N\$ 200.00 per month

See notes below why you need maintenance.

This will also include one change per month on your website

FULL PACKAGE

incl hosting fee, maintenance & once a month Facebook update

@ N\$ 350.00 per month

5 REASONS WHY WEBSITE MAINTENANCE IS IMPORTANT

1. Getting Hacked

Our top reason is the most evident one: security. Many people think it can't happen to them because their site is too small –why on earth would anyone want to hack it? While there's a variety of reasons your site could get hacked, such as mining Bitcoin, stealing bandwidth, drive by downloads, or Blackhat SEO spam campaigns, there's usually one common denominator: an older site. The likelihood of an older site getting hacked is a lot greater due to it having less secure coding and modules that are not up to date. All they have to do is click 'view page source' to see what Wordpress version you are running. It's that simple for the hackers to target outdated sites.

2. Risk of Damage to the Integrity of Your Site

The longer you wait, the more risk you have that you will encounter a problem when you finally update your site. The more often you update, the less likely problems will arise. Skipping updates (like 3.0 to 5.0), is a big no-no because eventually, some day you'll be forced into the new updates. And that one day, your risk is much higher because other modules will be out of date.

3. Wasted Time and Money

When you fail to make updates when they become available, but then need to go back and make them later, it turns into a much larger development and Q/A effort. The developer will need to spend much more time making the updates because the impact to the site is greater due to the increased number of updates and module changes over time. More time is also needed for QA because of the increased functionality on the site affected. Implementing the update when it becomes available provides you with the latest and greatest functionality right away, overall improving your site.

4. Unusable Features & Poor User Experience

Site updates provide new features and functionality to your website. Why wouldn't you want new features for your site? The sooner you implement the update, the sooner you get that new functionality. Think of why you always are updating your phone. That is, if you're using an older version, your overall experience is a lot different and often slower than someone using the latest version.

5. Decreased Speed

There's a reason for new releases. Each release comes with various performance improvements that make your website more efficient. When you visit a site, and it takes too long to load – do you get impatient and navigate off? Website performance goes hand-in-hand with conversions and site results.

Facebook

ONCE OFF FEE

Facebook page design @ N\$ 700.00

MONTHLY FEE

Update once a month @ N\$ 100.00

Twice a month @ N\$ 200.00

Once a week @ N\$ 400.00

Photography

For all your website and Facebook updates. I can do any type of photography.
