

# UNISEA PERMIT TO WORK

UniSea Permit to Work is highly configurable and suitable for any vessel size or type, number of crew and operation. From simple tasks to comprehensive jobs that requires several control measures and workflow. With the Permit to Work module, UNISEA offers complete electronic planning tools. The module takes all safety aspects into consideration and gives the work team an overview of the relevant control barriers. It can be used as a standalone product together with your existing safety management system, or as an integrated part of the UniSea HSEQ suite.

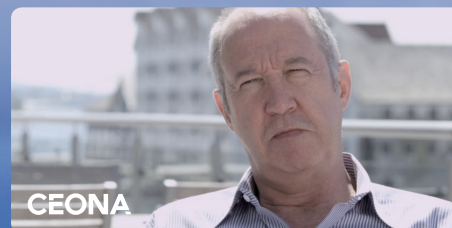

*"With the UniSea Permit to Work system we've seen increased use and compliance from all departments on board. From the office, I can check the status of all active permits on any vessel in our fleet. Which in fact gives me a remote audit capability of the permit system"*

**Geir Rasmussen**  
Marine Superintendent  
GC Rieber Shipping

*"The UniSea Permit to Work solution is a big improvement compared to our old paper based version. It simplifies the process and it increased the safety and awareness on board"*

**Bjarte Sylta**  
Captain  
GC Rieber Shipping

*"I've been a major driver in developing and implementing Permit systems in two major subsea construction companies. When I first saw the UniSea permit system I was quite impressed. It has the basic required functionality of a PTW process that we can use and it has that important element of being easy to implement and use"*

**Dave Munro**  
VP HSEQ  
CEONA
