

BDRSuite

v5.2 GA Release Notes

Release Date:18-APR-2022

Introduction

BDRSuite is a comprehensive Backup & DR solution designed to protect the business-critical data across your Virtual, Physical, Cloud Workloads, and SaaS Applications. Users can now configure backup for the diverse IT infrastructure from a single, easy-to-use & clutter-free UI. Download the latest version of the BDRSuite and get started with protecting your IT environment from data loss & disaster.

Note: Existing customers can go through the [Software Update Guide](#) to upgrade their BDRSuite servers to BDRSuite v5.2.

What's new in v5.1

New Features

Restore to Microsoft Azure

BDRSuite now allows restoring the VMware VMs, Hyper-V VMs, Windows Servers & Windows Workstations backups to Microsoft Azure. You can initiate the restore directly from your BDRSuite Backup Server or Offsite DR Server.

BDRSuite 360 Server

The BDRSuite 360 Server enables customers and service providers to monitor the backup activity of the BDRSuite Backup Servers deployed on their customer locations across multiple sites from a centralized web-based console.

Multitenancy

The multitenancy architecture of BDRSuite is redesigned to support advanced use cases of MSPs. You can now create multiple tenants and allocate one or more entities to each tenant. Every tenant will get multiple user roles to monitor and manage all the entities added under them.

Enhancements

- Improved application creation steps to add Microsoft 365 accounts to BDRSuite
- On-demand backup scheduling for Microsoft 365 backups
- Enhanced backup progress window for Microsoft 365 backups
- Enhanced backup report for Microsoft 365 backups
- Subfolder tree view for Microsoft 365 Mailbox
- Subfolder tree view for OneDrive

Backup & Disaster Recovery

Enhancements

- Subfolder tree view for Group OneDrive
- User-level backup report for Microsoft-365
- PST Download of Microsoft 365 now supports all Microsoft Outlook versions
- On-demand backup scheduling for Google Workspace backups
