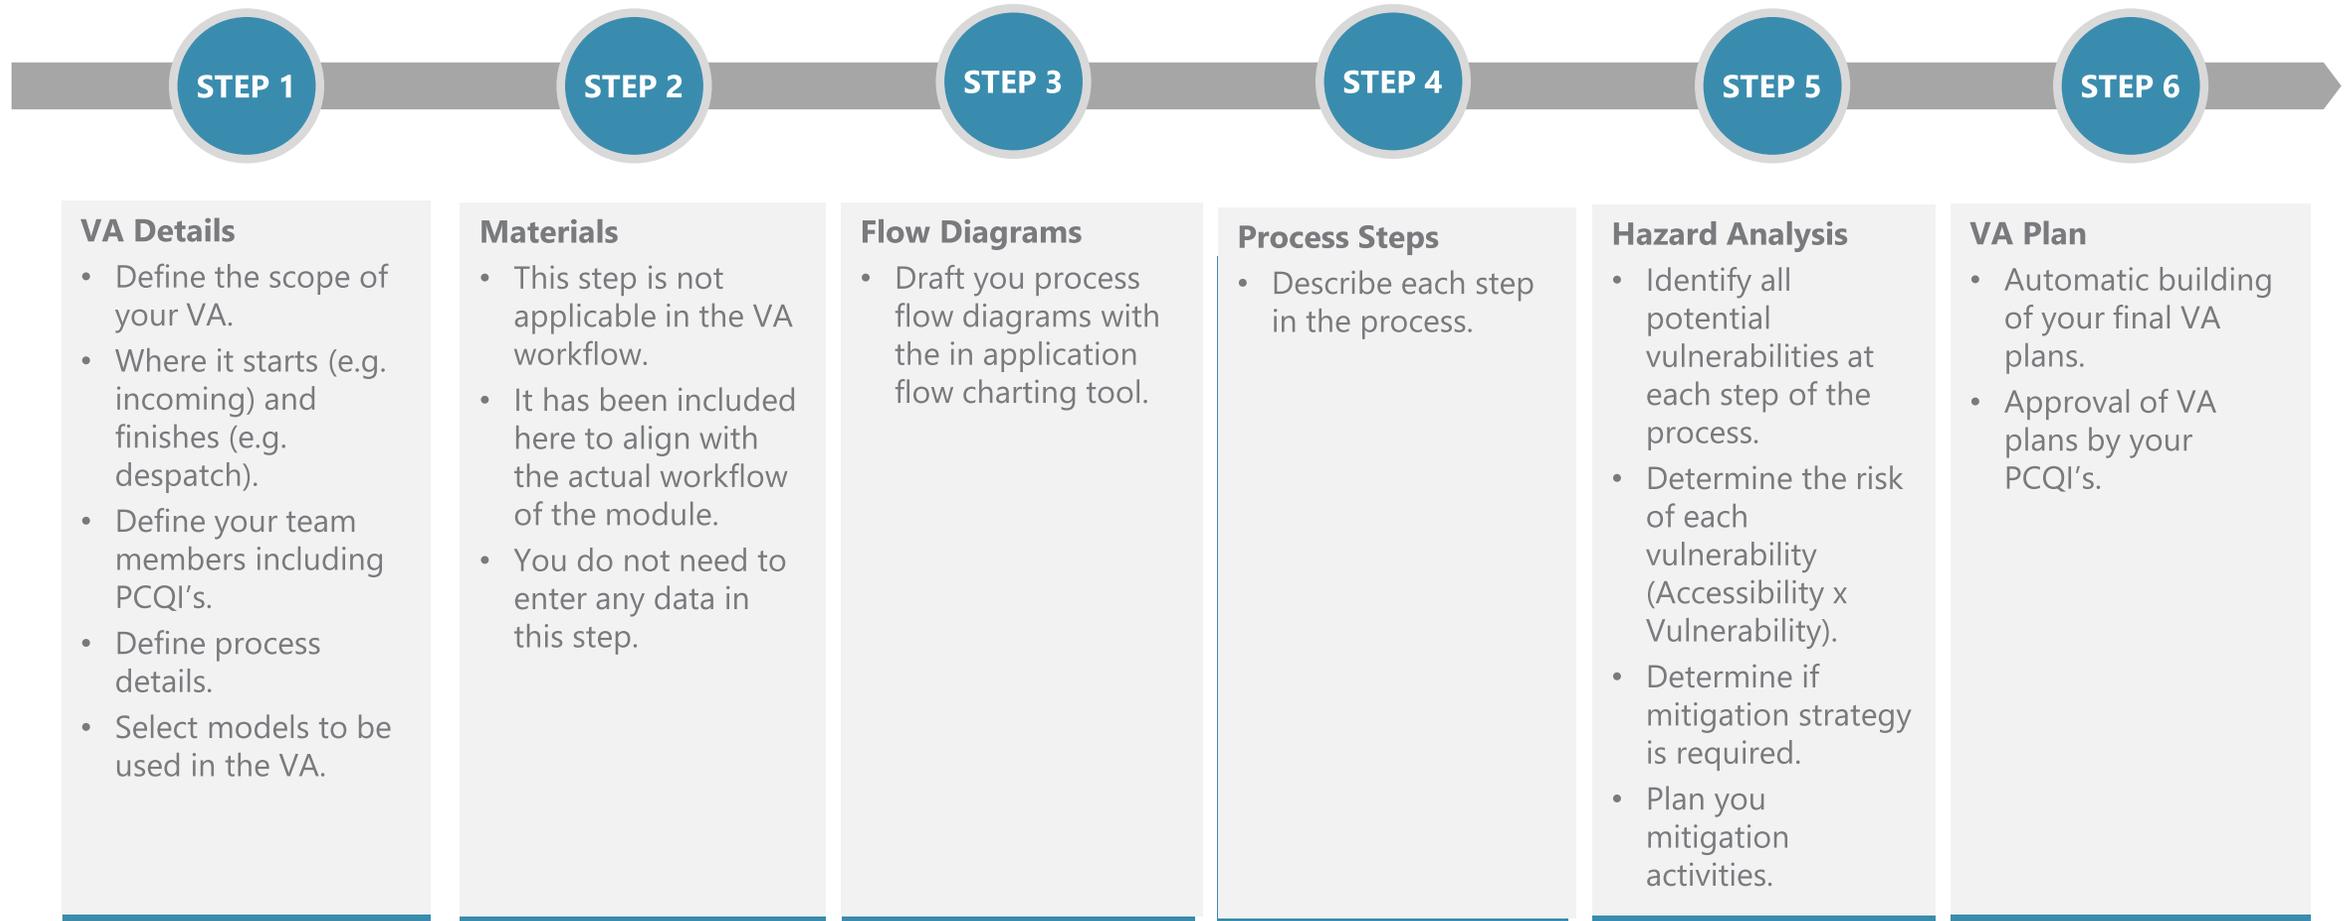

- Click **Risk > Food Safety Plan > Actions (Tab)**
- Click [VA :: Cooked Meat] in the table
- In the VA control page click **Actions > Copy**
- In **Product / Process** field delete the current content and replace with your name e.g. George Howlett
- Scroll to the end of the page and click **Save**

The screenshot shows the Safefood 360° user interface. At the top, there is a navigation bar with 'SF360 User Conference', 'Settings', 'Help', and 'Logout'. Below this is a header for 'Food Safety Plan'. A table is visible, and an 'Actions' dropdown menu is open for a specific record. The 'Copy' option in the dropdown menu is highlighted with a red rectangular box. Other options in the menu include Edit, Delete, Archive, Add Attachment, Add Related Record, Email, Get PDF, and Audit Log.

Steps in Building a VA in Safefood 360

The following details the steps to be followed in the Safefood 360 workflow for developing VA's.

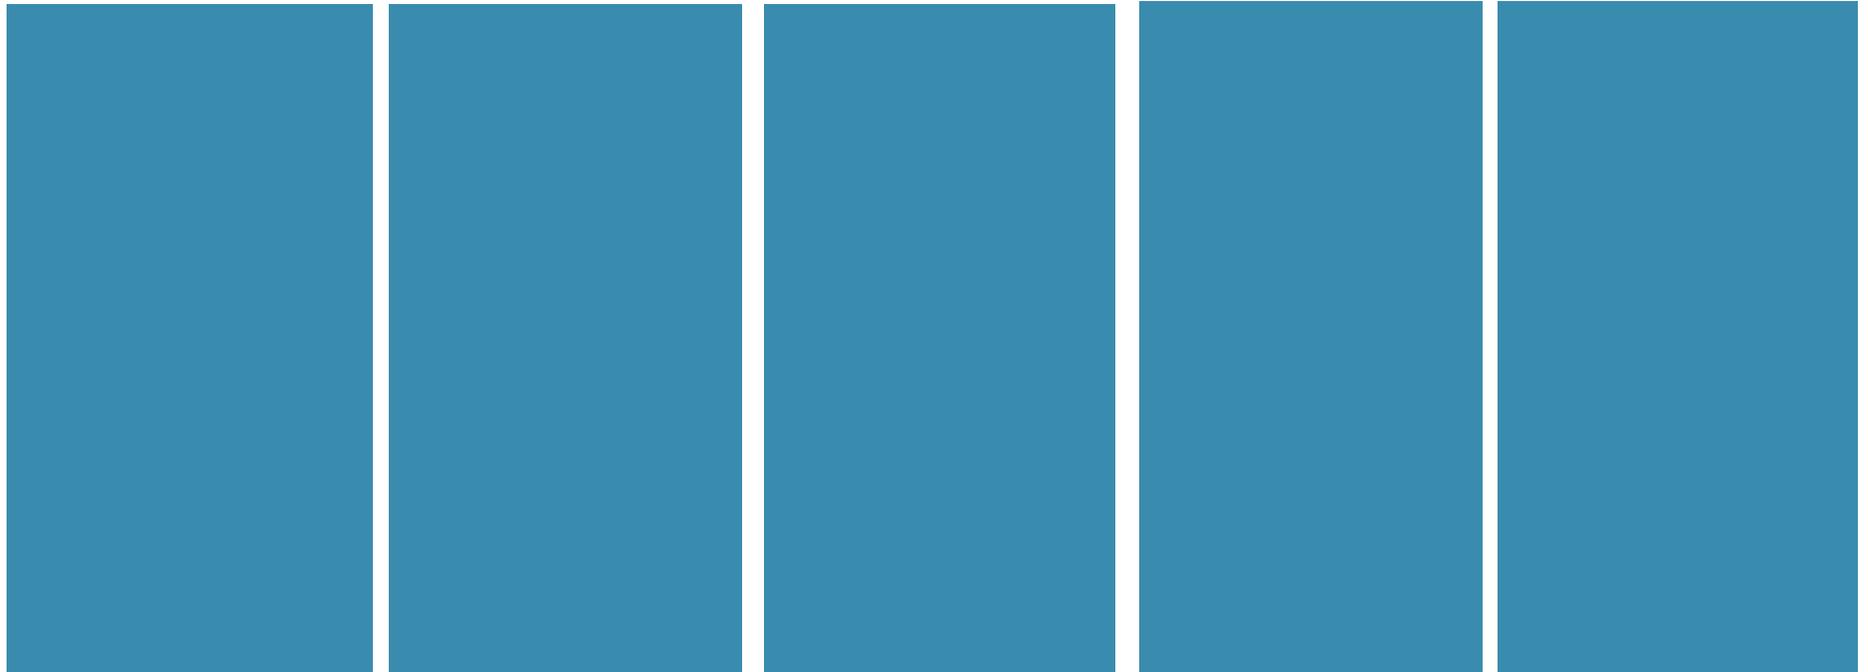

Steps in Building a PCP plan in Safefood 360

The following details the steps to be following in the Safefood 360 workflow for developing PCP plans.

STEP 1

VA Details

- Define the scope of your VA.
- Where it starts (e.g. incoming) and finishes (e.g. despatch).
- Define your team members including PCQI's.
- Define process details.
- Select models to be used in the VA.

STEP 1 :: Build VA – Study Details (Part 1)

Study Details Section. General details of the VA including name.

Product / Process

Define the name of the process under study for VA development

Scope

Define the scope of the VA study. What it covers, where it starts and finishes and what is not included.

Notes

Enter any additional or relevant notes supporting the VA study.

Study Details

Product / Process

VA :: Cooked Meat

Scope

The VA plan covers cooked meat products produced by the company at its premises. Specifically, it covers fully cooked, not shelf stable meat product. The product is boneless and vacuum packed for shipment to the customer. The VA Plan study scope starts at the sourcing and receiving of raw materials and ingredients through processing and packing and finished at distribution and information provision to the consumer.

Notes

The VA plan has been developed in compliance with FDA Regulation.

STEP 1 :: Build VA – Model Details (Part 2)

Model Details Section. Select the required risk assessment and decision tree models which will be used in this VA. Also select those team members responsible for the approval of the VA.

Risk Assessment Model

Select the Risk Assessment Model you wish to use in the VA

Decision Tree Model

Select the Decision Tree Model you wish to use in the VA

Assign Users to Approve

Practical Exercise – Complete Study Details

Task

Complete the Study Details Section of your VA

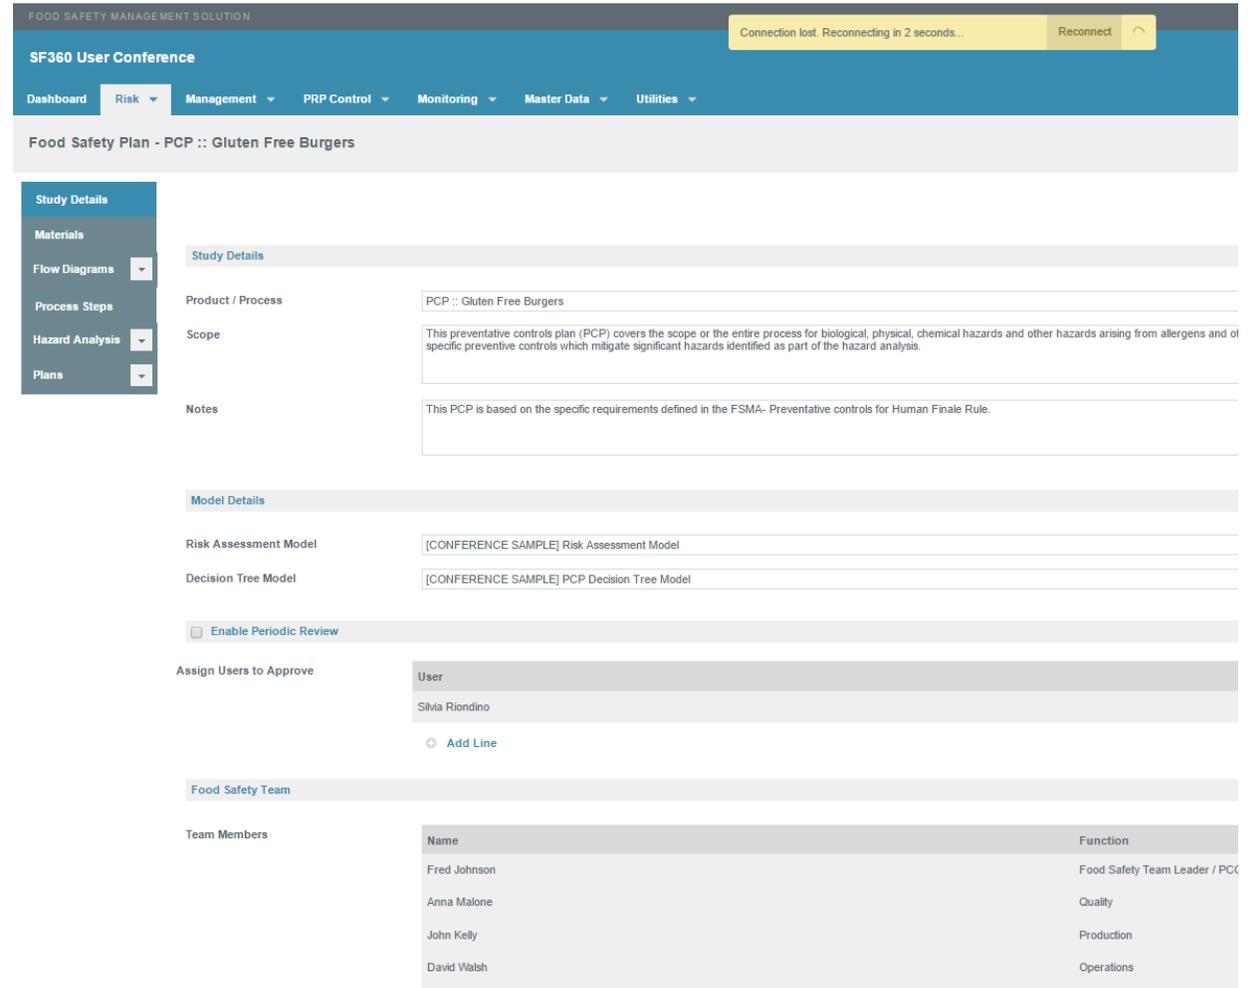

10 minutes

Instructions

- Click **Risk > Food Safety Plan > Actions**
- Click the name of your VA in the table
- Click **Actions > Edit**
- Go to Model Details Section and select the **Risk Assessment Model** for conducting VA's
- Go to **Model Details** section and select the **Decision Tree Model** for conducting VA's
- Scroll to the end of the screen and click **Save**

The screenshot displays the 'SF360 User Conference' interface. The main title is 'Food Safety Plan - PCP :: Gluten Free Burgers'. The left sidebar contains a navigation menu with 'Study Details' selected. The main content area is divided into sections: 'Study Details', 'Model Details', and 'Food Safety Team'. The 'Study Details' section includes fields for 'Product / Process' (PCP :: Gluten Free Burgers), 'Scope' (This preventative controls plan (PCP) covers the scope or the entire process for biological, physical, chemical hazards and other hazards arising from allergens and of specific preventative controls which mitigate significant hazards identified as part of the hazard analysis.), and 'Notes' (This PCP is based on the specific requirements defined in the FSMA- Preventative controls for Human Finale Rule.). The 'Model Details' section includes 'Risk Assessment Model' ([CONFERENCE SAMPLE] Risk Assessment Model) and 'Decision Tree Model' ([CONFERENCE SAMPLE] PCP Decision Tree Model). There is an unchecked checkbox for 'Enable Periodic Review'. The 'Assign Users to Approve' section shows a table with one user: Silvia Rioldino. The 'Food Safety Team' section shows a table with four team members: Fred Johnson (Food Safety Team Leader / PCP), Anna Malone (Quality), John Kelly (Production), and David Walsh (Operations).

| Name | Function |
|--------------|-------------------------------|
| Fred Johnson | Food Safety Team Leader / PCP |
| Anna Malone | Quality |
| John Kelly | Production |
| David Walsh | Operations |

Steps in Building a VA in Safefood 360

The following details the steps to be followed in the Safefood 360 workflow for developing VA's.

STEP 1

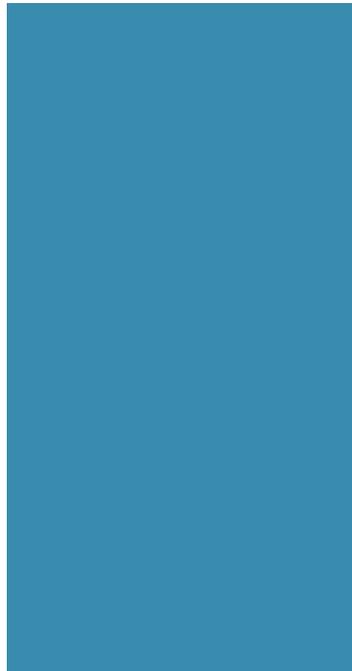

VA Details

- Define the scope of your VA.
- Where it starts (e.g. incoming) and finishes (e.g. despatch).
- Define your team members including PCQI's.
- Define process details.
- Select models to be used in the VA.

STEP 2

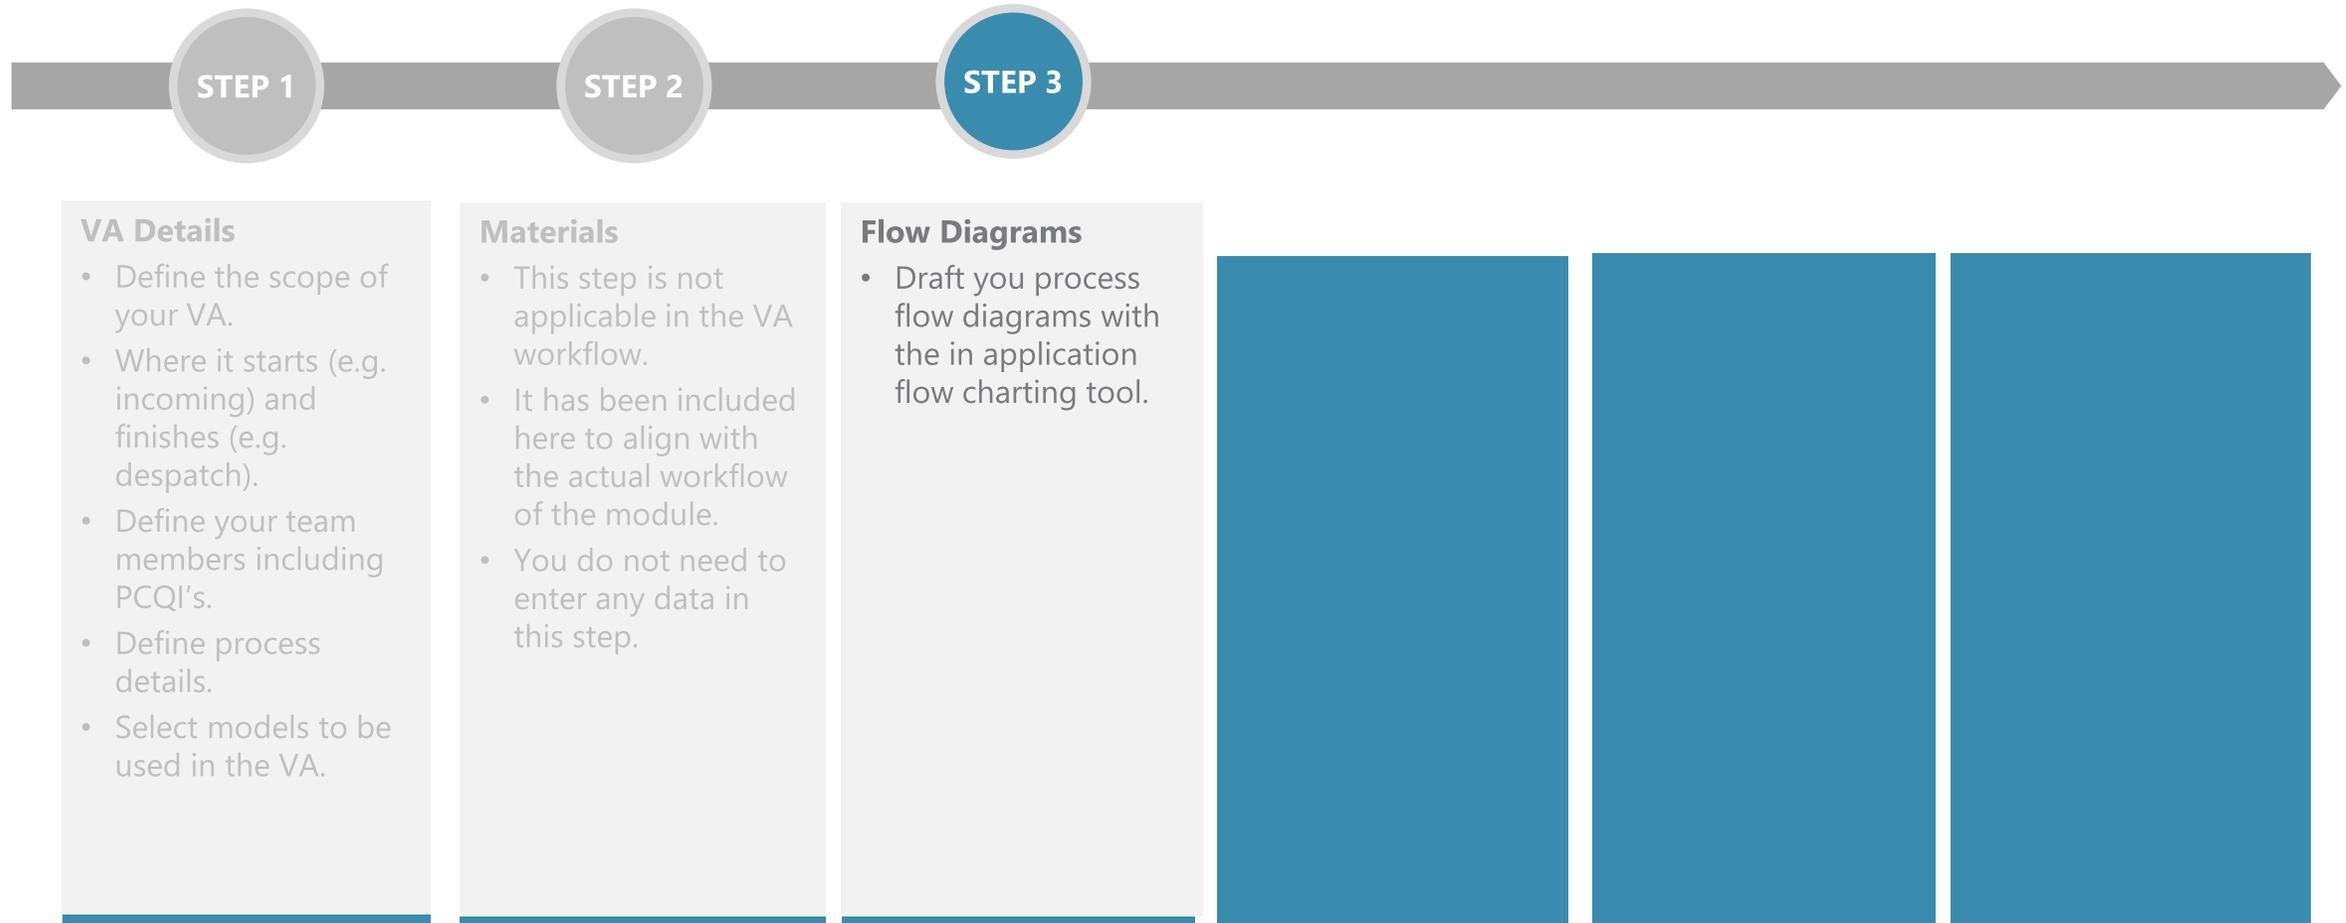

Materials

- This step is not applicable in the VA workflow.
- It has been included here to align with the actual workflow of the module.
- You do not need to enter any data in this step.

The following details the steps to be followed in the Safefood 360 workflow for developing VA's.

STEP 4 :: Build VA – Process Steps

Process Steps Section. In this section of the VA workflow you can describe in detail each process step which will be risk assessed.

Process Steps

Enter the name of the process step

Description

Provide a full description of the process step

Editing

Change the order of steps, add and remove steps

Process Steps

| No. ▲ | Process Steps | Description | | | |
|-------|----------------------------|---|---|---|---|
| 1 | Receiving (Packaging) | Packaging materials including vacuum pouches, cooking bags and labels are delivered and transferred to a dedicated packaging store. | ▲ | ▼ | × |
| 2 | Storage (Packaging) | Materials are stored on pallets and racking in cool dry conditions away from direct sunlight. | ▲ | ▼ | × |
| 3 | Receiving (Ingredients) | Ingredients are received at the plant in a variety of formats | ▲ | ▼ | × |
| 4 | Storage (Ingredients) | Ingredients are stored in a dedicated storage facility of pallets and racks. | ▲ | ▼ | × |
| 5 | Receiving (Raw Meat) | Raw meat is received under chilled conditions. Meat is packed in blue PE bags of 10kg units in Dolav storage units. | ▲ | ▼ | × |
| 6 | Chill Storage (32 - 41 °F) | Meat is immediately transferred to a chilled raw meat store at maximum 41 °F. | ▲ | ▼ | × |

Practical Exercise – Add a Process Step

Task

Add a process step

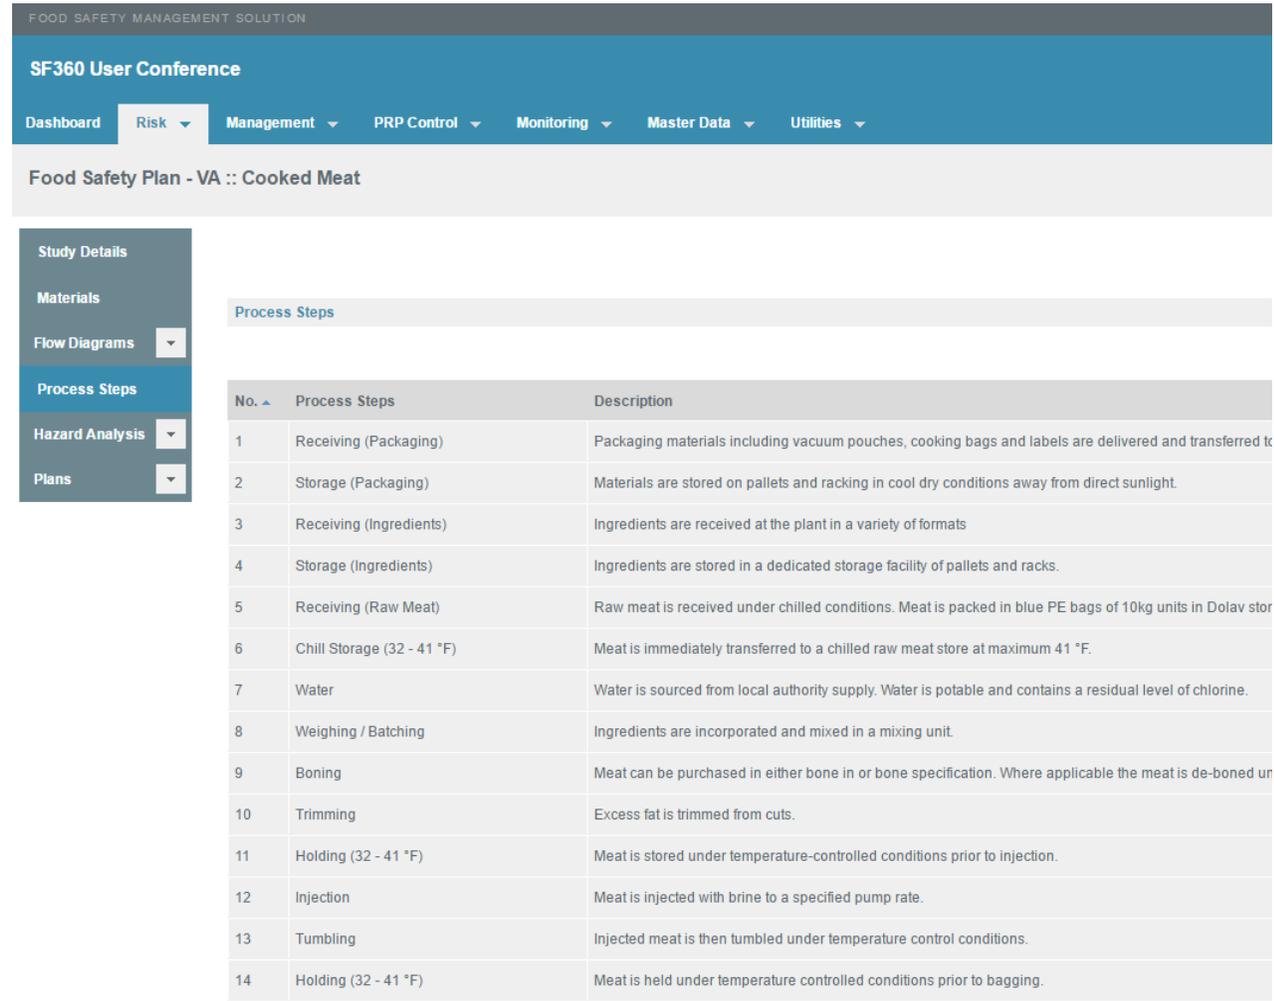

10 minutes

Instructions

- Click **Risk > Food Safety Plan > Actions**
- Click the name of your VA in the table
- Click **Actions > Edit**
- Click **Process Steps**
- Click **Add Line** to add a new process step
- Enter the **Name** of the process step
- Enter the **Description** of the process step
- Click **Save**

| 1 | Receiving (Packaging) | Packaging materials including vacuum pouches, cooking bags and labels are delivered and transferred to |
| 2 | Storage (Packaging) | Materials are stored on pallets and racking in cool dry conditions away from direct sunlight. |
| 3 | Receiving (Ingredients) | Ingredients are received at the plant in a variety of formats |
| 4 | Storage (Ingredients) | Ingredients are stored in a dedicated storage facility of pallets and racks. |
| 5 | Receiving (Raw Meat) | Raw meat is received under chilled conditions. Meat is packed in blue PE bags of 10kg units in Dolav stor |
| 6 | Chill Storage (32 - 41 °F) | Meat is immediately transferred to a chilled raw meat store at maximum 41 °F. |
| 7 | Water | Water is sourced from local authority supply. Water is potable and contains a residual level of chlorine. |
| 8 | Weighing / Batching | Ingredients are incorporated and mixed in a mixing unit. |
| 9 | Boning | Meat can be purchased in either bone in or bone specification. Where applicable the meat is de-boned un |
| 10 | Trimming | Excess fat is trimmed from cuts. |
| 11 | Holding (32 - 41 °F) | Meat is stored under temperature-controlled conditions prior to injection. |
| 12 | Injection | Meat is injected with brine to a specified pump rate. |
| 13 | Tumbling | Injected meat is then tumbled under temperature control conditions. |
| 14 | Holding (32 - 41 °F) | Meat is held under temperature controlled conditions prior to bagging. |

Steps in Building a VA in Safefood 360

The following details the steps to be followed in the Safefood 360 workflow for developing VA's.

STEP 5 :: Build VA – Hazard Analysis – Hazard Details Section

Hazard Details Section. In this section of the VA workflow you can identify vulnerabilities which may exist in the process for each process step.

Process Step
Displays name of the process step

Hazard / Issue Category
Select the category of hazard e.g. quality / other

Nature
Select the nature of the hazard e.g. adulteration / deliberate contamination

Details / Source
Describe in more detail the hazard including the source of the hazard

Hazard Detail:

Process Steps: 6 - Chill Storage (32 - 41 °F)

Hazard / Issue Category: Quality / Other

Nature: Adulteration / Deliberate Contamination

Details / Source: The product has limited exposure points but contamination can occur by an unauthorized personnel.

Hazard / Issue

| Hazard / Issue | Description | |
|---|---|---|
| Intentional contamination/adulteration (Other) | Intentional contamination is a deliberate action to introduce something into a product, often with the intention to do harm to the consumer, the company or both. | ✖ |
| + Add Line | | |

Preventive Measure(s)

| Control | Notes | |
|---|---|---|
| Other | Vulnerability Assessment: process of identifying and prioritizing the weaknesses in a food operation. VA it is used to identify specific points (or actionable process steps) in the food supply chain where intentional contamination has the greatest potential to cause harm. You may consider what interventions are already in place that might thwart an attack. | ✖ |
| + Add Line | | |

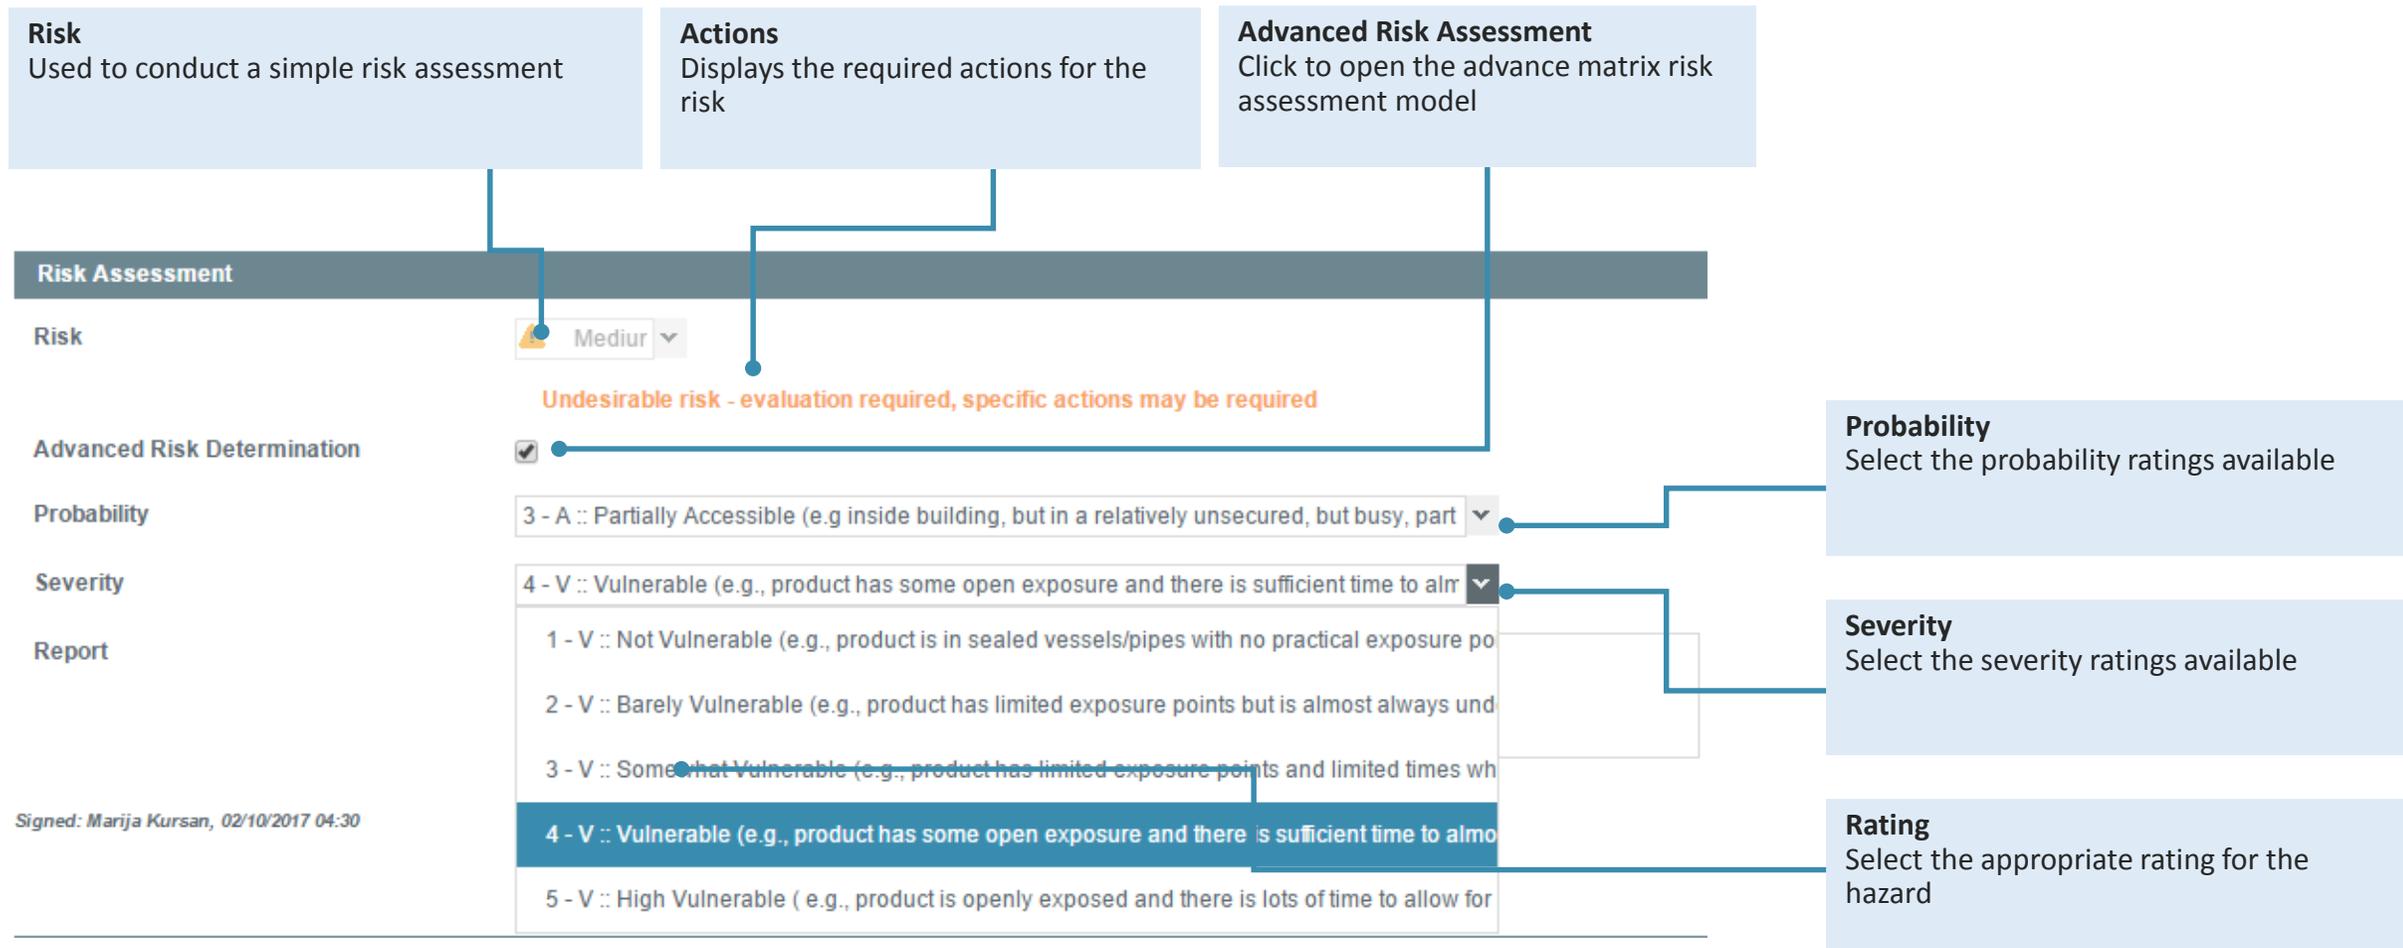

Description
Details of the hazard selected

Hazard / Issue
Select the Hazard(s) identified. You can add one or more hazards by using the Add Line button

Preventive Measures
Enter details of existing preventive measures

STEP 5 :: Build VA – Hazard Analysis – Risk Assessment Section

Risk Assessment Section. In this section the PCQI can risk assess the hazard at the specific step to determine if it is significant.

The screenshot shows the Risk Assessment section of the Safefood 360° interface. It includes a 'Risk' dropdown set to 'Mediur', an 'Advanced Risk Determination' checkbox, and dropdown menus for 'Probability' (3 - A :: Partially Accessible) and 'Severity' (4 - V :: Vulnerable). A 'Report' section lists five severity levels, with '4 - V :: Vulnerable' selected. Callout boxes provide definitions for 'Risk', 'Actions', 'Advanced Risk Assessment', 'Probability', 'Severity', and 'Rating'.

Risk
Used to conduct a simple risk assessment

Actions
Displays the required actions for the risk

Advanced Risk Assessment
Click to open the advance matrix risk assessment model

Risk Assessment

Risk
Mediur

Advanced Risk Determination

Probability
3 - A :: Partially Accessible (e.g inside building, but in a relatively unsecured, but busy, part

Severity
4 - V :: Vulnerable (e.g., product has some open exposure and there is sufficient time to alr

Report

- 1 - V :: Not Vulnerable (e.g., product is in sealed vessels/pipes with no practical exposure po
- 2 - V :: Barely Vulnerable (e.g., product has limited exposure points but is almost always und
- 3 - V :: Somewhat Vulnerable (e.g., product has limited exposure points and limited times wh
- 4 - V :: Vulnerable (e.g., product has some open exposure and there is sufficient time to almo**
- 5 - V :: High Vulnerable (e.g., product is openly exposed and there is lots of time to allow for

Probability
Select the probability ratings available

Severity
Select the severity ratings available

Rating
Select the appropriate rating for the hazard

Signed: Marija Kursan, 02/10/2017 04:30

STEP 5 :: Build VA – Hazard Analysis – Decision Tree Section

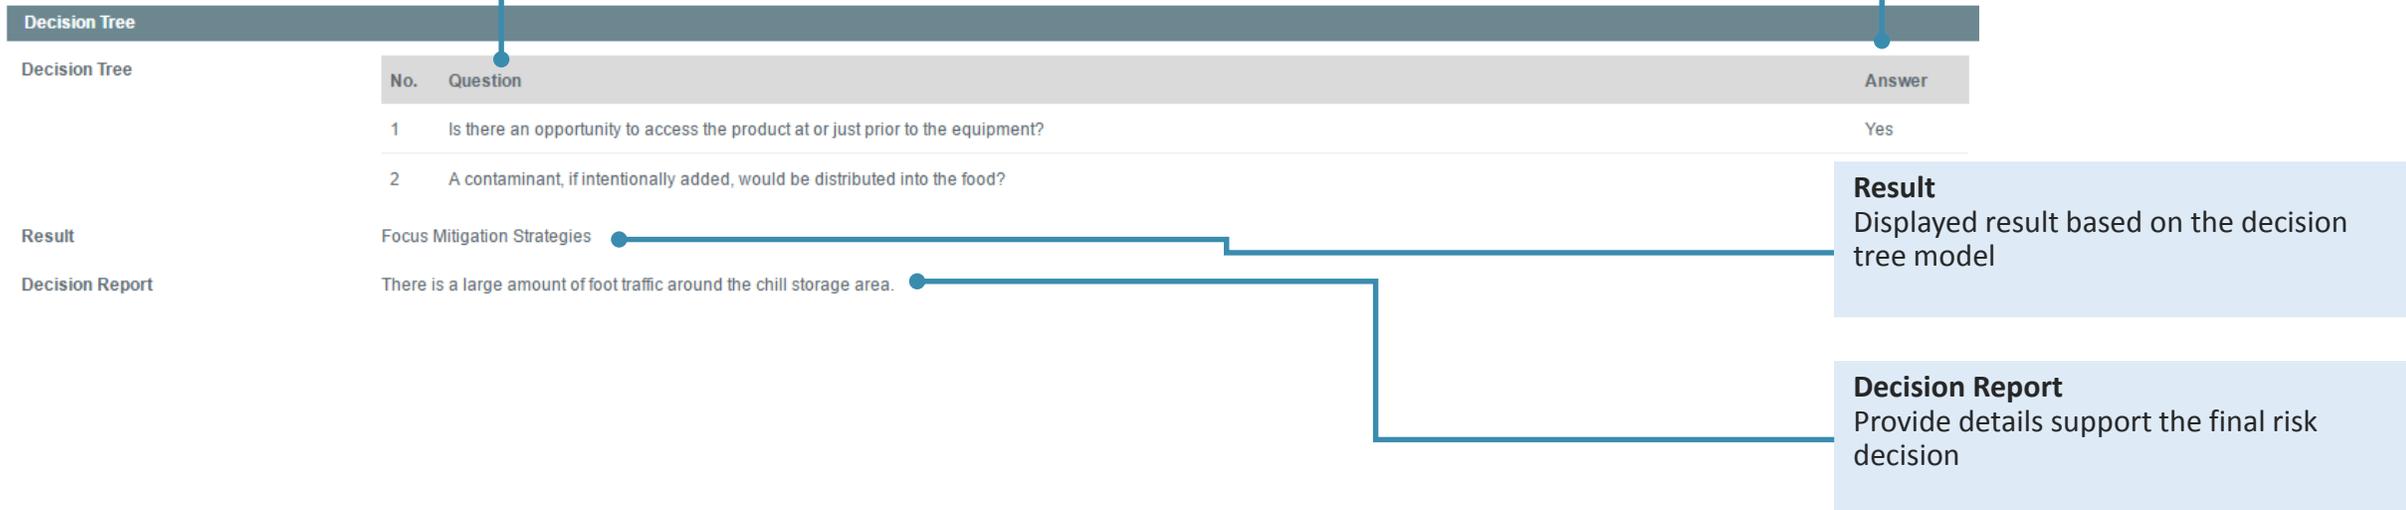

Decision Tree Section. In this section the PCQI can determine if mitigation strategies are required.

Question

Used to direct the PCQI to answer a question regarding the nature of the risk

Answer

PCQI selects Yes or No. Each answer will either direct the user to another question or produce a final Result

STEP 5 :: Build VA – Hazard Analysis – Monitoring Details Section

Monitoring Details Section. In this section the PCQI can detail the mitigation strategies and monitoring details.

The screenshot shows the 'Monitoring Details' section of the software. It features a table with columns for Control, Control Limit, How, Responsible, Frequency, Corrective Action, Record, and Verification. A callout box points to the 'Name' field, which contains the text 'Chill storage restricted access'. Below the table are two buttons: 'Add Line' and 'Add Control'. A 'Verification' callout box points to the 'Verification' column of the table.

| Control | Control Limit | How | Responsible | Frequency | Corrective Action | Record | Verification |
|---|---------------------------|---|--------------------------|--------------|--|------------------|--------------|
| Question people's purpose in the chill storage. Make sure the workers know who has authorization and who doesn't. | Authorized personnel only | Use an alarm system to secure access to location. | Intake/ Despatch Manager | At all times | Remove unauthorized personnel. Review product in the area for tampering. | Sample Procedure | Audits |

Control
Enter the name of the mitigation measure

Control Limit
Enter the control specification / limit

How
Enter the method for monitoring

Responsible
Enter the role responsible for the control

Frequency
Enter the frequency at which check is conducted

Corrective Action
Enter the corrective action to be taken if limits are exceeded

Record
Select the record or SF360 program where monitoring data on the control is maintained

Add Line
Click to add an additional mitigation

Add Control
Click to add a standard mitigation strategy from the list of pre-built mitigations in the software.

Verification
Enter details of the verification activities regard this mitigation measure

Practical Exercise – Add New Hazard and Complete

Task

Add new hazard to the VA and complete details

15 - 20 minutes

Instructions

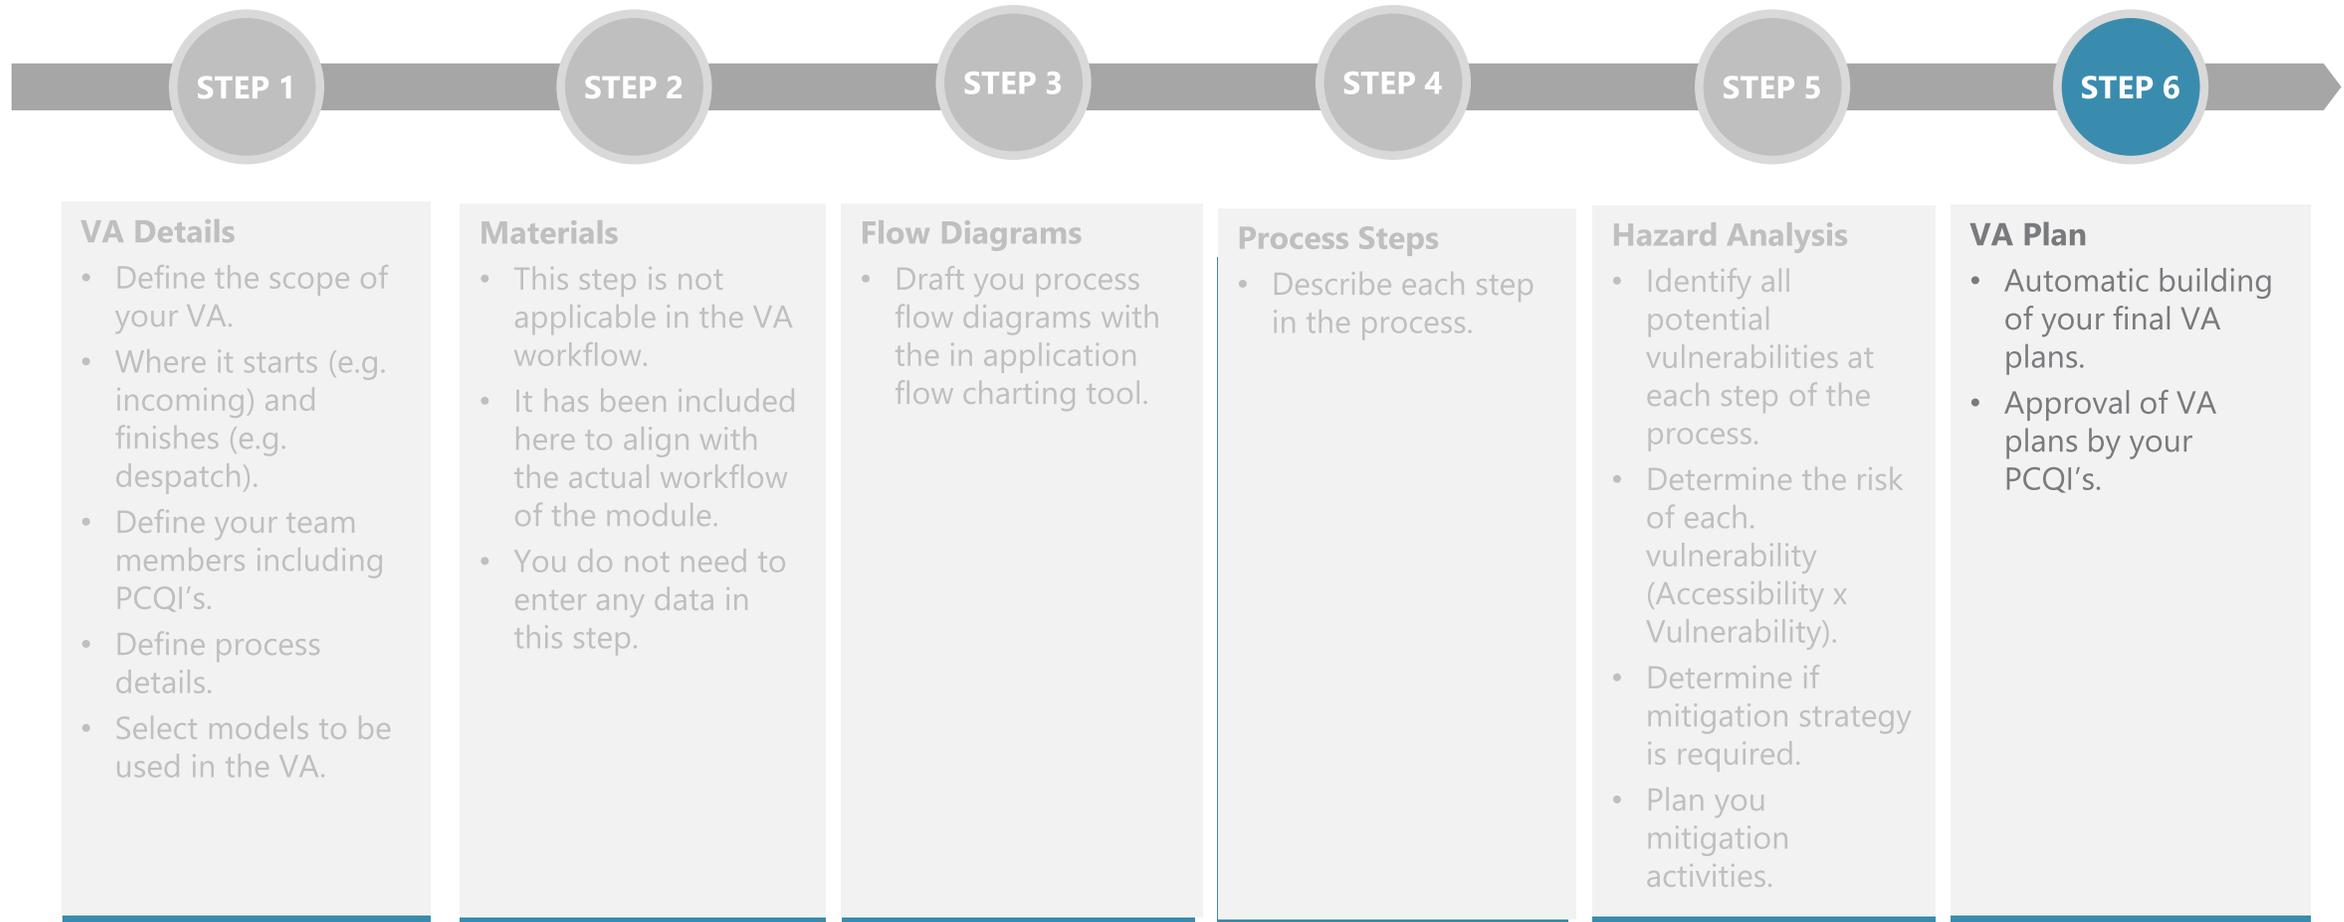

- Click **Risk > Food Safety Plan > Actions**
- Click the name of your VA plan in the table
- Click **Actions > Edit**
- Click **Hazard Analysis > 6- Chilled Storage > Add Hazard**
- Complete **Hazard Details**
- Complete **Risk Assessment**
- Complete **Decision Tree**
- Complete **Monitoring Details**
- Click **Save**

Steps in Building a VA in Safefood 360

The following details the steps to be followed in the Safefood 360 workflow for developing VA's.

STEP 6 :: Build VA – Plans

Plans Section. In this section the software pulls together all the relevant data from the previous steps to produce the VA. A PDF of the VA plan can also be generated using the **Actions** button.

Food Safety Plan - Focus Mitigation Strategies

| No. | Hazard | Control | Control Limit | How | Frequency | Responsible | Corrective Action | Record | Verification |
|---|---|---|--|---|------------------|--------------------------|--|------------------|--------------|
| #1 Drivers check-in & Ingredients check - (3 / Receiving (Ingredients)) | Quality / Other: Adulteration / Deliberate Contamination (Intentional contamination/adulteration) | Ingredients | All ingredients are sealed no evidence of tampering | Visual check | At each delivery | Intake/ Despatch Manager | Reject delivery if any evidence of tampering | Sample Procedure | Audit |
| #1 Drivers check-in & Ingredients check - (3 / Receiving (Ingredients)) | Quality / Other: Adulteration / Deliberate Contamination (Intentional contamination/adulteration) | Drivers | All drivers need to check-in | Drivers identification | At each delivery | Intake/ Despatch Manager | Reject delivery if any evidence of tampering | Sample Procedure | Audit |
| #2 Storage restricted access - (4 / Storage (Ingredients)) | Quality / Other: Adulteration / Deliberate Contamination (Intentional contamination/adulteration) | Question people's purpose in the warehouse. Make sure the workers know who has authorization and who doesn't. | Authorized personnel only | Use an alarm system to secure access to location, | At all times | Intake/ Despatch Manager | Remove unauthorized personnel. Review materials in the area for tampering. | Sample Procedure | Audits |
| #3 Drivers check-in & Raw materials check - (5 / Receiving (Raw Meat)) | Quality / Other: Adulteration / Deliberate Contamination (Intentional contamination/adulteration) | Raw materials | All Raw Materials are covered no evidence of tampering | Visual check | At each delivery | Intake/ Despatch Manager | Reject delivery if any evidence of tampering | Sample Procedure | Audits |
| #3 Drivers check-in & Raw materials check - (5 / Receiving (Raw Meat)) | Quality / Other: Adulteration / Deliberate Contamination (Intentional contamination/adulteration) | Drivers | All drivers need to check-in | Drivers identification | At each delivery | Intake/ Despatch Manager | Reject delivery if any evidence of tampering | Sample Procedure | Audits |
