

Screening Questionnaire for Human Subjects Participants

1. A designated research member should call each potential participant at least 24 hours prior to the scheduled appointment for pre-screening and then screen the participant again upon arrival to the research visit. The research member must obtain verbal consent before asking the following questions. Names and responses of screened individuals must be maintained in a secure location. If the research involves minors, the researcher should ask the parent/legal guardian to respond to the questions. The parent/legal guardian will respond to questions for themselves and on behalf of the minor.
 - a. In the past 14 days, have you traveled outside of the United States?
 - b. In the past 14 days, have you traveled out of states? Where?
 - c. In the past 14 days, have you traveled on a cruise ship?
 - d. In the past 14 days, have you traveled on an airplane?
 - e. Please indicate if you have had any of the following symptoms in the past 14 days. Please indicate yes only if those symptoms have not been diagnosed to be something other than COVID-19 (e.g. the flu) or cannot be attributed to a chronic condition (such as a chronic cough due to smoking)
 - Fever or chills
 - Cough
 - Shortness of breath or difficulty breathing
 - Fatigue
 - Muscle or body aches
 - Headache
 - New loss of taste or smell
 - Sore throat
 - Congestion or runny nose
 - Nausea or vomiting
 - Diarrhea
 - f. In the past 14 days, have you lived with, visited, cared for, or been in a room for more than 15 minutes with someone who is under investigation for or has been confirmed for COVID-19?
 - g. In the past 14 days, have you visited or worked in a retirement home/assisted living facility?
 - h. Have you been confirmed with COVID-19?
 - If so, provide the following information:
 1. Date of Positive Test:
 2. Date of Negative Test:
 3. Documentation confirming negative test results.

If the answer to questions a-g is “yes”, the researcher should dismiss the participant and reschedule the visit after a 14 day lapse with no symptoms.

If the answer to question h is “yes” the participant must provide documentation of negative test results before proceeding with research participation.

If the answer to all questions are “no”, proceed with scheduling their research participation.

2. When a participant is present for a visit, a research member should repeat the questions about symptoms and exposure that might have occurred since the pre-screening conversation. If the research involves minors, the researcher should ask the parent/legal guardian to respond to the questions. The parent/legal guardian will respond to questions for themselves and on behalf of the minor.
