

December 21, 2021

Hello neighbor,

The City of Mission Hills is planning infrastructure upgrades along Tomahawk Road. To accommodate this project, Google Fiber must relocate our existing facilities. Of course, we're working directly with the City of Mission Hills to make sure we follow all local guidance and construction requirements.

Crews contracted on behalf of Google Fiber will be relocating fiber optic cabling that is currently in the roadways near the curb lines. You will get advance notice of the work from a card placed on or near your front door.

We know this work may cause some inconvenience. We will work to minimize disruption as much as possible.

What to expect:

- Marks on the ground: Residents will see various colors of paint, flags or other markings on the ground marking where utilities are located. These are required for minimizing conflicts
- In-ground box installation: Minimal installation of small underground fiber optic boxes in the right of way in front of homes.
- Orange construction fencing: Fencing will be installed to secure all open excavation. Once the fencing is removed, the area will be made flat and sod will be placed when appropriate and as weather permits.

For Google Fiber construction-related questions or concerns, including restoration and repair matters, please call our 24/7 construction line, 1-877-454-6959. For information related to internet service, please contact Google Fiber at 844-36-FIBER or visit www.fiber.google.com. Please contact Mission Hills city government or the appropriate utility company for concerns not related to Google Fiber.

Sincerely,

The Kansas City Google Fiber Team
