

WORKFLOW

Agile Planning

Decision science algorithms that uncover your best road map options.

CONNECT people and data

EXPLORE insights and options

ADAPT to disruptors and new opportunities

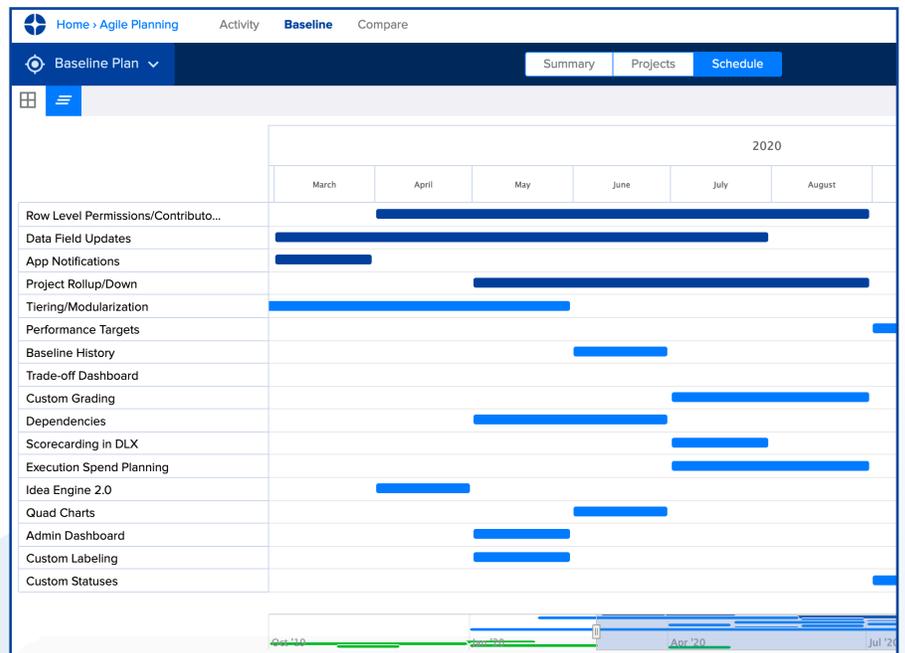

Strategic planning that delivers results. Make road maps that have the right Epics, at the right time, with the right resources available.

Deliver Faster

Achieve desired business outcomes by improving delivery forecasting and creating more predictable delivery schedules. Keep teams self driven and set up for success by easily seeing what's in progress, on deck next, and on the back burner.

Execute The Best Epics In The Right Order

Put some intelligent automation behind prioritizing and managing your product backlog, epics and sprints. Line up options to key drivers, goals, dependencies and available resources to make the biggest production impact.

Agile Planning

React Quickly To Market Needs And Demands

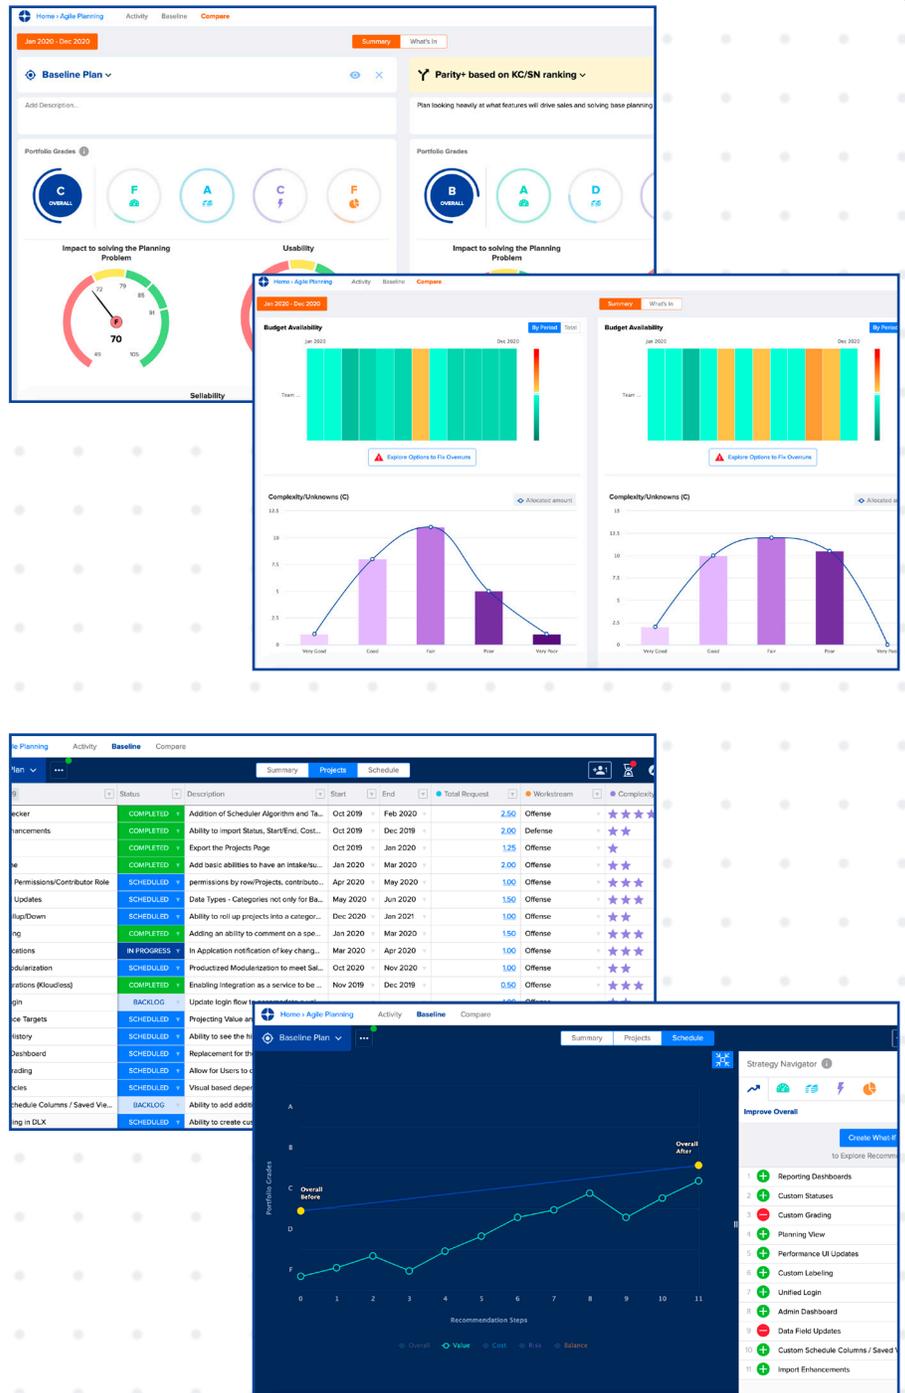

Don't lose momentum when priorities shift. Our algorithms not only flag problems, but recommend solutions. Automatically generate timely insights that immediately show the trade-offs and ripple effects of options you're comparing and exploring.

Maintain Flow And Focus With Flexibility

Stale data kills road maps. So does a plan with no strategy behind it. Our strategic decision making solutions complements your agile project management software at just the right phase in your internal assessment process. With custom APIs and easy to use interfaces, seamlessly move from one stage of your development process to the next.

Effortlessly Communicate And Align

Effectively show stakeholders progress and what's coming up. Quickly remind them of constraints and goal alignment. Defend investments, and justify resourcing needs.

**Spend less time managing data, hunting for options, and interpreting "insights".
Use an agile planning solution that frees up time for what really matters:
discussing and deciding what road map options will succeed.**
